"Antenna advice?" Oh, good grief...

I'd better message Jack Stone over on Antennex. "Yellow Alert" for
that fine group of experimenters.

I wonder if Dee will have admonishments on guy wires? :-)

The FACT that he is compensating himself "some amount" isn't the problem. It's
the AMOUNT of compensation and the fact that he REFUSES to disclose that to the
public that is the problem.

I am certain that they can, but I haven't seen those separated out in a public
statement, so I can't use them to compare.

I do not agree that what he is doing is legal. He has not disclosed when asked and non-profits MUST disclose.

The amount I used is also about the same for business use customers per line. Look it up in the phone book. The difference is less than $2/month.

Here's why I doubt his honesty: Some years ago, he reported on a conflict between a Los Angeles repeater that was put up on the frequency pair of 145.460 (output) and a Mexican repeater on the same pair. I witnessed him personally talk to some Mexicans about this at a local amateur radio convention aboard the Queen Mary. However, at no point did he even ATTEMPT to contact the owners of the L.A. repeater (whom I personally know and still see one of them once per month as he is a volunteer examiner in the same testing team as I am in). BP reported in his ARN, making several statements about this situation that were outright false. BTW, the trustee had a listed home telephone number that is even today still in service (as the number to call about testing). As a true news reporter, one is supposed to make an UNBIASED report, seeking out BOTH sides of a dispute; he did not do that. It would be different if he sought out one side of the conflict and that party declined to go "on the record" - but such is not the case. Supposedly, BP also works for Fox News, so he should know how to do proper journalism even if he isn't one of their reporters.

I can list several factual points that were incorrectly reported about this incident, but I don't see the need. The list doesn't aid my point.

From that point onward, it is clear that he is a biased and untrustworty reporter who is NOT INTERESTED IN THE TRUTH. Combine that with the only conclusion that can be made about the funding and expenditure of ARN and his failure to disclose such when asked and required to by law - that he is putting the majority of contributions into his own pocket, and you should get what I reasonably conclude: That he is a lying weasel who is bilking the [amateur

radio] public out of their money by using a alleged non-profit as a front.

I could probably get more truthful information about amateur radio from "The National Enquirer" than I could from Bill Pasternak.

Of course: That's why WHEN the complaint against him goes in, it will be well documented. There is no recourse against a well-founded complaint (even if it should be proven wrong).

> >Additionally, there is no legitimate purpose for him to post his entire

> is absolutely pertinent to this forum.

You forget that the newsgroup charter FORBIDS its posting. Periodic bulletins require permission - and he has permission to post only on "rec.radio.info" and "rec.radio.amateur.misc", not to "rec.radio.amateur.policy." Furthermore, he KNOWS this because he is the one who sought permission to post to the other groups in the first place. It is SPAM because is it a regular posting in violation of group policy referring to a web site.

> If you don't want to read it, skip over it. When I open my newsreader I

There is alot of spam that is not easily traceable. This one, ARN, is. That's why I have pursued it.

> Good luck making your case. If I were asked to render an opinion on the
> matter to a federal investigator, you know how I'd vote.

As one of those he has scammed, I bet.

Where does it say that it may NOT be automatically retransmitted? A repeater MAY be under automatic control (.205(d)), these signals CAN BE RETRANSMITTED (.113(e)), and there is no rule that specifies that a repeater cannot be the station doing the retransmission. There very well may be other conditions on the retransmission, but automatically isn't among the restrictions. [On a continuous basis is among the restrictions; e.g.]

> > > Neither my $150 2 meter rig nor my $350 V/UHF rig have SAME function in

> decode the SAME codes.

The WX-200 unit that the original forum was about is a piece of equipment that is meant to be interfaced to an amateur repeater that listens to the WX station and DOES decode SAME codes. Amber Alerts are among the non-weather events that can be transmitted over the WX stations with a SAME code of "CAE" - and that is a message conveying a direct threat to a [specific] life.

The FCC response indicates that there is no problem with the WEATHER RELATED alerts, but apparently states that non-weather related messages that still represent content regarding a threat to life or property are a violation, even considering 47 CFR 97.403.

I don't see how ANYTHING can be more important that someone's life. Apparently, William Cross at the FCC thinks that there is, but doesn't explain himself.

> R E A D T H E R E G U L A T I O N, D I E T E R ! ! ! ! ! !

I have. That's the COMMON SENSE conclusion one gets from the plain reading of the regulations in toto: That non-weather related transmissions that communicate a [immediate] threat to life or property are provided for and are LEGAL under .403, so they don't need to be included under .113(e).

I don't see such: The word "automatic" is missing from the text.

>
> And without the intervention of a control operator (manual
> operation), how do you determine which transmissions are in compliance
> with Part 97...?!?!

If I were to answer that question the way you posed it, repeater transmissions
would be themselves a violation - because there could be no retransmission
without manual operation. Obviously, they are not a violation - because they
are allowed to be automatically controlled.

All that is required is that there be a means of intervention available to a
control operator that can be used the moment a violation is detected to prevent
its continuance, JUST LIKE WITH ANY REPEATER OPERATION that is automatically
controlled.

Why is that not obvious to you? Are you really that stupid?

> > As for automatic, the issue arose with regard to a device that would be
> > interfaced to an amateur repeater, and repeaters MAY BE AUTOMATICALLY

>
> You're trying to twist the regulation to fit YOUR interpretation.

Wrong. Read the identification of the ORIGINAL CONTEXT. The original point
was specifically with regard to the interfacing of a "CAT Automation" WX-200

unit to an amateur repeater.

> You can try that excuse if Riley sends you a QSL, but the sting

> But FCC rules DO specify what we can "retransmit" via our
> stations. Like I said...you go right ahead and push the envelope on
> this one. I think you'll get your wrist slapped.

Yes, the rules do say what we can retransmit:

.113(e) Weather related broadcasts originating from U.S. Government stations
... if not on a continuous basis ... and [paraphrased] for the exclusive use of
amateur stations.

.403 NO PROVISION OF THESE RULES PREVENTS the use by an amateur station OF
ANY MEANS OF RADIO COMMUNICATION AT ITS DISPOSAL to provide essential
communication needs IN CONNECTION WITH THE IMMEDIATE SAFETY OF HUMAN LIFE and
immediate protection of property when normal communication systems are not
available.

There is NO "normal communication system" designed to reach all people.
Neither is the "EAS" a system for normal use. The only non-weather related
messages over WX receivers would be EAS messages, except for the weekly test
message, that would relate either directly to the safety of human life and/or
property.

Therefore, the content that can come over the WX receiver that is not permitted
by .113 is permitted by .403. So, where's the violation, assuming all other
aspects of the two rules are met?

>
> THAT is NOT "automatic".

Being occasional and being automatic have nothing to do with each other.
Something can be BOTH: E.g. The EAS SAME weekly test message occurs for 15
seconds once per week. It is certainly "occasional" because its period isn't
even a measurable percentage of weekly time, and what the repeater does when it
receives the message can be fully automatic, such as having its controller
speak, "EAS Weekly test message received" (then identifying).

Explain why that example isn't occasional nor automatic?

It's not my definition. I didn't write the newsgroup charter, nor did I vote
on founding this group. However, aren't you the hyprocrite? You bitch about
this stuff violating the amateur rules but have no problem with BP's violation
of the newsgroup policy.

The fact that it CAN is all that the amateur rules need address.

>
> And if you can hear it, what's the purpose of retransmitting it?

Why ask me? I didn't lobby to have the weather stuff added to .113(e).
However, it is there, and thus there must have been some reason why the FCC
chose or was persuaded to add it. Whether that reason makes sense I cannot
say.

> > > I've been in Mojave, up to Bishop and down in Imperial County and was

> Right now automatic rebroadcast of NWS transmissions is NOT legal.

Your citation?

What I see in .113(e) is that CONTINUOUS retransmission of NWS signals are not
legal, but occasional retransmission for use by amateur stations IS permitted.
The rule makes NO reference to the type of control - automatic or manual.

> that which isn't there.

One could retransmit from a neighboring area. (Certainly, that does meet the "communications failure" part of .403 in the amateur rules. All one needs to add is an actual emergency - beyond transmitter failure.)

Aside:
When was the last time you listened for NWS transmissions? In the past week, I have, and I found signals on five of the seven assigned frequencies.

For me, in Los Angeles County:
162.400 KEC62 San Diego (Inland)
.425 WNG57 San Diego (Coastal)
.450 WWG21 Santa Ana
.525 WNG58 Catalina Island (LA Coastal)
.550 KWO37 Mount Wilson (LA Inland)

The two channels I could not hear originate from Santa Barbara and Victorville. Some of the signals would not be heard under all conditions. Only three of them are strong enough to be heard in bad weather (i.e. rain/snow).

The NWS has maps showing where their transmitters are. For example, in Kansas, they are laid out in a repeating cellular pattern, so for those counties that don't have a transmitter themselves, there are usually 2 or 3 signals from neighboring counties that can be heard that will overlap the counties lacking their own. The overlapping transmitters would probably ALL carry messages for the overlapped counties, even if they only covered part of it, and especially if one failed.

Back to the topic:

Why is this in the rules if as K6YZ thinks, no retransmission is EVER permitted?

What you describe *is* a direct conversion receiver.
>
> I think most hams will know what a "superhet" receiver is. How
> many know what a "het" receiver is? :-)

I do.

Nice try avoiding the main point. But you're still wrong about the date of the first voice radio transmission. It was 1900, not 1906. You brought it up.

You "studied the test" - literally! Which is certainly effective, and legal.

But do you think you learned as much as if you didn't have the exact Q&A
available?

This isn't a criticism of you or Mike or anyone who takes the tests today. It's
just a point about the testing methods used. Not that they're going to change
any time soon.

>> >>>Continued until I scored 100 percent pretty consistently.

I'm not surprised! It's only 50 questions anyway!

Once in a while I take an online practice test just for grins. Usually I don't
use scratch paper or a calculator, just to make it more of a sporting course.
Ten minutes is about my speed, too, unless I push it.

I think that depends on the person. Some folks can, others can't, etc.

>Additionally, rules and regs can and do change
>as we all know...so band edges, especially mode restrictions within a
>specific band (e.g. novice sub-bands) change over time.

Yes - and that's one reason to take online practice tests.

In fact, it could be argued that having a published Q&A and online practice
tests makes it *easier* for *already licensed* hams to keep up with the
changes.

>> >>>>*If* you only care about right answers rather than understanding.

>True, but No similar "time in grade" applies to ham licensing.

It's not just time in grade but actual supervised work experience. Back in the
old days of a 2 year wait for Extra, a ham could just toss the General license
in a drawer and do nothing for 2 years, yet the "experience" would still count.

We aren't likely to see such experience requirements reinstated either, IMHO.

Won't matter. When Len hits 20 years in the amateur service, these
guys will have 50. Len will still be "wet behind the ears." The
license just doesn't matter with these guys - it's merely their excuse
to act like idiots.

Robert, he doesn't WANT the credibility.

He enjoys self-humiliation. Also, "get(ting) the !@#$ license" would mean
that he'd have to admit that he's just a mere mortal like all the rest of us,
and he could never live with that. He's wasted his life on self grandizing
himself so much, that anything else might make him look like a "real guy".

No...Lennie will never "get the !@#$ license". He just doesn't have the
character or class to do it.

I've had some interesting "back channel" conversations with people who
should know what's going on, and so far these people don't know who Dieter
Stussy is, nor why he's running off at the mouth about Bill Pasternak.

>> > The "ARRL news" is
>> > not comparable because it's part of a larger organization that does other
>> > things and we don't have the requisite information to separate just the

>>
>> That's an excuse, Dieter. They certainly CAN seperate those
>> expenses.
>
>I am certain that they can, but I haven't seen those separated out in a
>public
>statement, so I can't use them to compare.

I am willing to be the ARRL, worth figures in seven or eight digits,
spends a bit more than $1000 a month in it's "news" gathering and distribution.

And I bet the folks a the League, also a 501(c)(3) organization, get
compensated rather adequately.

>> So...MY question is who in the heck is Dieter Stussy to determine

>> thing...?!?!
>
>A person who is a member of the PUBLIC who is questioning and HAS THE RIGHT
>TO
>QUESTION a charity into its reasonableness, else ask the IRS to revoke its
>non-profit status.

I didn't question your "right" to question, Dieter.

I asked who were YOU to decide WHAT is fair and reasonable. What credentials make YOU qualified to suggest that you know what Bill ought to be bringing in, keeping, etc...

>> But so far...even by your own admission, what Bill's doing is
>> legal and your only "beef" is that he's not doing it for free.
>
>I do not agree that what he is doing is legal. He has not disclosed when
>asked
>and non-profits MUST disclose.

Then why hasn't the IRS doen something about it?

My take on this is that he IS "disclos(ing)" what the IRS wants to see, and you're just not happy with what YOU see...Ever since Jim and Tammy Bakker screwed over thier "congregation", the IRS has been very acutely aware of what goes on with "non-profits".

>> A "flat rate" number at $29 might be for residential service, but
>> certainly not for a business, even a charitable one.
>
>The amount I used is also about the same for business use customers per line.
>Look it up in the phone book. The difference is less than $2/month.

"The book" is not the same in all communities, Dieter.

>> Then stop your incessant whining and refer it to the Attorney
>> General's office.
>
>You asked me to explain my position. My "whining" is at your request.
>...Also, who's to say that I haven't referred him to the state's AG or to the
>IRS (to challenge his non-profit status)?

No...your "whining" is at your own initiation, otherwise we wouldn't be having these exchanges.

And like I said about your "complaints" to the AG or IRS...It may very well backfire on you. As a matter of fact, I bet on it.

>This all started by my comments about his posts being SPAM on this group.
>You
>asked why. I'd say that you got more than what you asked for.

Nope...I'd say that YOU were the one who got more than they bargained for.

Sorry you don't agree, but I think you're going to pursue this and find yourself getting your nose rubbbed in it.

>> If you're not sufficiently confident that you can make a case to
>> him that BP is doing something illegal, then chances are he's NOT
>> doing anything illegal.
>
>Or he is hiding his fraud on the public extremely well. Remember that the

Sure there is.

OJ Simpson was found guilty in a CRIMINAL court of wrongdoing but was
found guilty in a civil court.

And in a CIVIL court is where you are likely to find yourself. There is
more than adequate "evidence" that Bill Pasternak is doing exactly what he said
he'd do, has done it for a veeeery long time, and does it well.

You go right ahead with your "complaint". I think the backlash will keep
you stinging for a very long time.

>> The content IS relevent to Amateur Radio practice AND policies,

>
>There is alot of spam that is not easily traceable. This one, ARN, is.
>That's
>why I have pursued it.

No...You've "pursued" it because you don't like Bill Pasternak.

As I've said, if you persue it any farther and Bill decides to defend
himself, your own words in this forum will come back to haunt you.

>> Good luck making your case. If I were asked to render an opinion on
>the
>> matter to a federal investigator, you know how I'd vote.
>
>As one of those he has scammed, I bet.

I haven't been "scammed", Dieter.

I've sent in a few bucks over the years, but I bet less than $30 in all.

I still get to read ARN...It's still rebroadcast over local repeaters and
I can read it here.

I'd say it was $30 well spent. If Bill spent part of it having a cold one
after having gotten the current week's edition out, then that's fine by me.

>a message conveying a direct threat to a [specific] life.

OK, Dieter...We can use that rationale to put all sorts of interfaces on
Amateur Repeaters.

Let's put an automatic alarm on the repeater anytime an aircraft ELT
squawks.

We can also inlcude EPIRB's.

Then we'll also put a receiver to pick up local "Medic Alert" pendants for
the elderly who have fallen at home.

We can then include an alarm for "LOW-JAC" systems...Anytime someone's
stolen HUMMER is within earshot of the repreater we'll get an alarm for that.

While we're at it, let's demand a smoke alarm in microwaves that tell us
when popcorn is about to go critical mass, and we can then shock our neighbors
with how fast we called 9-1-1.

We can also put FRS/GMRS monitors on our Amateur repeaters so any time
one of then transmits a LITZ tone, we get the beep.

You getting the picture of where things go if you open that
floodgate...?!?!

>The FCC response indicates that there is no problem with the WEATHER RELATED
>alerts, but apparently states that non-weather related messages that still
>represent content regarding a threat to life or property are a violation,
>even
>considering 47 CFR 97.403.

More people are killed by bad weather every year other than auto accidents. It can drop in on you even if you're in your own home watching re-runs of "Twister"...

>I don't see how ANYTHING can be more important that someone's life.
>Apparently, William Cross at the FCC thinks that there is, but doesn't
>explain
>himself.

I think the above explained it perfectly well.

You want to add an "Amber Alert" to the repeater...?!?! Do it with a controller card that sends "AE" so those who want to get involved and hear the broadcast can tune in.

>> No, I leave it to YOU to get the rules ammended to what YOU want.
>> Right now automatic rebroadcast of NWS transmissions is NOT legal.
>
>Your citation?

How are you going to meet the criteria of "occassional retransmission" otherwise, Dieter?

A control operator needs to hear it, decide it's valid, then put it on the air.

Otherwise you just have a system that breaks in whenever IT wants to, regardless of what traffic may already be on there.

>What I see in .113(e) is that CONTINUOUS retransmission of NWS signals are
>not
>legal, but occasional retransmission for use by amateur stations IS
>permitted.
>The rule makes NO reference to the type of control - automatic or manual.

I reiterate...HOW do you meet the prerequisite of "occassional" if the repeater is set to retansmit any SAME alert "automatically"...????

986. Question Pool vs Book Larnin'

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-19 15:00:09 UTC
From: Mike Coslo <mjc5remove@psu.edu>
Message-ID: <40FBE1F9.7030401@psu.edu>
Source record: 94661

I question how the question pool is so much worse of a learning tool
than say a book.

Here's something to try.

Let us take a website:

http://www.ewh.ieee.org/reg/7/millennium/radio/radio_radioscientist.html

This is IEEE's write-up on Reginald Fessenden.

Let's take a situation where there is a question on the first date of
transmitted sound.

Quoting from the page:

> Professor Kintner, who was working for Fessenden at that time,
>designed an interrupter to give 10,000 breaks a second, and this
>interrupter was built by Brashear, an optician. The interrupter was
>delivered in January or February 1900, but experiments were not
>conducted until the fall of that year. To modulate his transmitter,
>he inserted a carbon microphone directly in series with the antenna
>lead. After many unsuccessful tries, transmission of speech over a
>distance of 1.5 km was finally achieved on 23 December 1900, between
>15-metre masts located at Cobb Island, Maryland.

A couple paragraphs later....

> Fessenden's greatest radio communications successes happened in 1906.
>On 10 January, two-way transatlantic telegraphic communication
>was achieved -- another first ï¿½ between Brant Rock, Massachusetts,
>and Macrihanish, Scotland. James C. Armor, Fessenden's chief assistant,
>was the operator at Macrihanish, and Fessenden himself was the operator
>at Brant Rock.

End quote

There are some questions that may be easily taken from these paragraphs.

When was the date of the first successful voice transmission?

A. July 15, 1905

B. December 1, 1899

C. December 23, 1900

D. January 10, 1906

Some place you can look up the answer = C

What was the distance of the first transmission?

A. 1.5 Kilometers

B. 1.5 miles

C. Transatlantic

D. 5 meters

Some place you can look up the answer = A

Okay. So which is the superior method?

If I were to voice my preferences, I would just as soon read a nice story about Mr. Fessenden than a dry question pool. But functionally the two are identical.

Should the answers to the question pool be some deep hidden tome, not accessible to the public? As much as the two methods are pretty much the same, I would only agree with that if no one was allowed to study *any* reference material *at all*. Reading the two paragraphs gives you the *exact* same answers as looking at a question pool.

Finally, I deliberately included this particular material and this specific question because of a current disagreement between to members of the group.

Whereas probably most of us would answer question 1 with C, and question 2 with A, there is at least one here that would answer the questions with D and C.

What?! how can this be? First is interpretation. Regardless of the reasons that some may have for a different answer, there has to be a reference somewhere. And the nice thing about the question pool is that you can see the answer that is wanted. Then the person taking the test can decide whether they want to put in the desired answer, purposely put in an answer that will be marked wrong, or argue with the test giver.

So NOT having a open question pool is going to cause trouble.

You and Lennie are the masters of your own fates. As long as you keep making stupid, obvioulsy flawed, misleading or mistruthful posts, there will be people who will make a point of pointing it out to you and everyone else.

Both of you tell tales, make assinine accusations and take liberties with civility that any gradeschooler can see through, THEN you get indignant when your own words and actions get fed back to you.

Sucks to BE you, Brain.

Before you take liberties with whom YOU call "idiots", you had better review some of your own newsgroup misadventures. I wouldn't want them on my track record...It's quite humiliating.

Care to reprise the baby-babble routine again...?!?!

A different point altogether, Jim! A person will learn MUCH more by
reading good reference material. Just as an example from the Question
pool vs boo larnin' thread I just started, I learned that Fessenden
received an optical interrupter made by a fellow named Brashear. Now
there is a piece of synchronicity! Brashear was a telescope maker of
great renown at that time. I didn't see that tidbit in any of the
history of telescopes.

But that isn't what they are trying to teach us in electronics. somone
somwhere has to decide what question to ask on the test.

> This isn't a criticism of you or Mike or anyone who takes the tests today. It's

Fessenden was a commercial success. In 1915 he perfected his device to measure ocean depths, the "fathometer" which gave him finicial security for the rest of his life. In 1928 he won a settlement for $500,000 (a LOT of money in 1928) for his patent lawsuits.

No "interpretation" is allowed in here, Mike.

Public disclosure of the amateur radio question pool (with answers)
has been deemed, variously, "dumbing down," "cheating," and
(probably) "unpatriotic." It is an evil that must be eradicated. :-)

All things on the amateur test must be kept the way it was for the
olde fartes...closed book, prim, proper, very very formal. The rest of
their life depends on the test outcome. It's the most important thing
in their lives and MUST be treated that way!

Might be fun to conjecture on your try at a real discussion. It would
meet with the usual hate-spew of certain creatures in here, though,
and quickly evaporate into the bit-bucket.

I've taken a few tests, both open-book and closed-book, neither of
which conditions bother me. The biggest "test" I've ever taken is
the continuing "test" of working for a living in electronics design.
Some of the time that work couldn't be either open- or closed-book;
no book existed to yield the "proper answers." :-)

> More excuses.

Yes, more excuses for the olde-tyme hamme raddio licensees to vent their personal frustrations by finding faults (that done exist) in others who have far more experience than they do in radio.

Right now I've got 51 years of HF radio "experience." That's longer than you or many others have existed. <shrug>

Apparently, to the hamateur lifestylers, that "doesn't count." It wasn't done with the Blessed and Sacred Amateur License, under "official" league rules, done with absolutely right and proper protocol, all marching in the ranks carrying the Newingtonian banner held high.

U.S. amateur radio is propagandized as a fun activity. From the way some insist on turning it into an Armed Militia or corps-thinking cannon fodder, that's not a good picture to paint. But, it IS a nice paint-by-numbers kit, all designed for easy painting by others...which they dive into, thinking they come up with a finished product equivalent to the Old Masters. :-)

Rant on, gunnery nurse. Make sure your rant is paid on time. :-)

Not a good reason "for the service!" :-)

>It ain't that hard.

I'm aware of that. So is anyone in the public who cares to look.

:-)

>Hell even 5wpm.

So, learning a useless skill is considered "important?"

I've never had to learn or use any manual telegraphy in 51 years of
actual communicating on HF.

Morse code skill is an anachronism. Only amateurs use it with any
regularity and then those are only a few amateurs, a minority.

>I did it and I'm no good at sort of "motor skill" kind of thing.

Not a good reason for me to waste my time trying to re-enact
the past.

>Then get on the air some.

Been there, done that, from LF on up to microwaves.

Did it earlier this year using an SGC SG-2020 on HF. :-)
[also late last year, same rig...both times very legal!]

>Then you can speak with some creditability
>here and other forums on ham radio.

Impossible! "Those without an amateur license have zero-point-
zero experience, don't know nuthin, etc., etc., etc., etc." :-)

Ham radio works by different principles than all other radios.
That's what I'm told. I don't believe them, but lots of hams do.

As far as morseodism is concerned, I'm an atheist. I don't
worship at the Church of St. Hiram. Put away your collection
plate and Him books.

Look to yourself and contemporaries. Improve your own standing within the "amateur community." Foster more myths and legends of the Power of Morse, use either a Wayback or Tyme Mashine and concentrate on 80 to 100 years ago happenings, idolize the Pioneers of Hamateur Raddio (well over all others in radio), and treasure the icon of icons, the amateur license certificate. Don't bother to look towards the future...except to note the next ham club date and time so you can continue to Spread The Word.

Live your proper lifestyle of amateurism. Be an ascetic. Toss around more acetic acid. [stop bath in darkrooms...fitting]

"Ohm, mane padme Ohm..."

BTW, it's not a DAMN license. :-)

It's an official federal merit badge. Makes you invincible? :-)

See, they are doing it the wrong way. this should be done like some
college professors do - which is to write a book, then make that book
the subject of their classes. So if you take the class, you have to buy
the book!

Then again, I wonder if giving the name of a reference book would be
cheating?

Maybe take the prospective ham out in the woods, miles from nowhere for
a year or two, so they can't look things up or read about the test. then
on test day, put 'em in the test room and let 'em have a go at it.

THEN, those that pass will truly *know* the material. 8^)

Even open book tests work. I've taken them not knowing anything about a subject, but after the test I do.

True that he won't have the 50 years experience, but even just a few
weeks of operating time on the bands will dry out behind his ears...

Of course it's up to him to actually go out and do it...

But at least with a test where the questions are not known in advance,
even in an "open book" test, the person being tested (a) still has to already
know enough about the subject to know WHERE to look, and (b) is going to
assimilate some of the material in the research phase of looking through the
book.

I used open book testing when teaching Avionics in the USMC with great
effectiveness. Not only did the students have a very high aggregate test
score, but it reinforced thier skills in using the maintenance manuals.

I did not know that! Thanks, JJ!

I guess that means Len was wrong - *again*.

So RAF was not only a genius but also a commercial success with at least some
of his inventions.

Sunuvagun!

I'll cut Len a break in that if he does go for testing and
fails, he doesn't have to tell anyone. But he has to
go to the next session and try again. Only when he passes
does he have to tell us. And he doesn't have to get his
extra in one sitting...

Len isn't a licensed radio amateur. Ergo, he has no excuse for acting
like an idiot. When and if Leonard ever has twenty years as an amateur
radio under his belt, I'll treat him to a package of adult-sized
diapers.

>extra in one sitting...

Yes I do. I HAVE to get an "extra out of the box!"

Once posted in here, such a thing will hang on for the LIFE
of the sayer. It's like Posting Bans!

I haven't taken my first amateur test yet. [took my last
commercial operator's test in front of the FCC in Chicago in
1956].

Maybe I'm not up to it? After all, it's such a Ruff and Tuff
session and I'm told there's a wash-out rate that is high.
Will there be any blood shed? Injuries during the test? Do
the VEC have standard obstacle courses or they individual?

Will my amateur service uniform be fitted right there if I pass?
Will there be a parade ceremony for all who pass later? Can
I get a commemorative photo taken if I pass? Can my wife
attend the ceremony? Friends? Neighbors?

Is there a clergyman there at the test session for counseling
all who fail? [hope it's a good Lutheran pastor] Will there be
a weapons search before a test session? Can't have anyone
despondent failure offing themselves.

BIG EVENT! Most important day of anyone's life!

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!

Sorry, Bobbie, that got away again... :-)

Open bands, old timer, wipe the back of those very wet ears...

Absolutely. There is only ONE reference: ARRL Handbook. :-)

Mike, in this forum, you can't ask discussion questions of the
normal sort. [it would be nice except for all the yell-yells in here]

However the modern U.S. amateur radio testing is done (or the U.S.
commercial operator license testing), if it wasn't by the old system
prior to question pools, the yell-yell answer is "it IS cheating." :-)

> Maybe take the prospective ham out in the woods, miles from nowhere for

That's the standard military survival school training kind of thing.

I really doubt there is any sort of "need" for that kind of exaggerated
proof of performance. Amateur radio is, by and large, just a hobby.

>> All things on the amateur test must be kept the way it was for the

ALL learning begins with memorization. Few understand that.

Memorization skills are necessary to retain knowledge in order to
apply it later.

To venture into an analogy on licensing, taking a behind-the-wheel
driving test for nearly any state driver's license doesn't allow any
open-book answering. Inspector gets rather perturbed if one looks
in a book while driving. :-)

The "wet behind the ears" comment was attributable to your Padawan scumbag, Brian Burke. Robert was expressing confidence in your abilites to be an effective Amateur operator.

And I see you still can't being yourself to treat another person with the same respect he's treated you with. Just have to find some shard you can use to cut into someone without any thought as to the consequences.

In this case the "consequence" was that YOU again proved that you ARE the lying, uncivil scumbag I have asserted you to be.

S C U M B A G. Nickle says Mrs Lennie sleeps with a smear of Ben-Gay under her nose to let her get over the stench.

Yes, but why fret?

The reason we won't see them is that it adds to the admin workload, because there would be no multistep upgrades. *Every* upgrade would be a VE visit and an FCC transaction.

>
> Some place you can look up the answer = A
>
>Okay. So which is the superior method?

Depends what you mean by "superior".

If someone who knows nothing about Fessenden discovers that there are only two Fessenden questions in the pool, he/she need only learn two simple facts ("first voice transmission date = 1900" and "first voice transmission distance = 1.5 km = about 1 mile".

But if a question pool is not available, the person has to learn a whole lot more because there's no telling what Fessenden questions, or how many, will be on the test.

>If I were to voice my preferences, I would just as soon read a nice
>story about Mr. Fessenden than a dry question pool. But functionally the
>two are identical.

Not really. Heck, I could write at least a dozen different questions from those paragraphs.
>
>Should the answers to the question pool be some deep hidden tome, not
>accessible to the public?

Nope.

The *exact questions* should be secret! But that's not going to happen any time soon, so why get worked up over it?

>As much as the two methods are pretty much the
>same, I would only agree with that if no one was allowed to study *any*
>reference material *at all*. Reading the two paragraphs gives you the
>*exact* same answers as looking at a question pool.

Not really.

If we know the exact Q&A in this hypothetical question pool, the whole story
that started out like this:

>> Professor Kintner, who was working for Fessenden at that time,
>>designed an interrupter to give 10,000 breaks a second, and this
>>interrupter was built by Brashear, an optician. The interrupter was
>>delivered in January or February 1900, but experiments were not
>>conducted until the fall of that year. To modulate his transmitter,
>>he inserted a carbon microphone directly in series with the antenna
>>lead. After many unsuccessful tries, transmission of speech over a
>>distance of 1.5 km was finally achieved on 23 December 1900, between
>>15-metre masts located at Cobb Island, Maryland.
>
>A couple paragraphs later....
>
>> Fessenden's greatest radio communications successes happened in 1906.
>>On 10 January, two-way transatlantic telegraphic communication
>>was achieved -- another first – between Brant Rock, Massachusetts,
>>and Macrihanish, Scotland. James C. Armor, Fessenden's chief assistant,
>>was the operator at Macrihanish, and Fessenden himself was the operator
>>at Brant Rock.
>
>End quote

Boils down to this:

>> transmission of speech over a
>>distance of 1.5 km was finally achieved on 23 December 1900

I'll take having to study the second over having to study the first any day.

>Finally, I deliberately included this particular material and this
>specific question because of a current disagreement between to members
>of the group.

Do you see Len admitting he's wrong, even when IEEE says so?

Always go for the diminuitive name tactic to make you appear superior,
grizzled old timer.

> Open bands, old timer, wipe the back of those very wet ears...

Excuse me, Leonard. He already HAS an amateur ticket.

> LHA / WMD

Gotta love that "Weapons of Mass Distraction" sig.

> are lots of noises of an explosive sound around.

All that during hot action in 1954, huh?

> Of course, I have to admit that military radio procedure isn't NEAR
> the life and death, exacting protocol demands of amateur radio!

You've got it partially right. Military radio procedure isn't really
near amateur radio's.

> Nosir, hardly anything as ruff and tuff as ham raddio. Must be sheer
> hell during contests, ey? Lots of casualties? Must be.

You'll find out all about it after you've obtained a license, have some
experience under your belt and are dry behind your ears.

> >Of course it's up to him to actually go out and do it...
>
> Riiiiiiight. :-)

Right.

> What a wonderful way to get new radio amateurs. Goad them into
> taking The Test. Shame them. Lash with the Whip!

All of that goading over the course of your self-declared several
decades interest in amateur radio must have taken a toll. We know,
Len. You'll nail that "Extra right out of the box" when you're good and
ready. We'll try and be patient with you.

> Have you brought that to the attention of the ARRL? I'm sure they
> will want good suggestions on enlarging the ham ranks.

I'm sure that adding you will really swell the ranks.

> Do I get a nice medal if I take a test? I've been thinking about
> using an empty shoe box to collect medals in so's I can be Ruff
> and Tuff in da future. :-)

No medals, Len. You'll have to come up with alternative
motivation--like being able to wipe the egg off your face after your
"big brag".

Don't just read about it, Len. Experience it first hand.

> >Hell even 5wpm.
>
> So, learning a useless skill is considered "important?"

If you want an HF amateur license, it is considered important. You could always tackle a code free ticket though.

> I've never had to learn or use any manual telegraphy in 51 years of
> actual communicating on HF.

Then again, you've never held an amateur radio license.

> Morse code skill is an anachronism.

Sure it is, Leonard. So is AM. So is SSB. So is baudot RTTY.

> Only amateurs use it with any
> regularity and then those are only a few amateurs, a minority.

Only a few amateurs using morse? You're as wrong about that as you were about Fessenden.

> >I did it and I'm no good at sort of "motor skill" kind of thing.
>

> Not a good reason for me to waste my time trying to re-enact
> the past.

You have to get out more. Thousands and thousands of radio amateurs use morse in the present.

> >Then get on the air some.
>
> Been there, done that, from LF on up to microwaves.

Not as a radio amateur, you haven't.

> Did it earlier this year using an SGC SG-2020 on HF. :-)

Not just "more experience" but "far more experience".

> Right now I've got 51 years of HF radio "experience." That's longer
> than you or many others have existed. <shrug>

And when you were in your twenties, thirties, forties and fifties there
existed on the planet those with far more HF radio experience than
you. After your passing from this mortal plane, others will catch up
with your experience or surpass it. Your experience will have stopped
cold and theirs will go on. Most of those folks will exist after you
have ceased to exist. That's just the way life works.

You've gotten all tangled up. There's no Blessed and Sacred or any of
those other things. There are those with amateur radio licenses and
there are those without. You've declared an interest. You've posted
here for about nine years. You've not taken a single step toward
obtaining an amateur radio license.

> >
> Depends what you mean by "better" and "worse", Mike.
>

Some types of questions can only be answered by rote memorization of the material. This includes band limits and other rules and regs.

On the other hand, some material is best learned by actually studying the material to understand the basis of the question. This includes things like the length of a quarter wave antenna for HF work as an example. If you memorize the answers to the questions, you will be out in the cold if you need to make an antenna for a different frequency than was on the test. If you study the material, you will learn (memorize) the equation and be able to calculate the length for any frequency. In addition, you read why quarter wave antennas work, not needed for the test and it makes it easier to remember (or memorize) the actual equation, which means you can pass questions on quarter wave antenna length no matter what frequency is chosen as happens when they revise the question pool.

Mike, you stated that you studied the question pool and looked up reference material on those you missed or didn't understand. This is NOT the same as just studying the question pool. You didn't simply memorize the answers to the questions. You went for the underlying basis of the material. This latter is functionally equivalent to studying from a book. What this did was let you focus on those areas where you needed more work and skip the reference material on sections that you already knew or were easy for you. This is radically different than just studying the question pool.

How is that in any way significant to amateur radio policy in 2004?
>
> I find it supremely interesting that you don't know a damn thing about
> HF communications other than ham radio and what you are spoon-
> fed by QST and the league.

You're simply wrong about that, Len. I know quite a bit about HF radio communications - and the ARRL is just one information source.

I recall many exchanges between you and K8MN (a career State Department employee) in which you did not accept his explanation of Morse Code use in State Department radio communications. He was there, you weren't, yet you don't accept his statements simply because they proved you wrong on some minor point or other. As if you knew more than he about State Department HF communications. Riiight!

Then there's the infamous "sphincter post" of yours, where you ranted over a true story by a USCG (that's a branch of the US military) radio operator who was *assigned* to operate Morse Code from a shore station. Not in the 1930s but many decades later. It really, reallly bothered you that somebody in "professional" "big-time" radio actually had true stories to tell about Morse Code on the air.

Now you'll probably dismiss all this as "living in the past" and such, but you don't get a clean slate today after such behavior. You've never disowned any of those rants and insults.
>
>>How is that relevant to amateur radio?
>

> it wrong.

That's not me either.

> Now you come in here thinking "you speak the lingo" and
> say it was all no good, "living in the past."

You tell others they are living in the past, and then you do the same thing to a much greater degree.

Are there words and phrases which I must not use because I was never in the military, Len? Words like "groundpounder"? SNAFU? FUBAR? "Augered-in"? "Six turning and four burning"?

Will you now tell me to

"Shut the hell up, you little USMC feldwebel"

(direct quote of you!)

?

And you don't explain how some experiences of 50 odd years ago somehow make you qualified to determine policy in a radio service that you have never been part of.

Odd, very odd. Also illogical.

> You don't know squat
> about aerospace,

Yes, I do. I really do, Len. Not at a professional level, but I do have a bit of knowledge. More than you have about amateur radio. Thosde facts seem to bother you no end.
>
>>It is. But you're just a spectator there, too.
>

Civics 101. 9th grade stuff ;-)

> All must live with the
> decisions on civil radio matters, even if they are not individually
> acceptible.
>
Then live with the code test, Len.

> That's how it is in a democratic-principle government.

I know.

Here's another democratic-principle thing: Majority opinion counts for something. And when the issue is discussed, the majority of those bothering to express an opinion support a Morse code test for at least some classes of ham license in the USA. Even without a treaty requirement.

Back when the issue was discussed in FCC comments, (1998), the majority of those who commented not only wanted code tests but wanted at least two code test speeds. Not the majority of comments - the majority of *people*. That fact was revealed by someone in "No-Code International", so you cannot claim the data gathering was biased for the result.

You can spam the ECFS but you're still just one person, and a nonparticipant at that. You can call your opponents names but that doesn't change anyone's mind

on the issue.
>
> Your allegation of some kind of weird "personal vendetta" is just
> that, a weird thing.

It *is* a weird thing that you are so fixated on a single issue in a radio service where you play no part and have no place.

It *is* a weird thing that you spend so much time calling people names, making fun of their jobs, education, ethnicity, military service, background, gender, and many other attributes when all they have done is to disagree with you, or show that your statements are incorrect.

It *is* a weird thing that you support an age requirement of up to 14 years for an amateur radio license even though you cannot name a *single instance* where the youth of an amateur radio licensee has caused on-air problems. (The USA has never had an age requirementfor any class of amateur radio license).

> You can't abide the thought of losing the
> morse code test

Sure I can. It was lost for the Technician license back in 1991. That wasn't a good idea, but I learned to live with it.

Heck, way back in 1998 or so, and many times since then, I discussed license structures that would allow individual amateurs to choose which tests they would take. No Morse code if they didn't want it.

So you're wrong - again!

> so, therefore, you think that all those trying to
> eliminate it are abnormal in some regard. Not so.

All anyone has to do is observe your behavior, Len.

> What IS abnormal is the stridency of the PCTA in the maintenance
> of a code test for a ham license without any regard to the changing
> times or the fact that morse code manual telegraphy is going down
> the tubes in all of radio communications except amateurism.

Why is that "abnormal"?

What *is* abnormal is lumping together all people who happen to share a common opinion on one issue of regulation and treating them as if they have all insulted you in the same way. That's what you do here.

An amateur license is for amateur radio, not other radio services. Amateur radio is a unique service, as are all the other radio services, with its own rules, goals, basis and purpose. (If it wasn't unique, it would have no reason to exist as a separate service).

Amateurs use Morse code extensively. So it makes sense to require some basic skill in its use.

And that's what the 5 wpm test is - basic skill.

> You cannot justify modern-day rules based on antiquated reasons
> which no longer apply.

That's true. However, there are modern reasons which do apply.

> But, you met those antiquated rules and now
> insist that all newcomers meet those rules.

Which antiquated rules?

> Why?

A Morse code test for an amateur radio license is a good idea. It's not
antiquated. That's why.

> I don't know why
> you are still so adamant about it, can only speculate.

I simply think it's a good idea. Hams use Morse, it's a big part of amateur
radio *today*, therefore it should be tested.

Why you are so obsessed over a simple test in a radio service where you are
just a spectator is the mystery.
>
>>And despite all your
>>verbiage, you can't get some of us to respond in kind to your name calling

Where have I called myself superior? C'mon, show the post. Or are you afraid of Google, because of what else is archived there?
>
> No sweat to me. If the code test stays, then I hang in there
> trying to get rid of it. If the code test is eliminated, then I be
> satisfied.

Why? You're not a radio amateur, have never been one, and obviously have no intention of being one. You play no part in amatuer radio, yet you seem to think that some ancient non-amateur experience somehow qualifies you to tell others how amateur radio should be regulated. And to endlessly insult them for daring to disagree with you.

And you are obsessed with this code test thing as if it were some sort of moral crusade in which you are the standard-bearer against some imagined injustice. Why?

Personally, keeping an up-to-date frequency/mode chart in the shack
makes more practical sense to me.

> In fact, it could be argued that having a published Q&A and online
practice

Except the question pools are only updated every 3 or 4 years, not
immediately when a change in rules happens. The only thing that
immediately happens is a question that is nolonger valid as
written gets deleted if rules change makes the question wrong.

My personal view is that I would have no problem with a "time-in-grade"
requirement to go from General to Extra. Odds are that if someone gets
a General and stays then two years later goes for Extra, they were
probably at least active as a ham and getting real experience based on
their interests in operating at whatever mode/band they like.

Cheers,
Bill K2UNK

Correct! I know I made Extra a little sooner than I think I should
have. And I know some that made Extra waaay sooner than they should
have. I think that Amateur Extra should mean a little something, and
experience would help a lot in that respect. that hypothetical General
class that just puts the license in a drawer and does nothing for two
years, isn't likely to upgrade anyway.

I've also believed that time in grade at the General level should be required (it would have helped me) but that didn't stop me from personally moving to Extra as fast as I was capable of doing so!

Well, I say they are a *functional* equivalent. Some don't like them because the question pool has the exact answer desired, and knowing the exact answer desired means that someone can just give that answer and be done. But if the answer is in a text, then we can read the text and get the exact answer too.

Right, but I consider them functional equivalents, so the superiority
of one over the other is not my concern.

the two questions asked were just a sample. Indeed there are a huge
number of questions that can be gathered from that text. In fact, I
would credit the author with writing an excellent piece. Interesting,
with just the right mix of human and technical interest. but I digress....

It boils down to that for the purposes of the question pool for sure.

> I'll take having to study the second over having to study the first any day.

The story is more interesting than the question pool. but the test
process isn't designed to be interesting. It is designed to check that
the prospective Ham (or whoever is taking a test for whatever subject)
has been exposed to material thought to be important.

>>Finally, I deliberately included this particular material and this
>>specific question because of a current disagreement between to members
>>of the group.
>

> Do you see Len admitting he's wrong, even when IEEE says so?

Not directly. But I don't expect a "Wow, was I wrong" In fact, there
are only a few people that I ever expect that from. I'm perfectly happy
to admit when I'm wrong, but I'm the oddball.

Len was wrong about the first voice transmission date. Okay, so what. I
still enjoy reading his posts. So many of them make me laugh with his
wit and puns. Dipped in acid they are, but witty nonetheless. Even when
he calls me a hockey puck or a fifth wheel on the Four Morsemen of the
Apocalypse - man, that's funny stuff!

Right. A pool of questions and answers would seem to be the best way to handle that particular part of the test.

Absolutely, Dee.

I wonder how many people DO memorize the question pools as opposed to doing the background work. It isn't very smart to do it that way. 800 plus questions just for the Extra license is a *lot* of memorization.

A lot of hams I know used "Now You're Talking" as a study guide when they got their Technician's license. That has lots of other stuff besides just the pool.

Hello, Len

I guess, as in most things, "it all depends..."

Let's assume a newly minted extra class licensee. He/she knows the
(listed) answer as to what an emitter follower is. He/she also can
perform a simple math calculation as to what voltage will result (with
no current draw) at a tap in a voltage divider.

After a couple of years of on-air experience, he/she applies for a tech job. There is a simple test to take to see if you understand simple electronics. He/she is presented a very simple schematic of an emitter follower with an open input (of course, a simple bias network gives an appropriate voltage/current to the base) and an open output. As can be expected, there is a resistor from ground to the emitter and a resistor from the collector to +12 V. The questions are:

1) what is the dc voltage at the output of the circuit?
2) What is the voltage at the collector of the transistor?

Assumptions are made that the transistor in question has a reasonably high beta and they aren't looking for perfection anyways; just an answer that would reasonably be seen if you stuck a digital meter on the output.

If they answer the question, one can assume that they actually know the material.

Of course, if the answer is that one wants the license only to "talk", then the whole problem is moot. If you examine this newsgroup, you will find a lot of code-tested amateurs, non-code tested amateurs, and non-licensed folks that can not only talk, but argue up a storm ;)

Whew! I'm back, finally, after changing ISPs and having a problem for a week with my browser. Turned out there was a trojan dropper hanging in an old abandoned folder and I kept getting hit with trojans locking up the browser! Ad-aware, Spybot search and destroy, and AVG finally cured the thing (with a brief boot to DOS to delete the directory and virus that AVG couldn't move).

Too soon old, too late smart ;)

Gee, do these threads ever die of old age or do they simply keep resurfacing?

Where I don't see any need for time in grade is between the
entry level (i.e. beginner) and the intermediate (e.g. General).
Perhaps that's why you got such major flak.

Cheers,
Bill K2UNK

Fantastic! Mother Superior is RIGHT again!

The light shining from your brilliance is blinding...

>After your passing from this mortal plane, others will catch up
>with your experience or surpass it. Your experience will have stopped
>cold and theirs will go on. Most of those folks will exist after you
>have ceased to exist. That's just the way life works.

Ah, but the Olde Wuns, the Olde-Tyme Hamatuers will LIVE
FOREVER!

They will never cease! They are Immortal! Legends!

>You've gotten all tangled up.

Only when in the company of Immortal Superior beings such as
yourself. No mortal can survie the onslaught of the Superiors!

>There's no Blessed and Sacred or any of those other things.

No? I'm disappointed.

The Church of St. Hiram doesn't exist?

>There are those with amateur radio licenses and
>there are those without.

Far more without than with. Sorry, Mother Superior, but that IS
true. [put away your ruler, no spanking of knuckles...]

>You've declared an interest.

In ALL radio. Worked at it. Changed majors to become an
engineer. Did it. Retired successfully.

>You've posted here for about nine years.

That long? Oh, my, it has seemed an eternity... :-)

>You've not taken a single step toward
>obtaining an amateur radio license.

"Not a single step?" Tsk, tsk. I've walked into an HRO store.
Two of them, in fact. Bought a nice Icom R-70 in the first one.
Paid cash.

Oh, yes. I forgot! Ordinary mortals aren't ALLOWED to speak
their mind in here if they don't have that blessed amateur license!

Forgive me, Mother Superior.

>Well, Old Master, the cannon fodder, Armed Militia, paint-by-numbers
>stuff just marks you as a crackpot non-participant in amateur radio with
>a newsgroup fetish.

"Cannon fodder?" I was in Signal Corps in the Army, not Artillery.

"Armed militia?" I've seen militiamen in here but all seem to be
mental paraplegics.

"Paint-by-numbers?" Never did that. I'm also a professional illustrator.
Don't need them.

"Crackpot?" I've never done any ceramics but have seen it done.
Some pots did get cracked. Sort of like the posters in here.

"Old Master?" Nope. Can't take that title at all. It would cause you all sorts of grief and charges of Title-Stealing! :-)

Say hello to the other gods on Mt. Olympus for me. Have fun looking down on mortals in the Summer Olympics. :-)

>right out of the box" boast.

I've had an interest in ALL radio for half a century.

Worked in lots of different radio services during that time.

Guess that isn't the same as the oh-so-very-different amateur
radio. You must think amateur radio works by different physics
principles than all other radio?

Riiiiiight. Amateur radio is special, very different, not at all like
all other radio, much more superior, much more noble, glorious,
etc., etc., etc.

>Don't just read about it, Len. Experience it first hand.

Too difficult for ordinary people. Amateur radio is so much MORE
than all other radio and no ordinary person can measure up to
your superiority and tenure in amateur radio. Nossir. Trying to be
as superior as yourself is a non-starter. Can't be done.

>If you want an HF amateur license, it is considered important. You
>could always tackle a code free ticket though.

I don't have any interest on getting an HF AMATEUR license.
I've been on HF, both in the military and commercial radio field.
I've been on HF without any amateur license earlier this year,
all very legal.

>> I've never had to learn or use any manual telegraphy in 51 years of
>> actual communicating on HF.
>

>Then again, you've never held an amateur radio license.

Right! Wow, Heil, you are sure so superior! Amazing.

>> Morse code skill is an anachronism.
>
>Sure it is, Leonard. So is AM. So is SSB. So is baudot RTTY.

Morse code was first used in 1844. No "AM" then, no "SSB,"
no "baudot RTTY." :-)

I haven't used "baudot RTTY" or even "Baudot TTY" in decades.
Old stuff. It's been 8-level ASCII TTY coding for over three decades,
olde tymer. 100 WPM equivalent sustained throughput on those
old electromagnetic TTY machines...much faster with electronic
terminals.

Morse code is 160 years old this year. Well before radio was
ever demonstrated as a communicaitons mediium. It was once
very useful but no longer. It's use is now relegated to helping
self-important, superior amateurs denigrate those who don't care
for slow, manual on-off keying anachronistic communication modes.

>> Only amateurs use it with any
>> regularity and then those are only a few amateurs, a minority.
>
>Only a few amateurs using morse? You're as wrong about that as you were
>about Fessenden.

Okay, big superior one, give us the EXACT number of morse users
on the amateur ranks. USING morse regularly.

Yes, we all know that you are as good as a hundred or even a thousand
ordinary radio amateurs but that inflation is not allowed for the EXACT
number. Prove your work.

>> >I did it and I'm no good at sort of "motor skill" kind of thing.
>>
>> Not a good reason for me to waste my time trying to re-enact
>> the past.
>
>You have to get out more. Thousands and thousands of radio amateurs use

...and many more than "thousands and thousands of radio amateurs"
are NOT using morse code. So?

>> >Then get on the air some.
>>
>> Been there, done that, from LF on up to microwaves.
>
>Not as a radio amateur, you haven't.

Right again! Oh, frabjous joy, the SUPERIOR one shows how good
he IS! :-)

>My friend Jack has a license and experience. You don't know Jack.

[don't give up your day job...stand-up comedy is not your forte']

I went all through high school with John Hof. Nobody called him
"Jack." :-)

>> Ham radio works by different principles than all other radios.
>> That's what I'm told. I don't believe them, but lots of hams do.
>
>Operating principles are not the sum total of amateur radio.

Riiiiiiight!!!!! It is the mindset, the glory, the nobility, the
imagination, and the fantasy of THE AMATEUR SERVICE!

The few, the proud, the United States Amateur Corps!

Be all that you can be...and more!

Wear that superiority proudly...show others who's Boss around here!

[all that for a hobby...]

>> As far as morseodism is concerned, I'm an atheist. I don't
>> worship at the Church of St. Hiram. Put away your collection
>> plate and Him books.
>
>I get it. Because you don't find anything in which to believe, the rest
>of us aren't supposed to take part for fear of offending you. How very
>PC.

Separate church and state, Mother Superior.

"PC?" My Personal Computer works very well, thank you. No license
needed to use it, certainly no morse code skill needed with it. It can
reach around the world wherever there's an Internet connection without
any worry about HF propagation conditions.

But...you were talking "political correctness" weren't you? Of course.
Everyone has to Believe your personal political correctness or be
constantly damned as a heretic. No problem. You go ahead and act
as superior as you've always done. :-)

All us readers can expect nothing else. You ARE superior.

>Apocalypse - man, that's funny stuff!

I don't remember calling you "a fifth wheel on the Four Morsemen of the Apocalypse" but then Rev. Jim will call me wrong anyway... :-)

The whole point of this newsgroup (or newsgrope) seems to be for a few of the regulars to establish their divine, ultimate superiority in anything remotely close to amateur radio. This "superiority" is accomplished by trying to denigrate and insult all who talk back to those noble, never-wrong extra regulars.

As I've pointed out before on testing and the QP, the FCC never ever made a maximum limit on the pool questions, only a minimum. If the QPC wants to make it large, then it can. A very large QP will defeat all the baseless charges of "incopetence" via "memorization" of all the answers.

The question pool is generated by an all-amateur group. It would seem likely that they would know the material and what should be there.

The criticism hurled about in here isn't directed at the QPC, is it? The criticism is against all those who took the test when the public pool data was available...by the OFs who took tests under the old system of "private" questions.

"Mankind invented language to satisfy his need to complain." - anon.

Here's one version - note the date, and this wasn't the first incarnation:
>

From: N2EY (n2ey@aol.com)
Subject: Re: What SHOULD ham licenses test for?
View: Complete Thread (212 articles)
Original Format
Newsgroups: rec.radio.amateur.policy
Date: 2002-05-23 13:18:22 PST

(some snippage)

So the following license structure/test structure is suggested:

1) Three classes of license: Basic, Intermediate, Full (change the names
if you don't like them)

2) HF/MF bands split into subbands by mode and split again by license class.
Some bands may be split by mode only. ("Mode" meaning "narrow/CW/digital"
vs. "wide/analog phone-image/digital"

3) "Basic" license test is simple 20-25 question exam on regs, procedures,
and safety. Very little technical and RF exposure stuff. Main objective
is to keep Basics out of trouble. Basics get 100-150 watts on HF/MF and
25 watts or so on VHF/UHF (power level determined by RF exposure limits).
Modes are CW, analog voice, PSK31 and many of the other common data
modes
like packet. Basics cannot be VEs, control ops for repeaters, or club
trustees. Basics get most VHF/UHF and about half of HF/MF spectrum. Basic
is meant as the entry level. Easy to get, lots of privs, yet there's still
a reason to upgrade.

4) "Intermediate" license test is more complex 50-60 question exam on regs,
procedures, safety and technical stuff. Intermediates get 300-400 watts
on all bands, all modes. Intermediates can be VEs after qualification
(see below), control ops for repeaters, and club trustees. Intermediates
get all VHF/UHF and about three quarters (or more) of HF/MF spectrum.

Intermediate requires at least one year experience as a Basic.

5) "Full" license test is quite complex 100-120 question exam on regs, procedures, safety and technical stuff. Mostly technical, with some regs to cover expanded privs. Fulls get all privileges, modes, bands, etc. except that Fulls can be VEs only after qualification (see below). Full license requires at least one year (preferably two years) as an Intermediate.

6) All licenses are 10 year and fully renewable/modifiable.

7) Basics have six-character calls, Intermediates have five- or six-character calls, and Fulls have four-, five-, or six-character calls. Nobody has to give up an existing callsign.

8) There is a separate 30-35 question test for VE qualification, open to Intermediates and Fulls, which allows them to be VEs. Existing VEs are grandfathered.

9) Existing Novices become Basics, existing Techs, Tech Pluses, Generals and Advanceds become Intermediates, and existing Extras become Fulls.

10) Experience requirement is not waived for existing hams to upgrade, but their time in existing classes counts.

End result is a system that is easy to get into (Basic is envisioned as a 21st century version of the Novice) and has reasonable but meaningful steps to reach full privileges. Testing matches the privs granted. Power levels are set about one S-unit apart. Current hams would be allowed to use the existing power levels so nobody loses privileges. There are only three license classes and four written tests, so FCC doesn't have more work.

>the exact answer too.

The difference is that reading the text requires some understanding of the
material. As Dee points out, if you know only that there will be questions
about quarter-wave verticals on the test, you learn the formula and how to use
it. But if you know the question pool has, say, 3 questions on quarter wave
verticals, and they are for 2, 15 and 40 meters, it may be easier and quicker
to just memorize a few bits of info needed to answer those questions.

>
> and if a question pool is available, the student has to go over the
>entire question pool to learn the few questions that are asked.

Except if you have the pools available, you don't even have to read the paragraphs. Just highlight the right answers to those two questions and you're set.

But if all you know is that there will be questions about Fessenden and the first voice radio transmissions, you'll read and try to absorb the whole story.

>>>If I were to voice my preferences, I would just as soon read a nice
>>>story about Mr. Fessenden than a dry question pool. But functionally the
>>>two are identical.

They smell of something else ;-)

>but witty nonetheless.

Halfway there, anyway ;-) ;-)

>Even when
>he calls me a hockey puck or a fifth wheel on the Four Morsemen of the
>Apocalypse - man, that's funny stuff!

What's really funny is that he doesn't get the joke when it's turned on him.

One of the key elements of humor is surprise. Len is totally predictable, so there's little if any humor in his posts. Heck, there's even a profile of him that exactly predicts his behavior here.

But Len does serve one good purpose: he's one of the best friends the code test ever had. He's probably done more to keep code testing a requirement for a US ham license than any of us.

For that, let us be truly thankful ;-)

There was an article on the ARRL website a few months ago about an "efficient"
"Tech in a day" class. The authors (who were not ARRL staff, btw) went on about
their high success rate and 'efficiency' in getting people licensed.

Basically their method was to simply review the Tech question pool. A quick
cram course, and then the test. First-time pass rate of more than 85% IIRC.

The article caused such a stir that it was quickly pulled. ;-)

I say such courses actually do new hams a disservice because they are left with
a license but not the knowledge or skills they need to use it.

I don't know if anyone offers "General in a day" or "Extra in a day" courses,
but I have read of a "GROL in a day" course. Money-back guarantee, IIRC.

>It isn't very smart to do it that way. 800
>plus questions just for the Extra license is a *lot* of memorization.

Not if you consider that:

1) You don't have to do it all at once. There are three writtens and they don't
share pools

2) You don't have to memorize the pool - just enough of the correct answers.

3) Get ~74% right and you pass. You get the same license as someone who aced
it.

4) A guess is as good as gold.
>
>A lot of hams I know used "Now You're Talking" as a study guide when

Good for them! Most of the new hams (and old ones too!) I've encountered really
do want to learn the material, not just pass the test.

I don't doubt it! That is the "cramming route", and it is a horrible
way to learn - or not learn - anything.

> I say such courses actually do new hams a disservice because they are left with
> a license but not the knowledge or skills they need to use it.

Right. All that does is puts the test material into mid-term memory,
and from there it goes we know not where.

Its a *lot* of questions between the three pools.

> 2) You don't have to memorize the pool - just enough of the correct answers.

? If you are going the rote route, you have to do something, because
you don't know which questions will be used.

> 3) Get ~74% right and you pass. You get the same license as someone who aced

Just like a passing grade anywhere else

> 4) A guess is as good as gold.

True of any multiple guess test I guess.

>>besides just the pool.
>>
>
> Good for them! Most of the new hams (and old ones too!) I've encountered really
> do want to learn the material, not just pass the test.

There we agree for sure. The learning process for my General and Extra
tests was *fun*. Certainly the Extra was more difficult, taking around a
week of fairly intense study and reference. But it was still enjoyable.

Can a person do one of those license in a day things? I guess. They
have my sympathy.

Remember in "Family Vacation" when the family was at the Grand Canyon,
but Clark Griswald was in a hurry to get to "Wally World"? He bob's his
head up and down a few times impatiently, and tells them "Okay let's go".

They were there, but they missed all the good stuff. Just like crammin'
Hams.

But we can't dictate how people pass the tests, only that they do pass
them.

And I suspect that almost all new Hams try to do this the right way.

My avionics professor noted this and developed a series of screening tests to thwart the "one day wonder" syndrome. Sure, you could study the Q&A pool "guides" and get your tickets. (Both FAA & FCC) However, in order to pass the licensing courses, (Airframe, Powerplant, & Avionics) you had to score >= 80 on you "screenings." Of course, the licensing classes were required to earn your sheepskin. At the time, we thought it "$ucked big time," but were thankful during our job interviews when little details like Kirchoff and Thevenin found their way into the interviewer's questions.

Maybe my brain works differently, but if you have a question pool that
has a certain number of questions regarding antennas, and you may be
called upon to answer a few of any of those questions, its a lot easier
for me to remember 468/[Frequency in mHz] for a dipole, 71.3/[Frequency
in mHz] for a 1/4 wave vertical, and a few other quick calcs, than it is
to remember the answer to a specific question.

A person would have to be a little dense to try to do otherwise. And of
course, if you know the wavelength of the frequency in question, you can
ballpark the answer pretty closely almost without thought.

> But they're not functional equivalents at all.

For the purposes of the test, they are the same. As interesting as I
found the fact that Brashear made the optical interrupter, the people
that made up the test didn't include that on the test.

>>>If someone who knows nothing about Fessenden discovers that there are only

>way to learn - or not learn - anything.

That group of VEs have their own website. If anyone "pulled" that,
it was the VEs themselves, for different reasons than not conforming
to the Blessed Status Quo.

There's a great deal of contention on the TEST. Some say it MUST
be passed. Others complain that "nobody is learning anything."

The implication is that the Olde Wayes are the ONLY way to go.

Passing the amateur test only yields personal authorization to
transmit RF energy on certain frequencies using certain modes
and modulations, always abiding by federal regulations thereto.

I'd say that a "quickie cram course" fulfills getting a license. The
license is not, nor was it ever, any "degree" or academic certificate
of learning anything. The FCC is not chartered to be an academic
organization.

>> I say such courses actually do new hams a disservice because they are left
>with
>> a license but not the knowledge or skills they need to use it.
>
> Right. All that does is puts the test material into mid-term memory,

>and from there it goes we know not where.

You can say that about any test in any activity...and find living proof
of it as examples.

Amateur radio is NOT a profession, guild, union, or other craft. Any
amateur radio person can be as good or bad as they care to be. A
few questions on a single test (renewable by electronic or mail means
as long as the FCC allows it, no retesting required if done within time
limits). The "importance" of having amateur smarts seems more like
some kind of self-defined role-model fantasy of many. But, it is still a
fantasy and is NOT an absolute requirement of any true officiating
body.

>> I don't know if anyone offers "General in a day" or "Extra in a day"
>courses,
>> but I have read of a "GROL in a day" course. Money-back guarantee, IIRC.

A "GROL" is a COMMERCIAL license. Why is that used as an
example in an AMATEUR newsgroup?

I never took any test for a "GROL." After I was released from active
duty - and three years working in communications on HF through
low microwaves - I was able to borrow the entire FCC rulebook
(in 1956 those came in loose-leaf form). I just memorized a lot of
that in two weeks of intensive "cramming" on regulations. I didn't
need any technical studying. Passed the First Phone test in one
sitting (including a mass interruption of the whole Chicago Federal
building while they had a fire drill).

All that the "cramming" did was allow me to pass the test, receive
the desired license, and fulfill some personnel requirements to work
at radio and television stations. Did I "know" everything? No. There
were no technically up-to-date schools on the broadcast industry or
much of the entire electronics industry. One learned specific
technical things on-the-job. No problem. Got the required work done,
got the monetary compensation. Everyone satisfied enough.

The state of Illinois finally got around to having a job category of
"electronics technician" and "electronics engineer" roughly in the
early 1970s...despite the existance of Motorola and Zenith and
Admiral in the Chicago area with large numbers of those
occupations. [one reason why I never collected anything in the
way of monies for not having a regular job in 1956...heh]

The technology of electronics (radio is a subset of that whole) is
constantly changing, expanding, discovering new things. Schools
can't keep up with the pace, are always lagging. Look at amateur
radio technology...is the technology of today much like that of 40
years ago (like 1964)? Not much. Someone who passed their last
ham test 40 years ago certainly can't be "up to date" on modern
day ham technology WITHOUT doing their own education on both
technology and operating skills. Yes, a CW-only hold-off can

concentrate solely on that and play guru...but a guru circa 1964,
not of 2004.

> Its a *lot* of questions between the three pools.

That word "lot" is highly subjective, not useful for quantifying anything
to a large and varied group of people.

Again, the amateur radio test is NOT an academic thing and amateur
radio is NOT a profession, guild, union, or craft requiring knowledge of
a certain kind. Amateur radio is a basically a hobby. Nobody gets
fired from a "job" in amateur radio, receiving some kind of severence
check.

> ? If you are going the rote route, you have to do something, because
>you don't know which questions will be used.

Irrelevant. The detractors of the open QP say "it can be memorized!."
Entire. "Size of the QP is not object" to some detractors. :-)

> Just like a passing grade anywhere else

Just what do you think the amateur radio test IS? An applicant
either passes or fails. Simple. Do you lose any job prospects
if you fail an amateur test?

>> 4) A guess is as good as gold.
>
> True of any multiple guess test I guess.

"Fool's gold." Probability of a correct answer given four possibles
is too low to pass the test. NO "gold."

> There we agree for sure. The learning process for my General and Extra
>tests was *fun*. Certainly the Extra was more difficult, taking around a
>week of fairly intense study and reference. But it was still enjoyable.

Anything interesting is fun to learn about. Tests aren't needed to
have fun.

> Can a person do one of those license in a day things? I guess. They
>have my sympathy.

As I recall my first full day at ADA transmitters, we were able to QSY
most of the transmitters after a half-day's on-the-job instruction. NONE
of the newcomers were experienced on those fixed-station trans-
mitters; those weren't taught in any Signal schools. 1 KW to 15 KW
RF power output, all circuits operational 24/7.

> But we can't dictate how people pass the tests, only that they do pass
>them.

The "dictation" seems to be endmic with the OFs. They condemn
any test that is different from the one They took...

> And I suspect that almost all new Hams try to do this the right way.

What is "the right way?"

Is anyone going to lose their job for not doing it "the right way?"

Is not passing a ham test going to subtract from college credits?

Will your family, friends, neighbors all shun you if you fail a ham test?

Us readers in Reality Land can't comprehend what "the right way" is in the individual, subjective fantasylands of the OFs, only conjecture on their "importance of doing it the right way."

Stressing some (mythical?) "right way" without explaining what this "right way" is gets a bit wearying and doesn't offer any quantitative proof that it IS any sort of "right way."

But, one can be sure that all the OFs "did it the right way" because they passed and will never have to worry about taking another ham test in their lives. They can feel secure in looking down Their noses at those who haven't taken that particular test.

You brought up the term.

> "Armed militia?" I've seen militiamen in here but all seem to be
> mental paraplegics.

You brought up the term.

> "Paint-by-numbers?" Never did that. I'm also a professional illustrator.
> Don't need them.

You brought up the term.

> "Crackpot?"

I brought up that term. It suits you.

> I've never done any ceramics but have seen it done.

sorta like your experience in the world of amateur radio, huh?

> Some pots did get cracked. Sort of like the posters in here.

Don't be too hard on yourself, old shard.

> "Old Master?" Nope. Can't take that title at all. It would cause you
> all sorts of grief and charges of Title-Stealing! :-)

You brought that one up as well.

> Say hello to the other gods on Mt. Olympus for me. Have fun looking
> down on mortals in the Summer Olympics. :-)

Still mixed up on that god/no god stuff? I won't look down on athletes
participating in the Olympic games, much as licensed radio amateurs are

participants in amateur radio. Been to the U.S. Olympic team's
newsgroup?
Maybe you can advise them on how best to regulate things. You could be
a sort of self-appointed advocate for somebody-or-other.

It's only horrible if the student really wants to learn the material.

> > I say such courses actually do new hams a disservice because they are left > > with
> > a license but not the knowledge or skills they need to use it.
>
> Right. All that does is puts the test material into mid-term memory,
> and from there it goes we know not where.

Not only that, the person may not have any real understanding of how
to actually get on the air. Heck, I know of a General who's had a
license fo
years but can't figure out how to get a simple end-fed random wire to
work
on HF.

> > I don't know if anyone offers "General in a day" or "Extra in a day"

You only need to word-associate the correct answer to each question,
not recite them verbatim.

> > 3) Get ~74% right and you pass. You get the same license as someone who aced
> > it.
>
> Just like a passing grade anywhere else

Not completely. In many situations things like GPA and class ranking
make a difference. In grad school I had to maintain a B average (3.0
GPA) just to stay in school. Wasn't a problem, even though I was
working full-time while going to school at night.

> > 4) A guess is as good as gold.
>
> True of any multiple guess test I guess.

Yep. That's the downside. The upside is that there is no chance for
bias or interpretation of an answer - you either got the right one or
you didn't.

That's not a minor point, either. Suppose the question is and essay on
"how long is a 40 meter dipole, and how do you determine the length?"
Is 66 feet the right answer, or 67? If a person puts down 68 feet, is
that wrong? How much explanation is enough?
>

Actually I never formally studied for any FCC license exam. Just read
my books, built and used my rigs and went for the test when I thought
I was ready.
>

Never saw that one but you describe the scene so perfectly that I
didn't have to.

One sees this sort of thing in many ways. There's the parent who is so
intent on videodocumenting all of their kids' school plays and sport
events that they miss actually seeing/experiencing the kid perform or
play. There's the air show/railroad buff/museum visitor/tourist who is
so intent on getting the picture or marking the checklist of places
visited that they don't actually experience the aircraft, trains,
museum exhibits or local color.

And there's the ham who doesn't experience actual radio operation...

> They were there, but they missed all the good stuff. Just like crammin'
> Hams.
>
> But we can't dictate how people pass the tests, only that they do pass
> them.
>
We *can* have an effect. I've taught ham radio classes, code and
theory, but I won't teach a "license in a day" class, nor endorse one.

> And I suspect that almost all new Hams try to do this the right way.
>
Now ya just set yourself up to be a target, saying there's a right
way!

Bully for you. Unfortunately, that isn't what you wrote here a numbe of
times.

> Worked in lots of different radio services during that time.

What's any of that to amateur radio?

> Guess that isn't the same as the oh-so-very-different amateur
> radio. You must think amateur radio works by different physics
> principles than all other radio?

No, I don't think that at all. The physics of radio is but a small part
of being a radio amateur.

> Riiiiiight. Amateur radio is special, very different, not at all like
> all other radio, much more superior, much more noble, glorious,
> etc., etc., etc.
>
> >Don't just read about it, Len. Experience it first hand.
>
> Too difficult for ordinary people.

Nope. Lots of quite ordinary folks obtain amateur radio licenses. If
you mean that you find it too difficult, just say so.

> Amateur radio is so much MORE
> than all other radio and no ordinary person can measure up to
> your superiority and tenure in amateur radio. Nossir. Trying to be
> as superior as yourself is a non-starter. Can't be done.

While it is true that time is against your catching up to me in tenure
in amateur radio, I've made no claims to being superior unless you'd
like to count the fact that I'm "in" and you're "out". That's your
problem.

> >If you want an HF amateur license, it is considered important. You
> >could always tackle a code free ticket though.
>
> I don't have any interest on getting an HF AMATEUR license.

You've written conflicting posts on that matter.

> I've been on HF, both in the military and commercial radio field.
> I've been on HF without any amateur license earlier this year,
> all very legal.

Am I supposed to care? How does your being on HF in another service
supposed to effect me?

Morse is now used daily by many thousands of radio amateurs to
communicate. The denigration you feel is simple self-loathing.

> >> Only amateurs use it with any

bwaahaahaa

Back in BSEE school, at least one prof used to make us get up and
teach - totally at random. He'd put a problem on the board, then ask
if we knew how to solve it. If we said yes, he'd toss somebody the
chalk and say "show me". (There was no way we'd say no unless it was
totally new material).

One course (3 trimesters) in grad school had no tests at all. Instead
you had to do presentations in front of the whole class, who would ask
questions and pick apart your explanations.

Back in the bad old days, the way you passed the code receiving test
was that the examiner had to find at least a certain number of
consecutive correct legible characters on your paper. If he couldn't
read them, you failed. And you had to send with a straight key until
he said passed or failed. Totally his judgement.

In article <40FED1D0.5060803@psu.edu>, Mike Coslo <mjc5remove@psu.edu> writes:

> Maybe my brain works differently, but if you have a question pool that
>has a certain number of questions regarding antennas, and you may be
>called upon to answer a few of any of those questions, its a lot easier
>for me to remember 468/[Frequency in mHz] for a dipole, 71.3/[Frequency
>in mHz] for a 1/4 wave vertical, and a few other quick calcs, than it is
>to remember the answer to a specific question.

Since U.S. amateur radio frequency allocations don't allow any
frequencies below the top of the AM BC band, I'd suggest you get
your brain to work with MegaHertz (MHz), not milliHertz (mHz).

The length of wire needed for a half-wave dipole is, in feet, equal
to about 468 divided by the frequency in MegaHertz. A quarter-
wave whip length in feet is 234 divided by the frequency in Mega-
Hertz. [lengths will be way too short if you use milliHertz...:-)]

But, those values of 468 and 234 aren't correct for free space,
yet they are good for wire antennas. The Why of that is handy
knowledge that can be applied to other things.

BTW, just to make sure that old threads "never die," a DIPOLE
has just two elements (what the "di" part stands for). It doesn't
have to be exactly a half-wave in length...it can be 5/8 wave, a
full wave, most anything.. :-)

> A person would have to be a little dense to try to do otherwise. And of

>course, if you know the wavelength of the frequency in question, you can
>ballpark the answer pretty closely almost without thought.

Constants like 2-3-4 or 4-6-8 have "built-in" mnemonics in the
form of consecutive digit increases.

The Boltzman Constant of 1.38 x 10^-23 doesn't have that digit
relationship, quite. Yet, if one works with it often enough (noise
voltage, noise figure, etc.) it becomes stamped in the synapses.

The resonance formula is F (Hz) = 1 / (2 pi Sqrt (L C)) with L in
Henries and C in Farads. Learned that many years ago.
Same with inductive reactance, X_L = 2 pi L and capacitive
reactance X_C = - 1 / (2 pi C).

Those with a programmable calculator can store the 2 pi constant
up to 10 digits for handy calculation recall...or try to remember the
definitely not-consecutive digit string...or use a transcendental
equality to get it or at least pi from a common value. :-)

[watch while the knowitalls jump in here with the latter equality...]

The lower end of "the bands" (on HF) for amateurs has the
progressive relationship of 3.5 - 7 - 14 - 21 - 28 way back in time
(AF or after Fessenden)...and for a reason less political and more
for convenience of the hams of 1954. [watch here for remarks
that aren't really pertinent about one of those bands and 1954...:-)]

Please excuse me. I have to study some "important" material,
all about the 1900 to 1906 period and how it "applies" to knoweldge
in radio of 2000 to 2006 period. That seems to be very necessary
to this venue and all must obey the newsgrope protocols... :-)

What skill are you talking about? Morse Code skill is very useful in
amateur radio, so you must be talking about something else.
>
> I've never had to learn or use any manual telegraphy in 51 years of
> actual communicating on HF.

You've never been a radio amateur.

Your statement is like that of a person who never learned to drive a
manual transmission vehicle.
>
> Morse code skill is an anachronism.

No, it isn't. It's a very useful skill. That really seems to bother
you.

> Only amateurs use it with any regularity

That's why it still needs to be tested for an amateur radio license

> and then those are only a few amateurs, a minority.

How do you know? Have you actually listened to the HF ham bands?
>
> >I did it and I'm no good at sort of "motor skill" kind of thing.
>
> Not a good reason for me to waste my time trying to re-enact

Somebody else's rig, somebody else's license. Second-hander.

> >Then you can speak with some creditability
> >here and other forums on ham radio.
>
> Impossible! "Those without an amateur license have zero-point-
> zero experience, don't know nuthin, etc., etc., etc., etc." :-)

Who said that?

Here's a plain, simple fact, Len: You don't know squat about Morse
Code. Sure, you can quote a lot of factoids but you don't know squat
about it in a practical sense.

Well now, on-air experience is another kettle of fish! I've got mixed
feelings about that. One thing is for sure - the beginner needs to stay
away from rec.radio.amateur.antenna! Well meaning and quite a few astute
people there, but they almost had me convinced I'd never get a signal
out because of all the "problems". ARRL's mentor program is going to be
a good resource for that sort of thing. They've already contacted us
about a local new ham that would like some help.

Just how many people do you think would do such a thing anyway. Its
still easier to simply learn the material.

But this is Ham radio, not graduate school.

Correct.

And if they give the answer in furlongs? ;^)

Remember that simply stating 40 meters is out, because in the Ham
section, the correct length at 7 mHz is over 2 and 1/2 feet longer than
it is at 7.3 mHz. Now imagine 80 meters, where the diff is almost 17
feet!! Gonna have to use specific frequencies.

Essay questions work best for essay type answers. Technical material is
much more at home in the world of letters and numbers.

I'm really familiar with that one. As s professional photographer -
don't get confused, my job entails several different things - I am
sometimes asked to show up with my camera to social events or family
weddings. That takes a lot of the fun out of it. Last year was the first
time in 25 years I went to a family wedding without being asked to
shoot it. WoW, what a difference! I really enjoyed that. Did you know

that its kinda fun to dance and talk to other people and socialize?

Oh, it fulfills it all right. And thousands (hundreds millions?) of
university students work it that way. Is that a good thing though? I'll
reserve the right to think that if there is a test, I'll figure out
what's being tested and go learn it. Some people may or may not want to
do that. If they want to cram and forget, so be it. No law says I have
to like it! 8^)

The "right way" is obviously an opinion. People following the thread
will figure out that my version of the right way is to use whatever is
given to you as study tools, and that which you don't know, you go find
out about. Other's right way may include your Olde Tyme Hamme tests
(whatever they were) one day cramming, or even elimination of all test
requirements.

I recall you discussing space exploration. Have you ever been in space?

What if Len's factoids are true?

Are they any less true if it is Len quoting them?

There's lots of personnel people in companies convinced that ONLY
those academic certificates show an job applicant's ability. That's
why the medium to large companies needing engineers do the
second and final interviews by staff engineers.

The academic certificate gets one in the door, so it is valuable. Looks
good on a resume (not a curricula vitae) and some use that as a "title."

Too many take Titles at face value. That's the old royalty thing coming
alive again. But, does a Nobel Laureate biochemistry PhD have the
SAME smarts in national socio-politics? Doubtful. [see Linus Pauling]

An olde tyme hamme that is a whiz with "CW" can follow the absolute
procedures, protocols, and other good things of the 1930s and 1940s
and that makes him/her a Great Guru of modern amateur radio?
They would say "absolutely yes, yes, yes!" but that is just themselves
talking about what they can do. That doesn't necessarily fit what
all modern radio amateurs (or prospective amateurs) "should be."

>>> And I suspect that almost all new Hams try to do this the right way.

Right! OPINION. Personal opinion, biased by whatever They did.

>People following the thread
>will figure out that my version of the right way is to use whatever is
>given to you as study tools, and that which you don't know, you go find
>out about.

Good answer!

So far, with only 108 years of life as a communications tool, radio
has been constantly growing, expanding, pushing states of the art
beyond several plateaus. It hasn't stood still to allow everyone to
catch their breath let along become stagnant on "knowing all the
answers." New questions/answers keep appearing all the time.

What was once the "best thing/way to do" has given way to numerous
things/ways to do, not once but many times. One has to keep at
the self-learning process to keep up. Schools can't keep up to date
though many try.

> Who knows, I'm not an OF.... yet. Hope I eventually get to be one
>because the alternative ain't much fun.

OF-ism is a mental thing, not a chronological thing.

A good example is the fabulous Eric June who once graced this news-
grope in a series of arguments with Cecil Moore. Two Extras with very
different outlooks. Cecil was (is?) flexible despite being older. June
was an inflexible thirtysomething...finally, grudgingly conceded defeat.

Cecil has been around for a long time but one cannot call him an OF
in thoughts or opinions...though many have tried. :-)

The "alternative" awaits us all. Even the morseodists. No sweaty-dah.

Might as well learn to live with it. :-)

>I recall you discussing space exploration. Have you ever been in space?

Here's a plain, simple fact, Brian. Jimmie has never said anything
about working IN the space biz. He's never laid a hand on an SSME
or gotten his (gloved) hands inside a space package.

Here's another plain, simple fact: Jimmie loves being a guru in all
kinds of areas besides olde tyme hamme raddio yet his
"qualifications" in those areas weren't covered in the olde tyme
ham test. Anyone who doesn't like his OPINIONS are treated as
lesser beings, "always in error," and given a denigration treatment
as if they were unqualified for anything.

>What if Len's factoids are true?

Here's another plain, simple fact, unavoidable: Every other radio
service but amateur either never considered morse code in the first
place or dropped its use for communications.

More "plain, simple facts" (gotta love that headmasterish tone!)

Way back before most of the folks in here existed I learned morse
to maybe about 8 WPM. The minimum rate was then 13 WPM. I
didn't keep up with it due to other activities (being a normal human
being of adolescent years), and it rather evaporated. By the time
I was in military communications, I saw what the Big People did on
HF and all thought of morsemanship went out the window. Never
had to use it after that and didn't bother to.

>Are they any less true if it is Len quoting them?

Absolutely! :-)

It's the olde Exxtra Double Standard. They state opinions as "fact"
and everyone against those are "in error," "incorrect," "don't have the
'true facts'" or other bullshit arrogance. Getting tiresome with those
few irregulars. They need bran and fiber...and a few still need mental

therapy and counseling. <shrug>

Here's a plain, simple, accurate, factual signature:

LenAnderson@ieee.org

Who is "Jimmie"? How do you what that person has or has not done?

Does someone have to have "been in the space biz" in order to discuss space exploration? Why?

Have *you* ever "been in space"?

And here's a fact for you: Anyone who pays US federal taxes funds the US space program. And the US defense program. So *all* taxpayers have a right to talk about those programs.

But nobody's taxes fund Amateur Radio programs. That's paid for by amateurs themselves.

> Here's another plain, simple fact: Jimmie loves being a guru in all
> kinds of areas besides olde tyme hamme raddio yet his
> "qualifications" in those areas weren't covered in the olde tyme
> ham test.

You've never been a radio amateur, yet you claim to know all about what the amateur radio rules should be. You've never had an amateur radio station but you act like a guru of all things radio amateurs do, even passing judgement on what skills are useful and which are useless. You've never talked about working for the US State Department nor the US Coast Guard, yet your full of criticism for those who have done radio communications for them.

You've never been a mental health care professional but you sure are quick to diagnose other people's alleged "problems".

> Anyone who doesn't like his OPINIONS are treated as
> lesser beings, "always in error," and given a denigration treatment
> as if they were unqualified for anything.

Well, you can't be talking about me.

You are doing a pretty good job of describing Len Anderson, though. Such as the way you reacted to a US Coast Guard radio operator's description of his experiences in your classic "sphincter" post. Or your behavior when confronted with a different opinion.

What really tells the tale is how you act when one of your claimed facts is proved to be incorrect.
>
>>What if Len's factoids are true?
>
> Here's another plain, simple fact, unavoidable: Every other radio
> service but amateur either never considered morse code in the first
> place or dropped its use for communications.

That's pretty much true. So what? You've repeated that point many many times, but never explained what significance it has to amateur radio regulations.

Tell us *why* that fact makes any difference to amateur radio. Tell us *why* amateurs should copy what other radio services are doing.

And also note that other radio services *did* use Morse Code extensively in their communications - and a lot more recently than the 1930s.
>
> More "plain, simple facts" (gotta love that headmasterish tone!)

You sure seem to. You talk down to everyone...;-)

> Way back before most of the folks in here existed I learned morse
> to maybe about 8 WPM.

Really? Got any proof?

> The minimum rate was then 13 WPM.

So it must have been before 1951. Why are you living in the past?

> I
> didn't keep up with it due to other activities (being a normal human
> being of adolescent years),

Gee, Len, a lot of us managed to do other activities and were "normal human being(s) of adolescent years". And yet we were also hams using and learning Morse Code.

You seem to think that "a normal human being of adolescent years" couldn't do that. ;-)

Perhaps that's why you advocate a 14 year age requirement for an amateur radio license......

> and it rather evaporated.

Maybe it never existed!

In either case, you don't know squat about Morse code *now*.

> By the time
> I was in military communications, I saw what the Big People did on
> HF and all thought of morsemanship went out the window.

"Big People"? Who are they? Heck, I'm probably bigger than you ;-)

Also probably stronger, smarter, faster, younger, better looking....;-) ;-) ;-) ;-) ;-) ;-)

I guess the Navy, the Coast Guard, the State Department and the maritime radio services of the 1950s, 1960s, 1970s, 1980s and 1990s don't count as "Big People" to you. Nor the other radio services using Morse Code.

And of course we radio amateurs must all be leprechauns...;-) Tell yer buddy Vipul about that - he says we hams are "Big People".

> Never had to use it after that and didn't bother to.

Like the person who drove only automatic-transmission cars since 1952. Or the person who never learned to cook and simply ate at restaurants or heated up prepackaged meals.

>>Are they any less true if it is Len quoting them?
>
> Absolutely! :-)
>
> It's the olde Exxtra Double Standard. They state opinions as "fact"
> and everyone against those are "in error," "incorrect," "don't have the

Another Shaw Cable user clicks on a Virus and now tries to infect
the rest of USNET. Meanwhile the Dead heads that run the abuse
department at Shaw dont do jack because they dont have the technical
ability to even log on.

> Why not?

Because the limited privileges of a beginner license are limiting and should
encourage a quicker path to upgrade if someone is capable of doing
so. I believe the TOP level should/could have time-in-grade as that would
help set those folks off as not simply having passed the tet, but also
been operators or otherwise active for N period of time.

Cheers,

That must be a "wrong, incorrect" statement. We are NCTAs,
therefore automatically suspect of error! :-)

The argument will be (more or less quotations) "the lower end of
'the bands' (those on HF) are full of CW contacts, just listen!" :-)
That's just the classical "if all you've got is a hammer, everything
looks like a nail" king of non-justification. The PCTAs WANT to
hear CW signals and, naturally (real or otherwise) hear them!
They simply dismiss all the other signals on 'phone because "they
don't count!" :-)

Gotta love all those rationalizations.

>Who is "Jimmie"? How do you what that person has or has not done?

All us readers know the famous Rev. Jim of the newsgrope. Don't
be so modest...

>Does someone have to have "been in the space biz" in order to discuss space
>exploration? Why?

A few snips/snits following you will make the RULE that "the only ones
who know anything about amateur radio are those with amateur radio
licenses." Heh.

>Have *you* ever "been in space"?

Not as much as thou, oh noble cosmonaut of the ham universe.

>And here's a fact for you: Anyone who pays US federal taxes funds the US space
>program. And the US defense program. So *all* taxpayers have a right to talk
>about those programs.

Talk about the space biz all you want, noble spaceman. You've not
been working in it so you know not squat about it...except for some
articles in popular newsstand periodicals.

>But nobody's taxes fund Amateur Radio programs. That's paid for by amateurs
>themselves.

Here's a plain, simple fact: The FCC regulates ALL of U.S. civil radio
(which includes amateur radio) and is paid out of the U.S. Treasury
whose monies come from ALL citizens.

Ergo, ALL citizens can comment on the regulations of the FCC or any
other U.S. government agency.

For another plain, simple fact: The First Amendment still rules for all
citizens. Amateurs, try as they might, cannot exclude any non-
amateurs from talking about U.S. radio regulations!

Sunnuvagun!

>You've never been a radio amateur, yet you claim to know all about what the
>amateur radio rules should be.

WRONG. Plain, simple wrong.

But, you MUST try to twist the elimination of the morse code test into
"everything" about amateur radio. It's the only real comeback you have.

>You've never had an amateur radio station but
>you act like a guru of all things radio amateurs do, even passing judgement on
>what skills are useful and which are useless.

WRONG. Plain, simple WRONG.

I've had three stations. Two were made out of WW2 surplus radios
and sold for personal profit. The third was in a trade with Stan Wolf
(a ham back in the 60s and 80s) which was an early Heathkit and
became disassembled for parts.

Speaking of the ENTIRE radio world's choice for modes in which to
effect communications will show that morse code is OUT everywhere
but in amateurism. All the other radio services have abandoned
morse (if they ever had it to begin with).

Is amateur radio all about morse code skill? I don't think so, but you
carry on, wounded buffalo sounds and all, like it was.

>You've never talked about working
>for the US State Department nor the US Coast Guard, yet your full of criticism
>for those who have done radio communications for them.

One of my employers, RCA Corporation contracted with the Department
of State on magnetic storage systems (the RACES). One remained
next to my lab's group at EASD in Van Nuys. CA. Two of the contracts
for Position Location Systems were monitored by the USCG, a Lt.Cmdr
being with the group in Houston on a field test.

To anyone IN radio communications (other than amateur), the amount,
number, names of U.S. government communications facilities is an
open thing, accessible to anyone who wishes to look. State and the

USCG have small systems compared to the USA, USAF, and USN.
That's a plain, simple fact. Learn to live with it.

>You've never been a mental health care professional but you sure are quick to
>diagnose other people's alleged "problems".

Aberrant behavior is something spotted by anyone. No "degree"
required. If you think a "degree" is required, you're as nuts as they
are...or so damn ego-filled and thin-skinned you can't take normal
give and take in a newsgroup. :-)

>> Anyone who doesn't like his OPINIONS are treated as
>> lesser beings, "always in error," and given a denigration treatment
>> as if they were unqualified for anything.
>
>Well, you can't be talking about me.

Heavens to gods, of course not! NO ONE can negatively criticize
gods of radio! :-)

>What really tells the tale is how you act when one of your claimed facts is
>proved to be incorrect.

Yes...first of all, I consider the source of the alleged "correction."

If it's a PCTA then "no holds barred." :-)

>Tell us *why* that fact makes any difference to amateur radio. Tell us *why*
>amateurs should copy what other radio services are doing.

Tell us "why" we NCTAs are supposed to justify all our opinions to
YOU, noble spaceman?

YOU tell us "why" U.S. amateur radio MUST continue to re-enact
the 1930s in standards and procedures forever and ever, stressing
that beloved morse code as the ultimate amateur radio skill?

YOU tell us "why" your opinions MUST be considered divine rules
for all amateurs to follow?

>And also note that other radio services *did* use Morse Code extensively in
>their communications - and a lot more recently than the 1930s.

Irrelevant. You KNOW that factoid to be irrelevant to this discussion
but you MUST prize morse code skill till you are blue in da face.

Plain, simple fact: There was NO RADIO prior to 1896.

YOU 'splain to us how you are going to justify that "plain, simple fact?"

>> More "plain, simple facts" (gotta love that headmasterish tone!)
>
>You sure seem to. You talk down to everyone...;-)

Rev. Jim, headmaster of the Church of St. Hiram parochial morse
school, used that "here's a plain, simple fact" over and over and

over and over and over and over and over again... :-)

>> Way back before most of the folks in here existed I learned morse
>> to maybe about 8 WPM.
>
>Really? Got any proof?

I have some 130 proof in the back of my liquor cabinet. That's the
kind of "proof" a lot of the amateurs seem to have in this newsgroup.

Yes, I DO have PROOF OF SOME SLOW MORSE SKILL AT ONE
TIME. Your job, Mr. Phelps, is to uncover the source and reference
of that proof. As always, the Secretary will disavow any knowledge
of your actions. [this tape will self-destruct in 10 seconds...]

>> The minimum rate was then 13 WPM.
>
>So it must have been before 1951. Why are you living in the past?

I'm living in the year 2004. Which year are you in?

Your Tyme Mashine run low on batteries again?

>> didn't keep up with it due to other activities (being a normal human
>> being of adolescent years),
>
>Gee, Len, a lot of us managed to do other activities and were "normal human
>being(s) of adolescent years". And yet we were also hams using and learning
>Morse Code.

Where is your Proof?

>You seem to think that "a normal human being of adolescent years" couldn't do
>that. ;-)

Where is your Proof YOU are a "normal human being?"

>In either case, you don't know squat about Morse code *now*.

Sorry, big radio god, I still do. It is OLD, tired, slow, error-prone
due to human specialists required at both ends of a radio
circuit to encode/decode it.

Plain, simple fact: ALL the other radio services have either given
up on morse code use for communications or never considered
it's use to being with.

>> By the time
>> I was in military communications, I saw what the Big People did on
>> HF and all thought of morsemanship went out the window.
>
>"Big People"? Who are they? Heck, I'm probably bigger than you ;-)

Only as an AMATEUR.

But, you've NEVER worked in the Big Leagues of HF radio
communication so you don't know, do you?

>Also probably stronger, smarter, faster, younger, better looking....;-) ;-)

If you say so. And, you WILL say so. Radio gods are vain.

>I guess the Navy, the Coast Guard, the State Department and the maritime radio
>services of the 1950s, 1960s, 1970s, 1980s and 1990s don't count as "Big
>People" to you. Nor the other radio services using Morse Code.

Show me were the USN used morse code modes regularly on fixed,
point-to-point radio communications in that period.

Fixed, point-to-point radio communications was always the big bulk
carrier of messages. They did that with teleprinter in those days.

But, you were never IN the military service or in the state department
so YOU DON"T KNOW. <shrug> :-)

>And of course we radio amateurs must all be leprechauns...;-) Tell yer buddy
>Vipul about that - he says we hams are "Big People".

I don't have any "buddy" name "Vipul."

Headmasters shouldn't go around taking aphorisms literally.

Shibboleths you spout. Fantasy and myth you spout. You lack
cognizance with aphorisms.

But, we have to go easy with you...you've NEVER been in the
military or government service, yet you "know' all about them and
feel free to criticize those who HAVE been in the military.

>> Never had to use it after that and didn't bother to.
>
>Like the person who drove only automatic-transmission cars since 1952. Or the
>person who never learned to cook and simply ate at restaurants or heated up
>prepackaged meals.

Driving and food preparation have NOTHING to do with morse code.

[did you get some bad stash again? tsk, tsk]

I learned to drive in 1950...with a conventional stick shift, was licensed
to drive in Illinois.

I learned to cook earlier than that...before the "TV dinner" appeared in
the supermarkets.

I understand what you are trying to do in this non-discussion dissing
and refined cussing you are attempting. However, it has NO relation
to morse code whatsoever.

Try again using Military Service? Space business? Any other
commercial or government radio service experience? Go for it!
:-)

Are you running for government office in this General Election? No? Then how can you possibly talk national politics or the differences between Dubya and the River Rat? Or Bush and Kerry?

Oh, yeah, you are Big People in economics! Right! You are very good at dismissing all those economics opinionaters who have different economics opinions.

Lots of good "amateur" discussioning you do. You've not been in ANY of those fields yet you condemn a radio professional for "not knowing anything" about amateur radio. We readers will just put you down as a truly AMATEUR statesman, politician, military leader, economist, and government official. No problem.

But, get more fiber in your diet.

I know more about the space program than you know about Morse Code or Amateur Radio, Len.
>

Sure. That's regulation, not the ARS.
>
> Ergo, ALL citizens can comment on the regulations of the FCC or any
> other U.S. government agency.

Who says they can't? You've spammed the ECFS plenty.
>
> For another plain, simple fact: The First Amendment still rules for all
> citizens. Amateurs, try as they might, cannot exclude any non-
> amateurs from talking about U.S. radio regulations!

I don't want to exclude anybody.

You're the one who wrote:

"Shut the hell up, you little USMC feldwebel!"

You're the one trying to silence people. Not me.

I'm simply pointing out that you don't know squat about what you're talking about.
>
> Sunnuvagun!
>
>>You've never been a radio amateur, yet you claim to know all about what the
>>amateur radio rules should be.
>
> WRONG. Plain, simple wrong.

No, it's quite true. You're full of commentary on How It Should Be - and also How It Should Not Be.
>
> But, you MUST try to twist the elimination of the morse code test into
> "everything" about amateur radio. It's the only real comeback you have.

Not at all. Your comments have ranged far and wide - way beyond the Morse Code test question.
>
>>You've never had an amateur radio station but

No, it's quite true.

> I've had three stations.

They were not amateur radio stations.

> Two were made out of WW2 surplus radios
> and sold for personal profit. The third was in a trade with Stan Wolf
> (a ham back in the 60s and 80s) which was an early Heathkit and
> became disassembled for parts.

Gee - you converted some surplus (I did that before I was old enough to shave)
and took apart some Heathkits.

The fact is that they were not amateur radio stations. You have never had an
amateur radio station, because, by definition, an amateur radio station must be
licensed in the amateur radio service.
>
> Speaking of the ENTIRE radio world's choice for modes in which to
> effect communications will show that morse code is OUT everywhere
> but in amateurism.

Even if that is true (which it probably isn't) - so what?

There are lots of modes that are only used by one service. Nobody uses
multiplex stereo FM except FM broadcasters. I don;t think anyone but hams uses
PSK-31. What is your point about endlessly claiming that only hams use Morse
Code for communications?

> All the other radio services have abandoned
> morse (if they ever had it to begin with).

So?
>
> Is amateur radio all about morse code skill? I don't think so, but you
> carry on, wounded buffalo sounds and all, like it was.

That's just plain wrong, Len. All I've ever claimed is that Morse Code is a
major *part* of amateur radio. That's a fact, and it really bothers you.
>
>>You've never talked about working
>>for the US State Department nor the US Coast Guard, yet your full of
>>criticism

> YOU, noble spaceman?

You don;t have to justify your opinion. I was asking that you *explain* why a
certain fact makes any difference to amateur radio policy. Apparently you know
the fact has no bearing, because you're avoiding my question. Typical, very
typical of you, Len.

> YOU tell us "why" U.S. amateur radio MUST continue to re-enact
> the 1930s in standards and procedures forever and ever, stressing
> that beloved morse code as the ultimate amateur radio skill?

1930s? Did everyone but hams stop using Morse Code in 1940?
>
> YOU tell us "why" your opinions MUST be considered divine rules
> for all amateurs to follow?

You first, Len.

>>And also note that other radio services *did* use Morse Code extensively in
>>their communications - and a lot more recently than the 1930s.
>
> Irrelevant.

Then why do you keep bringing up the 1930s?

> You KNOW that factoid to be irrelevant to this discussion
> but you MUST prize morse code skill till you are blue in da face.

It's not irrelevant at all.
>
> Plain, simple fact: There was NO RADIO prior to 1896.

In the entire universe? Are you sure?

That's right - you still do not know squat about it....

> It is OLD, tired, slow, error-prone
> due to human specialists required at both ends of a radio
> circuit to encode/decode it.

Always so negative? Heck, Len, much of the time people are old, tired, slow, and error-prone. Shall we eliminate people? Or maybe just the "old tired, slow, error prone" people? That's what you seem to want.

You describe yourself as a "weapon of morse destruction". Not morse test...

> Plain, simple fact: ALL the other radio services have either given
> up on morse code use for communications or never considered
> it's use to being with.

"its" use, Len, not "it's". A professional communicator would know the
difference.
>

> differences between Dubya and the River Rat? Or Bush and Kerry?

How can you?
>
> Oh, yeah, you are Big People in economics! Right! You are very
> good at dismissing all those economics opinionaters who have
> different economics opinions.

You do it all the time. Why can't others?
>
> Lots of good "amateur" discussioning you do. You've not been in
> ANY of those fields yet you condemn a radio professional for "not
> knowing anything" about amateur radio.

Are you talking about yourself?

I've not "condemned" you, Len. I've simply stated the fact that you don't know squat about amateur radio or Morse Code. And the truth is - you don't.

> We readers will just put
> you down as a truly AMATEUR statesman, politician, military
> leader, economist, and government official. No problem.

That's all you are, Len. But I'm also an amateur radio operator. You aren't.

> But, get more fiber in your diet.

Why?

Oh, by the way...

You asked earlier:

> Where is your Proof YOU are a "normal human being?"

Here it is:

I've heard some brag about that. But in examining their statements,
many seem to say it with a strange sort of bitterness, like the tests

are really dumbed down, and I memorized the answers, so there is your
proof. I end up taking claims like that with a shaker full of salt.

>
>>Its still easier to simply learn the material.

> 40 meters made of #18 wire is longer than one made of 1" tubing.

Absolutely! Now we've going to have to add bandwidth to the mix, which
was probably inevitable since the question started out with a non
specific frequency, but a wavelength.

So I guess we need to add a 2:1 SWR bandwidth to the question. And the
diameter of the wire - and we have to define it as wire or tubing. Oh
yea, since we're using 2:1 BW, is that at 75 ohms or 50 ohms?

And since the question uses wavelength, does this mean that 40 meters
is 40 meters? That frequency is outside the ham band, at 7.49 MHz. Maybe
that allocation would be better named the 42 or 41.5 meter band.

And all of that is just so much brouhaha anyway. The tested point
should be on if I know the basic calculations for determining antenna
length. All the other stuff is just fun stuff you learn after you have
your ticket.

> who know anything about amateur radio are those with amateur radio
> licenses." Heh.

I just wanted to comment on this one statement.

It is an excellent point you make. And I think you've been trying to
make it for some time.

This is not a court of law, where to be able to give an opinion on
anything, you have to have a doctorate level education, or at least be
certified as an "expert", where a tape measure must be referenced back
to NIST.

This is a newsgroup, and if I can comment and give opinions on the
space program, (which I will do) it would be a severe double standard
for you to get your chops busted for giving an opinion on Amateur radio,
(which you will do)

Whether we agree is another matter. But that's what we are here for.

<rest snipped>

From Yahoo News:

"It actually appears to be working. With pilots in a handful of states, a rising tide of interest in establishing technical and safety standards, and growing political support in Washington, broadband over power lines (BPL) is quietly yet quickly moving from the drawing board into the marketplace."

(Article continues at http://tinyurl.com/5ou5x)

It looks like BPL has won. With the IEEE and the FCC on the side of the BPL'ers, the ARRL doesn't stand a chance in you-know-what.

Of course not, Jim.

But of course Lennie bristles at ANY suggestion that he should have some sort of practical experience in Amateur Radio in order to express an informed opinion.

THEN....Lennie makes inuendo that since YOU aren't an Astronaut, you can't express an informed opinon about IDEAS about space travel.

Rest of Lennie drivvel about supposedly having had his "gloved hand" (ie: Michael Jackon's gloved hand...?!?!) inside some spacecraft.

I hope he got rapped across the knuckles by the tour leader that was conducting the tour...That was HIS only "close encounter" to the space program.

> Because the limited privileges of a beginner license are limiting and should
> encourage a quicker path to upgrade if someone is capable of doing
> so.

That's true of *any* multilevel system. I found my Advanced class
privileges very limiting back in 1968, and could have passed the Extra
then but had to wait two years.

If it's OK to make people get experience for the full-privileges class
of license, it must also be OK for the middle-level license.

Note that in the system I proposed, the entry level license carries
with it a wide selection of privileges. Lots of modes and lots of
bands, including HF, VHF, UHF, CW, digital, and 'phone. Main
limitations of that class would be power and special things like being
a repeater control station.

> I believe the TOP level should/could have time-in-grade as that would
> help set those folks off as not simply having passed the tet, but also
> been operators or otherwise active for N period of time.

Why can't that same logic apply to the middle-level license?

Of course the downside of experience requirements is that it's more
work for the VEs and more FCC administration. With experience
requirements, a new ham would have to do 3 VE sessions to reach full
privileges no matter what, rather than being able to do it all in 1 or
2 sessions as today. (Most new hams today require at least 3 VE
sessions, but a few do make it in less - see AH0A data on new licenses
for an indication of how it's done today).

There's also the fact that simply having the license is no guarantee
of activity or experience.

It took me less than 3 years to go from no license at all to Extra back in 1967-1970. Most of that was the 2 year experience period (time as a Novice or Technician didn't count towards the 2 years back then). Being "a normal teenaged human being", I sure didn't like the wait!

Did I get the Extra too soon? ;-)

>
All depends on the person. Some folks are good with math, some aren't.
I know some people who look at a formula like that on a test and
simply go blank. For them, it may be easier to simply memorize that a
40 meter dipole is about 66 feet, etc.

And the formulas you gave are not exactly correct for all cases.
Conductor thickness and taper change the resonant length. Insulation
on the wire can have an effect, too. Height above ground and whether
it's in a straight line or bent is another factor.

(devil's advocate mode = ON)

Also consider this: Why should we require that hams know such formulas
in the first place? Most of us don't have room for an 80 meter
half-wave dipole anyway, and some can't even fit a 40 meter model.
Most popular HF antennas are multiband, and simple formulas don't work
for them. (What's the formula for a trap dipole or G5RV?)

Why not just look the formulas up in a book or online when needed,
rather than forcing new hams to memorize them? The dipole and vertical
are old antennas - used by Hertz and Marconi, respectively. Even the
G5RV is over half a century old.

Today we have software tools like EZNEC that will tell you a lot more
than 468/MHz ever did. Some of them are even freeware - look a G4FGQ's
'DIPOLE3.EXE' program.

In fact, why are we bothering with the antiquated feet-and-inches
stuff when the future is metric?

(devil's advocate mode = OFF)

IOW, all that really mattered was that the person learned when the
first voice radio communication took place, and the path length.
Everything else was padding.

Sure - but the highlighting is what that student thought was pertinent
for a particular course as given by a particular instructor. It's not
usually guaranteed to be what's on the tests.

> > But if all you know is that there will be questions about Fessenden and the

> Have you ever considered that in some cases he may say something wrong
> on purpose for the purpose of stirring up the ant nest?

Of course! And then he has an opportunity to insult and denigrate
those who point out the error.

OTOH, it's often clear that he sometimes doesn't know jack squat about
what he talks about (like Morse Code), and is enraged when someone he
considers an inferior (which means almost everyone) *does* know, and
points it out to him.

But that's *his* problem, not mine.

> 40 meter dipole is about 66 feet, etc.
>
> And the formulas you gave are not exactly correct for all cases.
> Conductor thickness and taper change the resonant length. Insulation
> on the wire can have an effect, too. Height above ground and whether
> it's in a straight line or bent is another factor.

Yup. You're arguing my case as far as I can see. And when you top that off with some of the electrobabble that goes for solid science in the antenna world these days, it could be a disaster. Granted, antennas are the extreme example of the inability to pin down parameters. But there are plenty of test questions that can be ripped apart this way.

> (devil's advocate mode = ON)
>
> Also consider this: Why should we require that hams know such formulas
> in the first place? Most of us don't have room for an 80 meter
> half-wave dipole anyway, and some can't even fit a 40 meter model.
> Most popular HF antennas are multiband, and simple formulas don't work
> for them. (What's the formula for a trap dipole or G5RV?)
>
> Why not just look the formulas up in a book or online when needed,

> 'DIPOLE3.EXE' program.
>
> In fact, why are we bothering with the antiquated feet-and-inches
> stuff when the future is metric?
>
> (devil's advocate mode = OFF)

The reason of course is that you have to start somewhere. Your devils advocate argument is the sort of thing that can discourage newcomers. "Why should I even bother learning? I wanted a hobby, and this is more like college!"

You learn the simple formula because they are simple, and that simple dipole will probably work well enough.

>>>>>>Okay. So which is the superior method?
>>>>>
>>>>>Depends what you mean by "superior".
>>>>
>>>> Right, but I consider them functional equivalents, so the superiority
>>>>of one over the other is not my concern.

>>>
>>>
>>>But they're not functional equivalents at all.
>>
>> For the purposes of the test, they are the same. As interesting as I
>>found the fact that Brashear made the optical interrupter, the people
>>that made up the test didn't include that on the test.
>
>
> IOW, all that really mattered was that the person learned when the
> first voice radio communication took place, and the path length.
> Everything else was padding.

Kind of a digital outlook there. There are many things worthwhile in the
article. But it was primarily about Fessenden's feat. It would probably
seem a little silly to have a question about "Who fabricated the optical
interrupter for Fessendon's early voice over spark experiments, for
radio oriented tests, when that was quite peripheral to the fact that
his transmissions took place on a certain date.

>>>>>If someone who knows nothing about Fessenden discovers that there are only
>>>>
>>>>two
>>>>
>>>>
>>>>>Fessenden questions in the pool, he/she need only learn two simple facts
>>>>>("first voice transmission date = 1900" and "first voice transmission
>>>>

>>>>
>>>>
>>>>>= 1.5 km = about 1 mile".
>>>>>
>>>>>But if a question pool is not available, the person has to learn a whole
>>>>
>>>>lot
>>>>
>>>>
>>>>>more because there's no telling what Fessenden questions, or how many, will
>>>>
>>>>be
>>>>
>>>>
>>>>>on the test.
>>>>
>>>> and if a question pool is available, the student has to go over the
>>>>entire question pool to learn the few questions that are asked.
>>>
>>>
>>>Except if you have the pools available, you don't even have to read the
>>>paragraphs. Just highlight the right answers to those two questions and you're

>>>set.
>>
>> No doubt you have bought used college textbooks? Lots have the
>>pertinent info highlighted.
>
>
> Sure - but the highlighting is what that student thought was pertinent
> for a particular course as given by a particular instructor. It's not
> usually guaranteed to be what's on the tests.

>>>But if all you know is that there will be questions about Fessenden and the
>>>first voice radio transmissions, you'll read and try to absorb the whole story.
>>>
>>
>> If I didn't know the answer, I'd read a whole item anyhow.
>
>
> Sure - because you're interested.
>
>
>>>>>>If I were to voice my preferences, I would just as soon read a nice
>>>>>>story about Mr. Fessenden than a dry question pool. But functionally the
>>>>>>two are identical.
>>>>>
>>>>>Not really. Heck, I could write at least a dozen different questions from
>>>>>those paragraphs.
>>>>
>>>> the two questions asked were just a sample. Indeed there are a huge
>>>>number of questions that can be gathered from that text. In fact, I
>>>>would credit the author with writing an excellent piece. Interesting,
>>>>with just the right mix of human and technical interest. but I digress....
>>>
>>>
>>>Not at all! It proves the point - if someone knows the exact Q&A, they can
>>>focus on those questions alone, and miss the broader experience.
>>
>> Sure, but you're talking about the broader experience - NOT the context
>>of the test.
>
>
> The difference is that if I know *in detail* what the test will cover,
> it's a different test than if I only know *in general* what it will
> cover.

Okay. and?

>

Amateur Radio Newsline™ Report 1406 July 23, 2004

Amateur Radio Newsline report number 1406 with a release date of Friday, July 23, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Two important youth awards are made and one Georgia ham shares in both of them. Find out who on Amateur Radio Newsline report number 1406 coming your way right now.

(Billboard Cart Here)

**

ANDREA HARTLAGE, KG4IUM, NAMED ARNEWSLINE(TM) YOUNG HAM OF THE YEAR

Andrea Hartlage, KG4IUM, has been named 2004 Young Ham of the Year by the Amateur Radio Newsline. And since this is a story about the success of the younger members of the hobby we asked our 2002 Young Ham of the Year, Josh Abramowicz, KB3GWY, to bring us the rest. Josh:

--

It was only a few years ago that I got a call at the Hawk Mountain Scout Reservation in Schuylkill County, Pennsylvania, telling me to call someone from Amateur Radio Newsline. It was during that phone call, that started out as an interview, I learned of my nomination and selection as the Young Ham of the Year.

Andrea, it turned out, was with her grandparents on vacation in Florida at the time she got the call on a cell phone from Amateur Radio Newsline's Bill Pasternak, WA6ITF. Here's her first reaction after getting the news:

"I'm very happy and excited."

Andrea, who earned her Extra Class license at the age of 14 - less than a year ago , was first licensed in 2000. She's 15 years old and going into her sophomore year at Grayson High School in Grayson, Georgia, north and east of Atlanta, where she's an honor student.

Andrea has been quite active since getting her ticket just four years ago.

"I do a lot of public service with parades and different types of marathons and things like that," she says. "I write the youth column for ARRL website. The Youth@HamRadio.Fun column. I'm assistant section manager for youth of the Georgia section and I'm a member of several local radio clubs."

Andrea is proud of her ham radio activity and is promoting the Amateur Radio service among youth.

"I spoke briefly at the Youth Forum in Dayton and I also led a Youth Forum at the hamfest, the local Rockville hamfest, and I also helped put hamfests on with the Alford Memorial Radio Club," she says.

She's also part of the ARRL's Big School Project and serves as a leader and teacher at the Richards Middle School Amateur Radio Club. There, she teaches electronic theory and has come up with a series of fun games to help reinforce the lessons.

So how did Andrea get started in Amateur Radio? She credits her father with kindling her interest.

"My dad interested me, he introduced it to me, Scott Hartlage, KF4PWI and he introduced me to Amateur Radio - I guess it was four years ago," she says. "I just sort of got interested in the public service side and I also serve as net control and I enjoy doing that and all the other things."

Andrea says Amateur Radio and all the opportunities it has given her, also has opened her eyes to some career possibilities.

"I'm possibly thinking about some kind of journalism and writing these (ARRL) columns helps me develop writing skills," she says. "And, I'm also thinking about some type of communication field that I really enjoy, like, for example, serving as net control and learning how to communicate effectively."

Andrea has made quite an impression on hundreds and hundreds of people already. You can bet it won't be the last time we'll hear from her, now and in the future.

From the 2002 award winner - Congratulations, Andrea, the 2004 Young Ham of the Year.

For Amateur Radio Newsline, I'm Josh Abramowicz, KB3GWY.

--

Andrea Hartlage, KG4IUM, will get her award at a special ceremony on Saturday, August 21st at the Huntsville Hamfest. In addition to a plaque from Amateur Radio Newsline Andrea will receive a gift of Yaesu brand ham radio gear from Vertex Standard and a week at Spacecamp courtesy of CQ Magazine. Vertex Standard and CQ are both major corporate underwriters of the Young Ham of the Year Award program. (ARNewsline (tm))

**

ANDREA HARTLAGE, KG4IUM AND JAY THOMPSON, W6JAY, NAMED TO RECEIVE HIRAM PERCY MAXIM AWARD

At almost the same time that Andrea Hartlage was getting word that she had been named as Amateur Radio Newsline's Young Ham of the

Year
she was also hearing good news from the American Radio Relay League.
So was our 2003 Young Ham of the Year Jay Thompson, W6JAY.
Here's
Amy Abramowicz, KB3IJW, with more:

--

Both Andrea and Jay learned the ARRL's board of directors had selected them to receive the coveted Hiram Percy Maxim Memorial Award.

The ARRL board was so impressed by the nominations for each that they decided to give both of them the award. That means a cash prize of $1,500 each and a special plaque.

Amateur Radio Newsline spoke with ARRL President Jim Haynie, W5JBP. He says there's no doubt Andrea and Jay are the brightest stars among the young hams today.

"Both are just absolutely stellar examples of Amateur Radio and the young crowd that we're trying to encourage at the League," Haynie says. "You couldn't pick anybody any better than these two. And, I'm just amazed at their accomplishments and how they've managed to be so professional in all the things they've done.

"I've read some of their papers and when we chose them as the HPM award winners, what they had accomplished in their brief careers as amateur radio operators. The only thing I would say to young people is use these two people as examples because they are the best. They are the best of the best. And, speaking as president of the League, I congratulate them both and I admire them both because of what they've managed to do."

Mister Haynie also tells us the 1997 Amateur Radio Newsline Young Ham of the Year, Brian Mileshosky, N5ZGT, is in the same class. Brian was the 1999 Hiram Percy Maxim Award winner. He's now 24, married, heading to grad school in the fall, and still very active in Amateur Radio activities in New Mexico.

"All his work in Scouting and DFing and things of this nature that are the epitomy of Amateur Radio again for young people," Haynie says. "When I first met Brian, I was just blown away by his professionalism and how he handled himself as a young amateur. These three young individuals I think set the example and set the standard which we would like to see Amateur Radio go toward."

Mister Haynie says now that the Hiram Percy Maxim selections have been made for 2004, it's soon time to begin identifying candidates for 2005. You can find out more about the award, the qualifications, and the nominating process at www.ARRL.org.

To learn more about Andrea and Jay's accomplishments, you can also check out our website at www.arnewsline.org

For Amateur Radio Newsline, I'm Amy Abramowicz, KB3IJW.

--

We know that all of you join us in congratulating Andrea Hartlage, KG4IUM and Jay Thompson, W6JAY, on being selected top receive these very special awards. (ARRL S.W. Division Newsletter, ARNewsline (tm))

HAM RADIO POLITICS: ARRL BARD MEETING

The naming of Andrea Hartlage, KG4IUM, and Jay Thompson, W6JAY, as winners of the Hirum Percy Maxim Award was only one of many decisions made at the recent meeting of the ARRL Board of Directors. Many of the Boards actions will impact on all of ham radio for years to come. Here's another Abramovich clan -- Mark Abramovich, NT3V, with
that part of the story.

--

In an historic step, the ARRL's board approved the launch of a grassroots lobbying campaign designed to raise awareness among legislators and government agencies about the Amateur Radio service.

ARRL President Jim Haynie, W5JBP, says there was careful deliberation before the board decided to launch the campaign.

"With all the things we have going on right now, such as BPL, our CC&R bill, our Spectrum Protection Act and even the restructuring program that we have it's time to raise our level of visibility," Haynie says.

Haynie says the ARRL board put the directors in charge of appointing volunteers to staff three positions in each division to work as Congressional Action chair, coordinator and assistant.

He says the chair would be someone who has had some experience in lobbying. A coordinator, with the blessing of section managers, would be selected for each state to work with the chair. And, he says, that coordinator would seek assistants to help spread the ARRL's message to congressmen and senators.

"This is a very orchestrated effort and I'm happy to see it happen," Haynie says. "It's something that's been needed to be done for a very, very long time. And it's a good thing, Mark. It really is. It's something we should have done years ago, actually."

Haynie says recent pronouncements by the FCC's chairman clearly pose a threat to the Amateur Radio service.

"I heard Michael Powell say at the NAB (National Association of Broadcasters) conference in Las Vegas this year that everything was on the table," Haynie says.

"All frequencies were on the table for various types of services. "So, Amateur Radio has got to get in there and make sure that it's voice is heard and its importance of the communities that they serve and the people that like to do volunteer work."

Haynie says the league will also ask members to get more active in contacting their representatives in the U.S. House and U.S. Senate to express their views or simply introduce them to the value of the Amateur Radio service in their communities.

"And I'm not asking the league members to do too much, actually, but sit down and write their representatives," Haynie says. "And you don't have to complain about anything. Just tell them about Amateur Radio. Tell them how much it's meant to you and your life and how it may have shaped it or changed it.

"I've said for years some of the finest people I ever met have been through ham radio. But there's many hams out there that have whole careers based on it. And this is too important not to bring the level of visibility to a higher plain."

In other board business, Haynie says there was considerable discussion of Broadband over Power Line internet access and the pending FCC action. Haynie says the board was encouraged that the Alliant Energy BPL trial in Cedar Rapids, Iowa was terminated early because of interference complaints.

He says that move sent a message to other electric utilities exploring BPL.

"It's several dozen utilities now that have looked at BPL and said that it's not something they want to get involved with," Haynie says. "And our message is not economic because they can figure that out for themselves. Our message is the fact that under Part 15, there are certain rules that have to be abided by and we want to make sure that they do that."

Haynie emphasizes the league's position on BPL is clear and consistent and can't be perceived as denying people access to technology.

"We're not against people having broadband access, we're really not," Haynie says. "It's the fact that the interference that this

particular technology would bring to the HF bands is going to be a real problem and we've got to hold people's feet to the fire when they say that they're going to mitigate interference. That goes from the White House all the way down."

Finally, Haynie says he is growing cautiously optimistic about the BPL fight and the impact the ARRL's position is having on the industry and some in government agencies.

"I think that our message is beginning to get out, and, like I say, we're not confrontational" Haynie says. "We're just trying to say look at the facts, look at the engineering studies, look at the NTIA studies and draw your own conclusions. If you've got engineers on your staff, they're quite clear."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

A more in-depth report on the actions of the ARRL Board will appear in an upcoming issue of QST Magazine. (ARNewsline (tm))

**

RADIO RULES: VANITY CALL SIGN FEEE GOING UP

The FCC regulatory fee to obtain an Amateur Radio vanity call sign will rise from $16.30 to $20.80 later this year. According to the ARRL Letter, the FCC announced the new fee in a Report and Order in MD Docket 04-73. Thats also known as the "Assessment and Collection of Regulatory Fees for Fiscal Year 2004" and the FCC says it anticipates 7800 applications for that time frame. The FCC expects revenue collected from the vanity call sign regulatory fees in Fiscal Year 2004 to rise by more than $2100. The Report and Order becomes effective 30 days after it's published in The Federal Register. (ARRL)

**

ENFORCEMENT: CBS SAYS IT WILL NOT ACCEPT SUPER BOWL INCIDENT FINE

CBS says that it will fight any fines leveled against its television stations over Janet Jackson's startling Super Bowl performance. This, according to a top executive with parent company Viacom Inc. on July 19th.

An FCC staff recommendation did not call for fining CBS affiliates that aired the Super Bowl halftime show but are not owned by Viacom. But CBS itself could face a fine of $550,000 or of $27,500 for each of its 20 owned and operated stations that asired the so called Janet Jackson wardrobe malfunction.

Now, in a recent talk before the Television Critics Association, Viacom co-president and co-chief operating officer Leslie Moonves criticiszed any fine as being grossly unfair. He said that CBS considers the idea of a fine as patently ridiculous and that the company will take the matter into court if such a penalty is imposed. (Published news reports)

**

ON THE AIR: SAN DIEGO'S 96.9 MHZ PIRATE REACTIVATES

According to a news bulletin from Chris Carmichael, San Diego's 96.9 MHz pirate is back on the air. No news on the location ofthe transmitter site. (CGC)

**

RADIO LAW: HAWAII'S GOVERNOR VETOES AMATEUR RADIO ANTENNA BILLS BUT OVERICDE MIGHT BE ATTEMPTED

The ARRL Letter reports that Hawaii Governor Linda Lingle has vetoed two Amateur Radio antenna bills. Both pieces of legislation would have provided limited opportunities for amateurs living under private deed covenants, conditions and restrictions to erect antennas.

HB 2773 would have opened the door for amateurs living in condominiums to make arrangements with the homeowners' association board to install an antenna without having to change the CC&Rs. HB 2774 would have granted similar rights to the relatively few amateurs who live under CC&Rs in agricultural-zoned property.

Lingle, a Republican, invoked the same reason for refusing to sign both bills into law. She said that the bills were objectionable because they amount to an inappropriate and unacceptable governmental intrusion into the contractual affairs of the property owners.

But it may not be over yet. According to word from former Westlink News Production Coordinator Bill Orenstein, KH6QX, there is a move afoot to overide the Lingle veto in the Hawaii State legislasture. Orenstein, who now lives in Hawaii could not say when the overide action might take place or if it had any chance of success. (ARRL with additional information by KH6QX)

**

HAM RADIO ON THE NET: HAMBLOG.COM

www.hamblog.com is a new weblog host exclusively for amateur radio operators.

What is a blog you ask? Simply, its a spot in cyberspace where people post their thoughts and ideas on just about any subject. Some blogs let you do just that while others like hamblog.com are targeted to a particular subject. In the case of hamblog.com its our hobby of

Amateur Radio.

Charles Brabham, N5PVL, who administers hamblog.com says that hams have a lot of information to pass on to each other but traditional information systems such as magazine articles or speaking engagements at fests have proven to be unsuitable for. He says that Weblogs are highly flexible and highly individualistic and they hope that hamblog.com will provide a wellspring of knowledge about Amateur Radio that would be impossible to access or distribute by traditional methods.

Oh yes. Charles says that the service is free of charge so go check it out. The URL is simply www.hamblog.com (Via e-mail)

**

HAM RADIO CONFERENCES: THE DCC IN IOWA IN SEPTEMBER

On the ham radio social scene, the 2004 joint TAPR and ARRL Digital Communications Conference will be held September 10th to the 12th. This, at the Airport Holiday Inn in Des Moines, Iowa.

As part of the program, confereence planners are now accepting papers for the published proceedings. Submission are due by August 10th and should be sent tyo Maty Weinberg, ARRL, 225 Main Street, Newington, Connecticut, 06111. You can also e-mail them to maty@arrl.org

And very important. You can even take part even if you cannot be there in person. Thats because you do not have to be present at the conference to have your paper included in the proceedings.

Again, thats the 2004 joint TAPR and ARRL Digital Communications Conference fropm September 10th to the 12th at the Airport Holiday Inn in Des Moines, Iowa. More information is on-line at www.tapr.org/dcc (VHF Reflector)

ARNEWSLINE™ SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, once again with some thank-you's, here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema,

N6TCQ.

--

We'd like to take a moment to thank everyone who helped us during our June
campaign. We heard from Brian Boccardi, N2MPM of North Brunswick, NJ; Lloyd Smith, WA9NLA and the Peace River Radio Association of Port Charlotte, FL; Billy Bryant, Jr., of Harvey, LA; The Reading, PA Radio Club, W3BN; Eric Olena, WB3FPL of Mohnton, PA; monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH; our friends at the Dayton Amateur Radio Association; Mark Otspaih, also from Dayton Ernest Clark in Greenwood, IN; and C. Mark Burlingame, KB9TVD of Northlake, IL

The boss said I only have about a minute, so we'll have to do the rest of the list next week. Thank you to everyone. A reminder that Newsline is a 501c 3 California non-profit corporation. Information on how to support us is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now back to the news. (ARNewsline (tm) Support Fund)

**

RADIO SAFETY: CELLPHONE TAKES BULLET AIMED AT SUBSCRIBER

A South African merchant says he owes his life to the Nokia cellphone he was holding to his ear when he was ambushed by someone in a passing car. Andre Steyn felt the bullet penetrate his hand, only to be stopped by the phone before it could penetrate his head. The entire story is on-line at www.mobilemonday.net/mm/story.php?story_id=3653 (CGC)

**

RADIO ON THE ROAD: THE SHRINKING SYNDROME

If you are finding the size of your car and your mobile rig shrinking, you are not alone. According to Lee Cobb, W6TEE, writing in Worldradio Magazine, the actual size of automobiles has not changed much ion recent years, but the competition for space in front has. As a result, under dashboard mounting of gear is almost out of the question due to such amenities as consoles and such.

But fear not. Lee has some interesting notes on how to conquer the new car lack of space syndrome and ways her has found to get around the problem. You can read all about it on Lee's H-F Mobile column on
Page 31 of the August issue of Worldradio on newsstands right now.

(ARNewsline (tm))

**

HAM CONFERENCES: AMSAT-UK SPACE SYMPOSIUM

And AMSAT - UK is holding a Space Symposium at the University of Surrey from Friday the 30th of July to Sunday the 1st of August. On the Saturday there will be special beginners sessions run by Howard Long, G6LVB, aimed at those wishing to get into the fascinating world of amateur satellite communications. The RSGB GB4FUN van will be on site throughout the event. For booking information and full program details take your web browser to www.uk.amsat.org or contact Jim Heck by e-mail to g3wgm@amsat.org (AMSAT-UK)

**

WORLDBEAT: DXPL NOW ON WRMI

Turning to news from around the world, this item for hams and SWL's
who listens to the D-X Party Line show. Allan Graham, who hosts the DX Party Line has announced that the show will now be carried by WRMI each Sunday at 0300 U-T-C. That's 11 PM Eastern and 8 PM on the West Coast on Saturday here in the U-S-A. The frequency to listen on is 7.385 MHz.

WRMI is oned by the Florida based Radio Miami International and is heard throughout the Americas -- from Alaska to Tierra del Fuego -- in English, Spanish and other languages. The new schedule for the DX Party Line was slated to begin on July 24th. (ASWLC)

**

WORLDBEAT: SAQ NAMED WORLD HERIRTAGE STATION

SAQ, the Alexanderson alternator VLF transmitter at Grimeton in Sweden has been declared a World Heritage site by UNESCO. According to the RSGB News, the decision was made by the World Heritage Committee of UNESCO at a meeting near Shanghai in China on the 2nd of July.

S-A-Q continues to make occasional transmissions on 17.2 kHz on CW. The last one was on the 4th of July. (RSGB)

**

ON THE AIR: NEW PROPAGATION BEACONS IN CM88

Some new propagation beacons to report. K7XC reports over the VHF Reflector that as of 05:00 U-T-C on July 19th the KJ6KO 2 meter, 1 and 1/4 meter and 70 centimeter beacons in grid square CM88 are all clearly audible at his home in Fallon Nevada. Thats grid DM09.

The new beacons operate on 144.282 at 40 watts into a pair of loop antennas. The 1 an d 1/4 meter unit is on 222.014 with 25 watts into two stacked loops and the 70 centimeter beacon runs 100 watts into four stacked loops on 432.292 Mhz. KJ6KO says that he would apreciate any Q-S-N reports. Send them to his Callbook address. (VHF Reflector)

**

DX

In D-X. word that members of the United Kingdoms Wrexham and District Amateur Radio Society will be operating from the Isle of Man froom September 1st through the 8th. The exact operating location will be Scarlett Point which isd a decomisdsioned Coast Guard look out tower, approximately 1.5 miles South of Castletown, Isle of Man. Operation will be on all High Frequency Bands, plus 50Mhz, 70Mhz, and 144Mhz, at full UK Power. The team is expected to operate on at least 2 H-F Bands simultaneously, and will be running CW, SSB, RTTY, PSK and some SSTV. More is on the teams website at www.gb4iom.co.uk (GB2RS)

Also word that Andorra is now on 6 meters. According to ON4IQ, Andorra has released the 6 meter band to all resident amateurs. He reports that C31JI and C31HK are both already active on the band. (GB2RS)

**

THAT FINAL ITEM: SOMALIA GIVES HAM RADIO INCREASED POWER LIMITS

And finally this week, the ARRL Board Meeting was not the only place where things were ham radio changes were happening last week. Another was the nation of Somalia which has acted to grant its ham radio population a power increase to 3 kilowatts. Thats right. We said 3000 Watts and thats 3000 P-E-P for SSB and 3000 watts average for other modes. Somalia is also letting hams use of the 88 to 108 Mhz band for F-M and permitting Amateur Television broadcasts to be conducted on any unoccupied standard VHF or UHF television channel. WIA newscaster Graham Kemp, VK4BB, has more:

--

Yes the Ministry of Information, Telecommunication and Culture in Somalia has made these changes and more as part of action to implement the W-R-C 2003 accords.

And the Ministry has also made additional frequency allocations for amateur radio experimenters in Somalia. Radio Amateurs in that nation can operate on additional bands including Zero to 9 Kilohertz, from 70 to 90 Kilohertz and 130 to 190 Kilohertz. On Medium Wave frequencies include 495 to 526 Kilohertz, while on the High Frequencies the hams of Somalia get 5.060 to 5.450 MHz and 26.100 to 29.700 MHz excluding 27.995 the sliver band from to 27.999.

This Ministry is promoting Somalia as the best holiday and research destination for visiting radio amateurs. This, as a way of attracting skilled people to help the local Somali people become ham radio operators. Abdikariim Ali Sulatn in Puntand State Somalia confirmed again that Aussie Amateur Sam Voron, 6OA, will continue to conduct ham radio license qualifying courses and issue amateur radio licenses free of charge "in the name of this Ministry" until a national Somali Amateur Radio Society is formed.

And, oh yes. If you are planning to go there, a Somali Visitors Amateur Radio License is now issued to any class of overseas amateur radio license holder as a courtesy. It is free of charge and issued for life unless canceled by the Somali Government. Talk about an inducement to visit a far off land.

Reporting for the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, for
the WIA News, in Brisbane, Australia.

--

According to a Somali spokesman, as of now, no other country provides radio amateurs with more frequencies or a higher transmitter power output. He added that Somalia welcomes visiting radio amateurs from throughout the world. (WIA News)

>>

>> In fact, why are we bothering with the antiquated feet-and-inches
>> stuff when the future is metric?
>>
>> (devil's advocate mode = OFF)

>The reason of course is that you have to start somewhere.

Why?

We've been told amateur radio is "just a hobby". Why should hobbyists have to learn all sorts of stuff like formulas that are in books just to get a license? If someone uses a poor antenna, they won't cause interference or disrupt other communications.

Fun fact: 40 and more years ago, there were few if any antenna questions on the General and Novice tests.

>Your devils
>advocate argument is the sort of thing that can discourage newcomers.

How?

>"Why should I even bother learning? I wanted a hobby, and this is more
>like college!"

The next time somebody describes ham radio as "a hobby" or "just a hobby", think about what they're *really* saying.

In truth I'm all for good technical written tests. But the devil's advocate argument shows that it's all opinions.
>
>You learn the simple formula because they are simple, and that simple
>dipole will probably work well enough.

How many hams actually put up single-band dipoles anymore?

>> IOW, all that really mattered was that the person learned when the
>> first voice radio communication took place, and the path length.
>> Everything else was padding.
>
>Kind of a digital outlook there. There are many things worthwhile in the
>article. But it was primarily about Fessenden's feat. It would probably
>seem a little silly to have a question about "Who fabricated the optical
>interrupter for Fessendon's early voice over spark experiments, for
>radio oriented tests, when that was quite peripheral to the fact that
>his transmissions took place on a certain date.

Right! But the point is that the person who just wants to pass the test is going to look for the most efficient method.

And heck - some folks who claim to be knowledgabel about radio will get that question wrong!

>> The difference is that if I know *in detail* what the test will cover,
>> it's a different test than if I only know *in general* what it will

>> cover.
>
> Okay. and?

Better testing means more knowledgeable hams. And the reverse.

Hello, Mike

A lot of us argue in different directions; I do have a question,
however. Why, oh why, does a newly licensed amateur ask the question
"can I use my 10/11 meter amp that I used as a trucker on 2 meters"?

Another example "I want a 150 watt amp on the output of my 75 watt two
meter rig. The amp I am looking at wants 50 watts in." Obviously, it
might be a great deal easier, not to mention cheaper, to get a better
antenna than a 1/4 vertical. It would help reception too, but that is
often not considered. As long as "I can talk a long way".

To my way of thinking, some of these folks are looking to damage their
gear (of course, both questions are far better asked than simply
experimenting). Obviously, newcomers are not going to be fully aware
of many aspects of radio, but if they should pass the 5 WPM code test,
it isn't too much of a stretch to think such questions could be posed
by extra class license holders (since pre-teens have been known to
pass the extra). In fact, I've seen some "interesting" questions
posed by an extra class holder, I just can't remember it right now.

In one case, the individual posing a question asked if an amp can be
used on other "meters" (unaware, apparently, that bands are often
referred to in general by their wavelength and that wavelength is
determined by frequency as well as the speed of light). Believe me,
I'd rather folks ask the questions; my only question is if the tests,
for whatever reason, might just be a tad too easy.

Back to that question on 10/11 meter amps - it would seem difficult
that a licensed individual would even consider that an amp designed
for perhaps 26 to 30 MHz (illegal as it may be), would even have a
remote chance of working at *five* times that frequency.

Again, I am *not* trying to put that individual down; I'm glad the
question was asked. I'm just concerned with the depth, or lack
thereof, of our "tests".

Best regards from Rochester, NY
Jim - AA2QA

If you truly believe that, then I feel sorry for you.

Ham radio, like Life itself, is a big mirror. You get back exactly
what you put into it. Personally, I've chosen to be involved in disaster
preparedness -- more specifically, how the amateur radio SERVICE can be
of help in times of nastiness.

I've also gained a great deal of enjoyment from the technical side
of the hobby. Translation: I've been a 'tinkerer' most of my life. My
specialty now sits with helping others get good use out of 'legacy'
commercial gear in terms of converting it to amateur service.

If you truly believe that amateur radio is "dead," then perhaps it
is truly dead for you.

That being the case, perhaps you would be happier with another
hobby.

That's the suggestion I always make to whiners and complainers.

Like any other organized activity, Ham Radio is always improved when the whiney types are told in no uncertain terms that it is "Time to make like a cow-pattie and hit the trail."

Splat! - goes the girly men! And good riddance, I say!

Charles, N5PVL

Not really. We have amps that work from 160 through 10 - that's a frequency
range of over 16:1. Why not a 5:1 range?

The disturbing thing is the complete an unquestioning acceptance of operation that clearly violates the rules.

>Again, I am *not* trying to put that individual down; I'm glad the

"A mile wide and an inch deep"

I share your concern. It isn't that the tests don't cover enough; it's that the test *methods* allow such ignorance to slip through.

>>
>>
>> Of course, but the point is that not everywhere else treats a passing grade
>> the same way.
>
>Well, not really. Your grad school considered a passing grade a B or
>above. Below B was not passing.

Not really. You needed a B *averaged over all subjects* to stay in the program.
But you could get a C in one course (passing grade for a course) and an A in
another, and stay in the program because the *average* was a B.

>>>>Yep. That's the downside. The upside is that there is no chance for
>>>>bias or interpretation of an answer - you either got the right one or

>> 40 meters made of #18 wire is longer than one made of 1" tubing.
>
>Absolutely! Now we've going to have to add bandwidth to the mix, which
>was probably inevitable since the question started out with a non
>specific frequency, but a wavelength.

A lot depends on the question and answer choices. For example, compare:

"What is the approximate length of a half-wave dipole for 7.15 MHz made from
#14 copper wire?"

A) 40 feet
B) 40 meters
C) 66 feet
D) 100 feet

to

"What is the approximate free-space length of a half-wave dipole for the center
of the 40 meter ham band made from #14 copper wire?"

A) 65 feet
B) 66 feet
C) 67 feet
D) 68 feet

Which requires more knowledge?

>So I guess we need to add a 2:1 SWR bandwidth to the question. And the
>diameter of the wire - and we have to define it as wire or tubing. Oh
>yea, since we're using 2:1 BW, is that at 75 ohms or 50 ohms?

Depends on the wording. See above.
>
>And since the question uses wavelength, does this mean that 40 meters
>is 40 meters? That frequency is outside the ham band, at 7.49 MHz. Maybe
>that allocation would be better named the 42 or 41.5 meter band.
>
Or maybe we expect a ham to know that "40 meters" refers to the 7.0-7.3 MHz ham
band..

You see how a question/answer set can be worded to require more or less
knowledge and understanding?

>And all of that is just so much brouhaha anyway. The tested point
>should be on if I know the basic calculations for determining antenna
>length. All the other stuff is just fun stuff you learn after you have
>your ticket.

Not really. If a ham thinks s/he can just cut an antenna to the formula length, put it up any old way and expect it to work perfectly the first time out, there may be a lot of frustration and problems.

>>>>We *can* have an effect. I've taught ham radio classes, code and
>>>>theory, but I won't teach a "license in a day" class, nor endorse one.
>>>
>>>>>And I suspect that almost all new Hams try to do this the right way.
>>>>

>>>
>>>Yeah, Len just busted my chops! 8^)
>>>
>>
>> Len who? ;-)
>>
>> What's his call?
>
> Oh shucks, I'm not worried about his license status.

I'm not either. But when someone without a license makes a career out of busting other people's chops who do have said license, ya gotta wonder...

Hmmm - Who are 'they' and what exactly are they 'really' saying? This sort of statement appears in many of your posts, Jim - you seem to see a negative connotation to the word "hobby", as applied to Amateur radio.

Although it may be otherwise for you, Jim, Amateur Radio is essentially a hobby activity. Some choose to apply the skills that they have learned while participating in the hobby in other related (and outside the boundaries of the Amateur Radio Service) areas - public safety or MARS, for example - but a hobby it remains, by definition:

http://dictionary.reference.com/search?q=hobby

Hobby: An activity or interest pursued outside one's regular occupation and engaged in primarily for pleasure.

That sounds like an excellent description of the essence of Amateur Radio to me! Apparently, the Amateur Radio associations agree - quotations from the ARRL, RAC, RSGB and WIA web sites follow:

ARRL - http://www.arrl.org/hamradio.html

"Here's your invitation to a friendly, high-tech hobby that's got something fun for everyone! You can become an Amateur Radio operator--no matter what age, gender or physical ability. People from all walks of life pass their entry-level exam and earn their Amateur (ham) Radio license. They all share the diverse world of activities you can explore with ham radio. "

Radio Amateurs Of Canada - http://www.rac.ca/regulatory/arast.htm

"Here's your invitation to a high-tech hobby that has fun for everyone. Amateur Radio operators are people from all walks of life--no matter what age, gender or physical ability. And, getting started in Amateur Radio has never been easier! You can usually find an amateur radio class in your area sponsored by friendly volunteers who will help you learn the ropes."

Radio Society Of Great Britain - http://www.rsgb.org/

"Amateur Radio is a unique, fascinating and friendly hobby that captivates the interest of millions of people around the world. It encompasses a huge range of activities, from people communicating with someone down the street, people tinkering with old radio right up to those talking to the International Space Station using the latest digital technology. Many Radio Amateurs are working at the cutting edge of radio communications technology whilst others prefer just to tinker with old radios."

The Wireless Institute Of Australia - http://www.wia.org.au/pr/vk5.pdf

"Amateur Radio - A Hobby For Now And The Future" (an excellent document for those considering getting into the hobby - well worth a read)

And what an incredible hobby it is! Nothing wrong with that.

I think that some of these questions asked in ignorance are related to an emerging group in society. THat is people that are "going it alone". There is a good book out, named "Bowling Alone", which gives some insight into the phenomenon.

These people are getting their licenses in a vacuum, so to speak. They are studying test material, and take and pass their tests, and have no practical experience or other learning to back it up.

So you can have a newly minted Extra class Ham with NO other electronic experience.

Now is the testing process' fault? Emphatically, NO. The deficiency is in the lack of mentoring. The Elmer is not as prevalent as he/she once was. The amount of knowledge to be knowledgeable is way beyond any three test regimen. I know in my case, I have learned so much more through my interactions with more experienced hams than I could have ever hoped to in three tests.

That is why I like the idea of "time in grade" before advancement. This way, the advancing amateur has the chance to absorb some knowledge.

> Another example "I want a 150 watt amp on the output of my 75 watt two

> pass the extra). In fact, I've seen some "interesting" questions
> posed by an extra class holder, I just can't remember it right now.

Me too. And if you look at most of those questions, they show inexperience. That's why I keep coming back to the "time in grade" thing. I know a couple extras that had no HF experience until after getting their Extra license! They had to be taught the structure of a QSO. And were frankly embarrassed about it.

That is why I like that two year wait between General and Extra. The amateur that upgrades will certainly be interested enough, and not likely to have just put his/her license in a drawer for that two years. Along the road, they will no doubt have picked up some valuable experience. This WILL include the new General asking a few eye-rolling questions.

But it is up to those of us that have more experience to be kind about it. And I consider myself to be one of the lesser experienced Hams. I have 30+ years of electronics experience, but except for one early job, I've mostly been a computer jockey. So I'm now learning a lot about RF.

> In one case, the individual posing a question asked if an amp can be

>
> Again, I am *not* trying to put that individual down; I'm glad the
> question was asked. I'm just concerned with the depth, or lack
> thereof, of our "tests".

My overall view is that we have to step back and take a long look at exactly how much we do know about the Amateur radio/RF subject. Then try to figure out how to put that in a testing regimen. To me, it is pretty certain that there is so much material to learn and go over that it is pretty near impossible to put into 3 tests without making the tests so grueling that it is a near certainty that anyone would pass it, plus no one would want to administer it. That is why I think the time in grade would go a long way towards making for more knowledgeable Hams. Perfect system? Not hardly, but it should help.

Could you outline a test methodology that would allow the Passing Hams
to be knowledgable about all such things?

Of course it would have to be palatable to both VE's and potential
Ham's/Upgrades.

I'm saying that to test for substantial RF competence, there would have
to be much more than three tests, and they would be huge.

I really do like my "time in Grade" and more active Elmering idea.

In fact, I would challenge those that believe that the ARS is so dumbed
down to get of their kiesters and try to make the dumb new Hams smarter!

I kinda think it was a whole bunch of reasons, Bill, not just the digital
stuff. The FM/repeater boom preceded the rigs you describe by about a decade.

Here in EPA/SNJ/northern DEL, there was plenty of amateur VHF/UHF way back in the AM/tube days. Other parts of the country may have been way different for various reasons, such as terrain and population density.

But in those times, VHF/UHF was not the usual starting ground for new hams unless they were specifically interested in it. Most new hams after 1951 started out as Novices on HF CW, "graduating" either to Tech or General.

I think that all began to change with the FM/repeater boom about 1970. Repeaters are natural "watering holes", and the ease/reliability of mobile/portable operation with a modest setup were big selling points. At least around here, AM (predominantly 6 meters) was rapidly replaced by 2 meter FM in the early-mid 1970s. A lot of folks began to go straight for Tech back then because Novices couldn't use 2 meter repeaters.

My point was that I don't see any problem in letting qualified beginners get started on HF as well as VHF/UHF.

There are people around who put on armor and joust every weekend, but
that doesn't mean that knights are making a comeback. It just means
that the members of the Anachronistic Society happen to enjoy it, the
same way that some people collect toothpicks.

In that same sense, ham radio will never die. The ARRL has taken up
the function of the Anachronistic Society and it organizes the
equivalent of jousts with activities like field day. But that doesn't
mean ham radio is mainstream any more; it just means that some
potential toothpick collectors have chosen radios instead.

There is no methodology that would *guarantee* such knowledge.

But here are some possible improvements:

1) Increase the size and "depth" of the question pools. Focus on the basics
rather than trying to cover everything at a perfunctory level.

2) Increase the number of choices in the multiple choice from 4 to 5 (reduces
possibility of guessing right)

3) Change the scoring so that a wrong answer carries a negative score value
equal to 1/5 of the positive value of a correct answer.

4) Divide the elements into subsections so that one cannot get a passing grade
with complete ignorance of a certain area.

5) Eliminate or at least discourage "license in a day" classes.

6) Disallow retesting at the same VE session

>Of course it would have to be palatable to both VE's and potential
>Ham's/Upgrades.

Well, that leaves out all of the above...

>I'm saying that to test for substantial RF competence, there would have

In the context that I see the comment ("Ham radio is just a hobby"), what is
really being said is something like one or more of these:

"Don't take ham radio seriously"

"Don't expect hams to be technically knowledgeable/operationally skilled/(fill
in the blank of whatever is being discussed)"

"Don't criticize anyone for what they do or don't do in ham radio (even if it's
sloppy or possibly illegal)"

"Don't try to justify or even describe ham radio as a source of public service
or other benefit to society other than as recreation"

In other words, the phrase is often used as an argument against almost anything
the user of the phrase doesn't want to do.

>This

(definitions snipped)

FCC Part 97 does not use the word "hobby" even once. I doubt the Canadian regulations use that word, either (IIRC, Industry Canada is the regulatory agency?)

I haven't read all of ITU-R, but I don't recall ever seeing the word "hobby" used in connection with the ARS there, either.

Here's another angle:

Right now our biggest threat is BPL. Would you recommend that we describe Amateur Radio as a hobby in our attempts to combat the BPL problem? If we do, what do we say when the BPL folks come back and say something like this:

"You folks *describe yourselves* as hobbyists. We intend to serve both business and personal uses via broadband internet access. Why is *your hobby* more important than our business and personal customers? Why should a *hobby* take precedence over our customers?"

Or how about antenna restrictions? Try telling a planning commission, HOA, or zoning board that they should allow a variance for your "hobby".

"Avocation" is much better word, I think.

Ah - but when they send him money, they expect that it will go to pay the expenses of the cost of reporting, not that it will go into his own pocket. It's the fact that he won't disclose to his contributors that he is paying himself a salary [and how much] that is most objectionable.

I didn't open the "flood gate." The FCC did when they amended their regulation
to ALLOW occasional NWS retransmission over amateur frequencies.

I only questioned the wisdom of the apparent limitation of allowing the retransmission of weather related emergency messages while disallowing the retransmission of non-weather emergency messages such as "amber alerts" which are messages indicating an immediate threat to life or property. I personally believe that such is wrong, because although .113(e) doesn't permit it, .403 of our regulations does (additional conditions ignored).

I would say that "once in six months" is "occasional" enough. That is roughly how often there has actually been an Amber Alert in my area - Southern California.

> A control operator needs to hear it, decide it's valid, then put it on the
> air.

I disagree that it needs to be heard first. Why? 1) Repeaters (to which the device would be interfaced) may be automatically controlled. That means that at best, all one needs is a control-op who can shut off the repeat function as a violation occurs. 2) NWS originated transmissions are ALLOWED to be retransmitted per .113(e), and messages indicating a threat to life or property are allowed per .403. Unless someone hijacks the NWS transmitter to send out a false signal (that act itself a violation), there should NEVER be any signal from that source whose content violates the rules. As for the duration of the retransmission, the automatic control can be programmed (actual equipment notwithstanding) to retransmit ONLY upon first broadcast of the message and upon control of a control-op manually, not continuously thereafter.

Therefore, where's the rules violation to be prevented that implies that there should be a "pre-screening" of the message that you state should happen.

> Otherwise you just have a system that breaks in whenever IT wants to,

> I reiterate...HOW do you meet the prerequisite of "occassional" if the
> repeater is set to retansmit any SAME alert "automatically"...????

Who said that it will retransmit ANY "same" alert? Look at the equipment. It can be programmed to respond to only certain alerts. Have you even bothered to look at the specific item that the original post and response by the FCC was about?

Except for the periodically scheduled test signals, there is no regularity nor continuity to SAME encoded alerts. Why do you think otherwise? Your question makes me draw a conclusion that you don't even understand what SAME encoded alerts are about.

My error on the callsign, and possibly on the reference. Your identity popped into my head as I made that response, but it's possible that someone else's thought is what I was replying to.

> Please show where I did...

Some people think that NO retransmission is ever possible because they equate "occasionally" to never.

As Jim has pointed out there was a big earlier phase Bill. The move to two meter FM, which is where it all started, came when Motorola and GE started selling their new solid state commercial and public safety vhf gear in the early '60s which quickly replaced the *huge* piles of tube-type gear then used in the profesional services. The net result was a treasure trove of cast off but quite usable equipment for junk prices. And of course hams jumped all over that opportunity, we is what we is, and the 2M FM boom was on.

Those were almost all single-freq xtal controlled radios running simplex (as if we had any options . .), mostly on local club "channels". Not even a Nixie in sight. Sorry Bill. Heh.

Other sources of 2M FM equipment also became available in that timeframe, "Tweaked" 25W solid state gear sold for use on the then-new 160+ Mhz VHF FM marine band was one. Those were inexpensive easily hacked consumer-level radios which had the ability to to switch-select several xtals, big improvement, etc.

The repeaters came just a bit later. Another importation of the existing technologies used by the professionals in those times. It was in this timeframe that the (obscure) hams who earned their daily bread by serving the VHF professional services came to the fore and midwifed the earliest 2M ham repeaters into existence.

Us "classic" 20wpm lowband beepers and yakkers, being fundamentally clueless and previously disinterested in their game followed their lead. Sheep. I might point out here that many if not most of those folk were 5wpm Techs.

> I kinda think it was a whole bunch of reasons, Bill, not just the digital
> stuff. The FM/repeater boom preceded the rigs you describe by about a decade.

Right.

We're in the same neighborhood James, I was there and I don't agree with that. 6M AM died a quiet death around here for neighborhood comms

circa 1958-1960, replaced by 2M AM.

> A lot of folks began to go straight for Tech back then
> because Novices couldn't use 2 meter repeaters.

Agreed!

Now, how could that be done?

And how would you convince the FCC to do it, after 20 years of open pools and the use of open pools by the FAA and others?

Most of all, how would you prevent "Son Of Bash" from making them open again?

If people (a) send him money and (b) are happy with what they get for
thier money, who is Dieter Stussy to say it's objectionable...?!?!

Obviously you don't send him any money.

Obviously too, is that he >>IS<< spending the money in such a way as to
continue to perpetuate Amateur Radio Newsline.

I am sorry, Dieter...You have not presented anything here that would
"prove" that Bill Pasternak is using the funds provided to him for improper
purposes.

You're going to have to back up these ludicrous allegations with some
verifyible facts if you are to have any credibility in your arguments against
him, Dieter. So far the evidence is that Bill Pasternak and Company provide a
reliable and reputable service.

>our regulations does (additional conditions ignored).

Amaber Alerts can be more effectively distributed as a secondary audio
program on those same NWS systems, Dieter...IF for no other reas than the fact
that the general public can more radily afford NWS radios than they can Amateur
Radio transceivers.

>> How are you going to meet the criteria of "occassional retransmission"
>> otherwise, Dieter?
>
>I would say that "once in six months" is "occasional" enough. That is

>about?

Yes, Dieter, I have.

There's still no reason, practical or technical, to rebroadcast these
alerts.

If "Joe Ham" hears one and think it's worthy of putting on the air, (s)he
can broadcast a "QST" if they choose to do so...

>Except for the periodically scheduled test signals, there is no regularity

I was licensed in 1967 and there was still plenty of 6 meter AM activity. well
into 1970. Lots of Utica 650s and Poly Comms in use; some folks even ran Swan
250s on 6 m SSB. FD 1968 WA3CCP (club call): I personally made over 100 6m AM
QSOs using a Lafayette (!) HA-460 and 5 elements at 40 feet or so.

A *lot* of hams I knew made the jump from 6 M AM direct to 2 M FM soon after,
though.

>
>The Japs got it right. Free pass, ten watts out max, go play radio.

You might want to look at how JA licenses and newbies have dropped in the past
ten years:

http://www.ah0a.org

The number of new JA hams has dropped like a stone; the number of station
licenses is way down and JARL is now smaller than ARRL. They're imploding - and
code tests are not the reason.

Well, it could be, depending on the context - but I don't believe that
the sources that I quoted (ARRL et al.) meant it in any sort of
negative way!

>
>>This
>>sort of statement appears in many of your posts, Jim - you seem to see
>>a negative connotation to the word "hobby", as applied to Amateur
>>radio.

>
>Not to the government!

Well, not using that precise phrasing, perhaps - the FCC words it like
this on their website:

"The amateur and amateur-satellite services are for qualified persons
of any age who are interested in radio technique solely with a
personal aim and without pecuniary interest."

Something that one does entirely for their own interest, and not for
compensation, is within the definition of "hobby":

http://dictionary.reference.com/search?q=hobby

Hobby: An activity or interest pursued outside one's regular
occupation and engaged in primarily for pleasure."

>
>>Some choose to apply the skills that
>>they have learned while participating in the hobby in other related
>>(and outside the boundaries of the Amateur Radio Service) areas -
>>public safety or MARS, for example - but a hobby it remains, by
>>definition:
>
>(definitions snipped)

...presumably because all of them, including the ARRL themselves,
refer to Amateur Radio as a hobby activity.

Which I have absolutely no problem with - that's exactly what it is
for me! It ain't my job, and I do it because I like it and find it
interesting - simple as that.

>
>FCC Part 97 does not use the word "hobby" even once. I doubt the Canadian
>regulations use that word, either (IIRC, Industry Canada is the regulatory
>agency?)

They are indeed!

>
>I haven't read all of ITU-R, but I don't recall ever seeing the word "hobby"
>used in connection with the ARS there, either.

The Government sites use regulatory and formal language (as
governments are wont to do!) on their websires and in their literature
- the above quote from the FCC illustrates this. Means the same
thing, though!

>
>Here's another angle:
>
>Right now our biggest threat is BPL. Would you recommend that we describe

>and personal uses via broadband internet access. Why is *your hobby* more
>important than our business and personal customers? Why should a *hobby* take
>precedence over our customers?"

You don't think that we could fool 'em by describing ourselves as
"avocationists", do you? I'm sure the BPL folks have a pretty good
idea of what Amateur Radio is by now.....

BTW, do you believe that any sort of case we could make would sway the
BPL folks to abandon their business plans and walk away from it? "Oh,
we're sorry, we thought that you guys were just hobbyists....now that
we understand that this is your avocation, we'll shut down our network
right away. Sorry we bothered you!" Hmmmm.

It's the regulators who we are dealing with on this issue, and they
know precisely what Amateur Radio is!

>
>Or how about antenna restrictions? Try telling a planning commission, HOA, or
>zoning board that they should allow a variance for your "hobby".

Would you suggest that calling it something other than a hobby would
fool the city planning department or HOA lawyers for very long?

>
>"Avocation" is much better word, I think.

Actually, it means exactly the same thing:

http://thesaurus.reference.com/search?q=avocation

Entry: avocation
Function: noun
Definition: hobby

A rose by any other name......

Words have power beyond their dictionary definitions. Otherwise we wouldn't have so many.

It's elemetary.
Who has the biggest axe to grind against MS?
Which company has been putting licensing pressure on open source code?
Who stands to gain most from the increased unpopularity and insecurity
of MS products?
[not that I have any affection for MS you understand, but it's simple
logic]

>provide
>to any other person or entity, any material, in whole or in part, of any
>Commission examination."...Or legalistic language of similar verbage...

You need to add "except as part of the examination process."

One way this could be done is for the existing pools to become study guides, and new pools to be created which would be similar but not identical to the existing pools. The new pools would only be available to the VEs and FCC, both of whom would promise to keep them secret.
>
>>And how would you convince the FCC to do it, after 20 years of open pools
>>and the use of open pools by the FAA and others?
>
> Uhhhhhh.......NPRM...?!?!

??

An NPRM is created *by the FCC* because *they* think a regulatory issue needs to be addressed. That brings us right back to the original question: How would *you* convince FCC that there needs to be a change?

>>Most of all, how would you prevent "Son Of Bash" from making them open
>>again?
>

>Prison and fines. Like it should have been done in the 1970's.

Which would require more FCC regulation and enforcement. The 'conservative' argument is always for *less* regulation and more "get the government off our backs".

Heck, it's tough selling them that BPL is a bad idea...

1139. Andrea Hartlage (KG4IUM) named 2004 Amateur Radio Newsline™ Young Ham Of The Year

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-25 18:06:42 UTC
From: radionews@aol.com
Message-ID: <20040725140642.26512.00002193@mb-m03.aol.com>
Source record: 94815

Andrea Hartlage (KG4IUM) named 2004 Amateur Radio Newsline™ Young Ham Of The Year

(Los Angeles, CA) She is 15 years old, about to become a sophomore in Grayson High School in Grayson, Georgia where she holds a 96.41 Grade Point Average and has dedicated the last four years of her young life to serving the needs of her community and its youth through Amateur Radio. For that reason and many others, Andrea Hartlage (KG4IUM) has been selected to be the recipient of the 2004 Amateur Radio Newsline™ Young Ham of the Year Award.

Andrea was first licensed in 2000 and currently holds the Amateur Extra class which is the top of the line. She credits her father with kindling her interest.

"My dad interested me, he introduced it to me, Scott Hartlage, KF4PWI and he introduced me to Amateur Radio - I guess it was four years ago," she says. "I just sort of got interested in the public service side and I also serve as net control and I enjoy doing that and all the other things." (A "net control" is the person in charge of a group of ham operators performing emergency or public service communications.)

Andrea has been quite active since getting her FCC license just four years ago.

"I do a lot of public service with parades and different types of marathons and things like that," she says. "I write the youth column for ARRL website...I'm assistant section manager for youth of the Georgia section and I'm a member of several local radio clubs." The ARRL is the American Radio Relay League, the National Association for Amateur Radio, based in Newington, Connecticut.

Among her many achievements, Andrea has served as an instructor at J.E. Richards Middle School Amateur Radio Club as part of the "ARRL Amateur Radio Education & Technology Program." The program's goal is to improve the quality of instruction by providing an educationally sound curriculum focused on wireless communications. The project emphasizes integration of technology, math, science, geography, writing, speaking and social responsibility within a global society. Andrea's instructional work at the J.E. Richards Middle School Amateur Radio Club was part of the pilot program.

But Andrea's work in the area of recruiting youngsters into the Amateur Radio hobby goes far beyond her local community. She is an

internationally known writer with a monthly on-line column titled "Youth@HamRadio.Fun" and also authors a similar bi-monthly column for the Young Ladies' Radio League (YLRL) Newsletter, YL-Harmonics. As a public speaker she has appeared at the Dayton Hamvention Youth Forum in Ohio and continues to promote the hobby to youngsters at local hamfests, club meetings, and other public events.

In the area of public service, Andrea has already completed the ARRL Emergency Communications training course and serves as the network control station for several regularly scheduled on-the-air emergency communications training sessions. These include networks sponsored by the Gwinnett Amateur Radio Society and the Gwinnett County Amateur Radio Emergency Service (ARES). Andrea also was the control station of the GEMA/ ARES Net for activation during the G8 Summit Conference. On the technical side, Andrea has already used the skill she learned through Amateur Radio to build communications gear for the September 2003 World Canoeing and Kayaking event.

Andrea is a member of several prestigious hobby radio organizations including the ARRL and YLRL mentioned above, the FISTS Club (an international organization dedicated to the preservation of the historic Morse Code), the Gwinnett County Amateur Radio Emergency Service, the Gwinnett Amateur Radio Society (GARS), the Alford Memorial Radio Club, the A-1 Operator's Club and scouting Venture Crew 73.

As to her future, Andrea says Amateur Radio and all the opportunities it has given her, also has opened her eyes to some career possibilities.

"I'm possibly thinking about some kind of journalism and writing these (ARRL) columns helps me develop writing skills," she says. "And, I'm also thinking about some type of communication field that I really enjoy, like, for example, serving as net control and learning how to communicate effectively."

At the end of her freshmen high school year, Andrea had all A's, placed 7th in her class of 664,. She takes all "Gifted Level" courses and will be taking "Advanced Placement" next year.

The Amateur Radio Newsline™ Young Ham of the Year Award will be presented to Andrea Hartlage on Saturday, August 16th, 2003 at the Huntsville Hamfest in Huntsville, Alabama. The award ceremony will be co-hosted by Bill Pasternak (WA6ITF) of Amateur Radio Newsline™, and YHOTY Award Committee Chairman Mark Abramowicz (NT3V). Also present at the ceremony will be representatives of corporate underwriters Vertex Standard USA, Inc. and CQ Magazine. The presentation of the award as a regular feature of this prestigious Amateur Radio convention has been made possible through the generosity of the Huntsville Hamfest Planning Committee and its Chairman, Walter "Scotty" Neustadter, (W4WW).

As "Young Ham of the Year," Andrea Hartlage, will receive -- courtesy of Vertex Standard USA -- an expense-paid trip to the Huntsville Hamfest, along with a gift of Yaesu ham radio equipment. CQ magazine will treat Andrea to an expense-paid week in Spacecamp Huntsville, and will present her with a variety of CQ products. Amateur Radio Newsline™ will provide Andrea with a commemorative plaque at the award ceremony. The cost of year's plaque has been underwritten by Dave Bell (W6AQ) - President of DBA Entertainment Inc., Hollywood California.

The corporate underwriters of the "Amateur Radio Newsline™ Young Ham of the Year Award" are world leaders in their respective areas of Amateur Radio product support. Vertex Standard USA, Inc. is a trailblazer in the design, manufacture and distribution of high quality YAESU Amateur Radio and commercial two-way radio equipment. CQ magazine is considered the trend-setting publication serving today's modern radio amateur.

The Amateur Radio Newsline™ Young Ham of the Year award program, (formerly the Westlink Report Young Ham of the Year) now entering its 20th consecutive year, is presented annually to a licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

Past recipients of the Young Ham of the Year Award, all of whom epitomize the heart of dedication to their nation include:

Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986)
David Rosenman, KA9PMK, of Muncie, Indiana (1987)
Jonathan Binstock, NK3D, of Potomac, Maryland (1988)
Erin McGinnis, KAOWTE, of Topeka, Kansas (1989)
Mary Alestra, KB2IGG, of Staten Island, New York (1990)
Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991)
Angela (Angie) Fischer, KBOHXY, of St. Louis, Missouri (1992)
Kevin Boudreaux, N5XMH, of New Orleans, Louisiana (1993)
Allison Zettwoch, KD4CKP, of Louisville, Kentucky (1994)
Adam Weyhaupt, N9MEZ, of Alton, Illinois (1995)
Toby Metz, KB7UIM, of Boise, Idaho (1996)
Brian Mileshosky, N5ZGT, of Albuquerque, New Mexico (1997)
Richard Paczkowski, Jr., KF4BIA, of Edgewater, Florida (1998)
Michelle Swann, KE4EZI, of Warner-Robins, GA (1999)
Christopher Arthur, KT4XA, of Russellville, AL (2000)
Patrick Clark, KC8BFD, of Charleston, WV (2001)
Josh Abramowicz, KB3GWY, of Reading, PA (2002)
Jay Thompson, W6JAY, of Santa Ana, CA., (2003)

The award sponsors wish to also thank CQ magazine, Worldradio magazine, QST magazine, the ARRL Letter, and the Radio Amateur Information Network for their generosity in assisting in soliciting nominations for the 2004 award.

Personally, I think the virus writers are doing our country a great
service. If it were not for the virus writers finding these security holes
in software that our gov and major corporations use, a terrorist could
unleash a whole bunch of viruses all at one time shutting down our country
at a critical moment.

In fact the way I see it, there is so much money being made in anti-spam
and anti-virus software that MS would be a fool to fix the problems.

All you windoze lusers can keep rebooting and reloading your computers at
the same time you spend more money.

Not CA but New England: Boston office (BOX) of NWS had an unplanned failure of all their x-mitters (or the link to them from the programming office?) one morning about a week ago, for a few hours perhaps, and several planned short outages following for maintance. No major problem arose as weather at the time was not severe. Agree though if Wx Tx is down than retransmission of anything following the failure is impossible as there's nothing to re-transmit, though reading of printed bulletins from web or other or repeat of transmissions just prior to the Wx Tx failure would be possible.

> QSOs using a Lafayette (!) HA-460 and 5 elements at 40 feet or so.

Sure, there was plenty of 6M activity then and there's a *lot* more
now.

There's a bit of context confusion here. I sed "neighborhood comms",
as in club networks, "channels", etc. I should have used different
words.

In the early-mid '60s, in general, the clubs around here moved their
nets from 6M AM to 2M AM or FM. The Mobile Sixers, Philmont, FRC, etc.
The Frankford club 6M AM freq which went back to 5M days petered out
in the 1957-1960 timeframe and died from lack of interest. Some loosly
organized non-member dxers based in the Upper Darby area like myself
started using AM on 147.888 for spots about 1960. Individual FRCers
started to show up on the freq which expanded it's coverage area from
just "da neighborhood" to the Quakertown area thru mid-Delaware to the
Jersey shore. HF big guns with big towers and antennas. Over the next
few years the FRC absorbed most of us and our freq and moved to
147.870 FM simplex. Which, incidentally, resulted in early "repeater
war" skirmishes with some Long Islanders who did not appreciateus
booming their repeater input.

It was then that some mobiles started showing up on the freq. Two
meter mobile antennas are a lot easier to deal with than are 6M mobile
antennas. The 147.870 freq became the input to the 147.87/147.27 pair
for the FRC machine about 1966-67 which is still active. K3JLI/K3NL
was the sparkpug behind most of it. Other clubs went down similar
paths in the same timeframes.

> A *lot* of hams I knew made the jump from 6 M AM direct to 2 M FM soon after,
> though.

That's basically what I meant.

<>

> The number of new JA hams has dropped like a stone; the number of station
> licenses is way down and JARL is now smaller than ARRL. They're imploding - and code tests are not the reason.

That's all well and good but where's the cause and effect connection?
Is ham radio "dying" in JA because they have a free pass license
class? I doubt it. There are other forces at work in JA. Besides we're
talking U.S. ham policy and we ain't JAs. With some caveats I'd go for
a similar class here and I think it would work.

>
>And what an incredible hobby it is! Nothing wrong with that.

Quite true...but some lifestylers can't abide by such "negative"
terms and MUST build up their hobby - or "avocation" - to
something MUCH MORE than what it is. :-)

Well, I've been told (in no uncertain terms) that I CANNOT be
"interested in radio" without getting a ham ticket. That despite
having changed (radically) my major many years ago from
commercial illustration to electronic engineering...and then
working and retiring from radio-electronics industry! :-)

Not only that, but to be a "radio operator," one MUST know
morse code...despite having actually operated radios long
before and after. :-)

Perhaps the most ridiculous statement is that one who doesn't
know morse code can't possibly criticize its retention as a test
element because "they don't know what it's about!" That makes as
much sense as demanding that EVERY spacecraft designer be a
spaceflight-qualified design person or that EVERY aircraft designer
MUST be a qualified aircraft pilot. :-) Obviously they aren't, yet
the aerospace world keeps on advancing, pushing all kinds of
performance envelopes, setting new records, etc.

Every other radio service in the USA but amateur radio has either
given up on morse code mode for communications or never

considered it in the first place when that radio service was conceived. That apparently grinds the teeth of the PCTA so much that they are mad as hell and can't take it anymore...and can't think much anymore either. Morse code is passe' as a communications mode and that's the big reason all the other radio services stopped or never started morse.

Those that "qualified" by a high-rate morse test can't abide anyone becoming a "qualified" amateur without that high-rate morse test. Unthinkable! All must do exactly as they did or be "dumbed down." Ptui. Lifestylers making themselves the "role model" for all to emulate, to be "as good as they!" :-)

An unlicensed person cannot gain "practical experience" without
breaking the law! :-)

> So you can have a newly minted Extra class Ham with NO other
>electronic experience.

They could also be six years old...or younger! :-)

In both cases, the law is written that way.

To get the law changed, petition the FCC of U.S. licensees.

> Now is the testing process' fault? Emphatically, NO. The deficiency is
>in the lack of mentoring. The Elmer is not as prevalent as he/she once
>was.

Was it EVER prevalent? Or was it just a "good thing to be" as stated
in the hamateur publications...and so therefore, all the hams who
loved to tell fish stories said "they were elmers all along?"

>The amount of knowledge to be knowledgeable is way beyond any three
>test regimen. I know in my case, I have learned so much more through my

>in three tests.

Radio hasn't stopped changing/advancing since it began 108 years
ago. It's not possible to know everything there is about radio. The

rest of the radio world isn't modeled on amateur radio.

Amateur radio activity as a MINDSET (more likely the case) is a
highly subjective thing. "Lifestylism" is one way to go about it;
be like all the others, speak the jargon, tell the stories, etc.

> That is why I like the idea of "time in grade" before advancement. This

>way, the advancing amateur has the chance to absorb some knowledge.

Amateur radio was NEVER a profession, a guild, a union, or a craft
that serves the public as a whole with some kind of "service." It has
always been largely a HOBBY as pointed out by Leo. It is recognized
as such by the major amateur radio membership organizations.

"Time in grade" is a military term. Militaries are directly engaged in
a service to their countries. It is a very HARSH sort of service, that
being the distinct possibility that military members might lose their
life in such service. Amateur radio is NOT that kind of service.

There should be nothing at all wrong with a HOBBY. Especially
one which can, but seldom does, lead to some sort of technological
advancement. It makes its avocationists think and do, exercising
the mind. The sum total of that may be of value in other radio
related fields.

>> Another example "I want a 150 watt amp on the output of my 75 watt two
>> meter rig. The amp I am looking at wants 50 watts in." Obviously, it
>> might be a great deal easier, not to mention cheaper, to get a better
>> antenna than a 1/4 vertical. It would help reception too, but that is
>> often not considered. As long as "I can talk a long way".
>
>Another lack of experience issue.

So...instead of pointing out the lack of information to that individual and
guiding them towards increasing their range, you want to make them
an object of ridicule? That isn't what amateur radio is about...or is it?

> Me too. And if you look at most of those questions, they show
>inexperience. That's why I keep coming back to the "time in grade"
>thing. I know a couple extras that had no HF experience until after
>getting their Extra license! They had to be taught the structure of a
>QSO. And were frankly embarrassed about it.

So...just WHO mandates this very proper protocol or a a QSO?

Will you lose your "amateur job" if you don't do it just right?

Should you mandate that all those without experience be stripped
of their license for not using the proper QSO protocol with all the
very perfect jargon and phrases (such as "you are '599' etc.)?

> Sometimes it IS hard to resist rolling your eyes! 8^)

Tsk. Nobody but nobody can be as "good" as the experienced
extra? You are superior in radio because of that?

> My overall view is that we have to step back and take a long look at
>exactly how much we do know about the Amateur radio/RF subject. Then try
>to figure out how to put that in a testing regimen.

Or testing curricula. :-)

The first place to start is the VEC Question Pool Committee. They
are all licensed radio amateurs.

Ask yourself, "will they 'roll their eyes' if you ask for changes?"

Do you think they will demand you spend time as a VEC QPC
member FIRST before criticizing anything they do? According to
some in here, one can't possibly "know something" without first
DOING it and anyone who hasn't done it can't possibly know what
it is about, can they? :-)

Or would you rather just make fun of the VEC QPC on the side
without taking any positive action?

>To me, it is pretty
>certain that there is so much material to learn and go over that it is
>pretty near impossible to put into 3 tests without making the tests so
>grueling that it is a near certainty that anyone would pass it, plus no
>one would want to administer it. That is why I think the time in grade
>would go a long way towards making for more knowledgeable Hams. Perfect
>system? Not hardly, but it should help.

Amateur radio isn't a profession, guild, union or craft that requires
such "time in grade" for a HOBBY.

However the "classless" society the USA is supposed to be, there
seems to be MUCH ado about titles, qualifications, certificates, etc.
Rank-status-privilege is always tied up with amateur radio licensing,
isn't it? Why? What purpose does it serve except to use it as
"being better than others" if you have it?

Latin phrase "primus inter pares" is an oxymoronic little thing that
literally translates to "first among equals." Seems to me that way
too many radio amateurs want to be "first" without any real thought
about being "equal."

>It's the regulators who we are dealing with on this issue, and they
>know precisely what Amateur Radio is!

"Amateur radio is a SERVICE!" in the USA. I've been told that
in no uncertain terms. By an Extra! By several Extas, actually.

Every single group of every activity thinks their activity is the
BEST, the MOST IMPORTANT one of all involved. QED forever.
Logically, that can't be true, but that just enrages the group
more and they can get rather silly about their importance in the
scheme of things.

>>Or how about antenna restrictions? Try telling a planning commission, HOA,
>or
>>zoning board that they should allow a variance for your "hobby".

First ya gotta define what you mean!

As it is right now, a new ham need only wait until his/her info shows up on the FCC database. An upgrade is good instantly (as long as the holder signs /AG or /AE, as the case may be) and the "temporary" identifier goes away when the info shows up on the database.

A far cry and big improvement on the bad old days when you passed the test then pestered the mailman for 6-8 weeks waiting for the new license to show up in the mail. You *could not* use your new privs until the actual license was in your possession.

Gee Len according to what I just read on your link is that the IEEE is in
the process of setting standards for the deployment of BPL. Sure sounds
like they support the idea to me.

But I'm not an engineer. Is language somehow different for us common folk?

That wording is used by IC as well. As is the Family Radio Service
the General Mobile Radio Service, the General Radio Service (CB), etc.

My interpretation of their reference to a 'service' is that it is a
service provided by the regulatory authority to those who wish to use
it. Not a 'service' that the users provide to others - or enlist in
... :)

How far back are you talking here? Ever since I was licensed (1992) and some period before, you could go on the air with the upgraded privileges as soon as you passed the test so long as you already had a license and used the appropriate identifier. You did have to have that first license physically in hand though. At the time I licensed, the FCC was backlogged and it took closer to 12 weeks for the license to show up. Boy was that a long wait.

Makes sense - precursor to packet spotting and such.

But why the move from 6 to 2 back in AM days? You guys weren't running converted landmobile highband FM stuff for it...

>It was then that some mobiles started showing up on the freq. Two
>meter mobile antennas are a lot easier to deal with than are 6M mobile
>antennas. The 147.870 freq became the input to the 147.87/147.27 pair
>for the FRC machine about 1966-67 which is still active. K3JLI/K3NL
>was the sparkpug behind most of it. Other clubs went down similar
>paths in the same timeframes.

Makes sense but mobiles weren't the reason you folks went to 2 meters in the first place.

Remember the Saturn 6 halo? Watta monster! A nice 5/8 sure beats all that hardware...

Agree fully. Modern technology has provided superior methods of
reliable communication. Morse had it's day - so did the piston-engine
fighter aircraft, the manual accounting ledger and the slide rule -
but they're gone now too - as it should be. And must be.

>

Ahh y'all must not have heard about the goings-on at Hamcom. Hamcom and W5YI-VEC arranged for internet access, wherupon the people passing their test recieved their new licenses within two hours of passing the test.

And while its true that upgrades can use their new licenses immediately, the Technician has to wait for their license the old fashioned way.

This changes all that.

As my son would say, sweeeeeet!

Well, considering that the other definitions of "hobby" include 'a
small falcon' and 'a child's toy - an imitation horse', it fits the
primary definition of hobby pretty well! - precisely so, in fact :)

>>
>>>>Some choose to apply the skills that

>>governments are wont to do!) on their websires and in their literature
>>- the above quote from the FCC illustrates this. Means the same
>>thing, though!
>>
>Does Industry Canada use the word 'hobby'? Just curious...

Um, no, I think that they use standard Governmental language, just
like the FCC, being that they are a government department and stuff.

Their definition of Amateur Radio is virtually identical to that of
the FCC (to the point of plagiarism, almost,!) - an activity pursued
for personal interest, wothout monetary compensation. In short, a
hobby. Not the falcon, the activity..... :)

>
>>>Here's another angle:
>
>>>Right now our biggest threat is BPL. Would you recommend that we describe
>>>Amateur Radio as a hobby in our attempts to combat the BPL problem? If we

Don't know, or don't care? Big difference......ignorance or apathy?

>
>And you avoid the question: If we call *ourselves* hobbyists, how do we reply
>to their questions listed above?

Well, we sure don't do that by playing semantic games with them, Jim!

>>
>>BTW, do you believe that any sort of case we could make would sway the
>>BPL folks to abandon their business plans and walk away from it? "Oh,
>>we're sorry, we thought that you guys were just hobbyists....now that
>>we understand that this is your avocation, we'll shut down our network
>>right away. Sorry we bothered you!" Hmmmm.
>
>We don't have to give them ammunition to attack us.

Playing silly semantic games could well be all the ammo that they
need......these are intelligent business people that are involved in
this game, Jim - not a bunch of rubes.....

>
>Emphasizing that we are *licensed radio operators* makes a stronger case than
>*hobbyists*, I think.

That's a far better way of approaching the situation. In fact, it's
the only compelling one that we have.

>>
>>It's the regulators who we are dealing with on this issue, and they
>>know precisely what Amateur Radio is!
>
>Then why aren't they setting much lower noise levels for BPL? This isn't just a
>US problem - there's a BPL trial going on in Canada.

True - and we're equally concerned about the impact on our hobby as
our counterparts in the US.

Regarding your question on noise levels - that one would best be
referred back to the FCC, as it's their call. Which, for all intents
and purposes, appears to have been made already......

>
>>>Or how about antenna restrictions? Try telling a planning commission, HOA,

>>>or zoning board that they should allow a variance for your "hobby".
>>

>Not about folling anyone. It's about how we present ourselves.

Or misrepresent ourselves....in any event, they could care less. If
you buy a home with existing CCRs, you get exactly what you paid for.
Period. That's how contracts work!

Which is why I didn't.. :)

>>
>>>"Avocation" is much better word, I think.
>>
>>Actually, it means exactly the same thing:
>>
>>http://thesaurus.reference.com/search?q=avocation
>>
>>Entry: avocation
>>Function: noun
>>Definition: hobby
>>
>>A rose by any other name......
>>
>Words have power beyond their dictionary definitions. Otherwise we wouldn't
>have so many.

Many are synonyms - some seem to have been designed for the purpose of
confounding the illiterati! But, in the end, whether you call it an
amusement, art, avocation, bag, craft, craze, distraction, diversion,
divertisement, fad, fancy, favorite occupation, fun, game, interest,
kick, leisure activity, leisure pursuit, obsession, occupation, pet
topic, play, quest, relaxation, schtick, shot, sideline, specialty,
sport, thin, vagary, weakness, whim, or whimsy - it's still a hobby!

And one that I am proud to be a part of!

All the goofy names for Amateurs I made above are more for shock value
than seriousness.

Once we are involved in political matters, we will find our status as
so-called "amateurs" called into question. And it doesn't matter *what*
we are called or *want* to be called. We might be glad they can fixate
on our so-called amateurish status. Other digs might be worse.

Proud to be an amateur, Proud to be a Ham.

>How far back are you talking here?

It seems like only yesterday, but in fact it's quite a number of years. After
all, I got my Novice 37 years ago this fall!

>Ever since I was licensed (1992) and
>some period before, you could go on the air with the upgraded privileges as
>soon as you passed the test so long as you already had a license and used
>the appropriate identifier.

That came about in the early 1980s IIRC. It was about the same time as CSCEs.

>You did have to have that first license
>physically in hand though. At the time I licensed, the FCC was backlogged
>and it took closer to 12 weeks for the license to show up. Boy was that a
>long wait.

Yep!

How about this (the old way to a Novice):

First, you found a volunteer examiner to give you the test. You made an
appointment to meet for the code test - in my case it was at the volunteer
examiner's house on a summer night.

S/he tested you on code - sending and receiving, and filled out a form
attesting to same. This form was sent to FCC to request the written test.

You then waited 6-8 weeks for FCC.

Once the written test packet arrived, you made another appointment with the
volunteer examiner and s/he proctored the written test. It came and left in
sealed envelopes.

You then waited another 6-8 weeks for FCC. While some volunteer examiners would
look over your exam and let you know if you passed or failed, mine didn't. And

it didn't really matter because only the FCC's marking mattered.

If you passed, you got a thin little envelope in the mail, with your license inside. Typically it was 12-16 weeks or more from when you first contacted the volunteer examiner.

If you failed, you got a thicker envelope with instructions on how to retest. You had to do the whole mess all over again - no credit for the code test you passed all those weeks before, and the new cycle would take another 12-16 weeks.

In my case, it only took one test cycle, but the whole summer of 1967 came and went to get through it. Took the code test in June but didn't have the license until October.

Well, I can only go on what I think happened. Phe practical side of Ham radio, operations wise, was slowed down by the Morse requirements. It took a fair amount of time before most people could advance (sort of an artificial Time in Grade) due to the time spent increasing your Morse code speed.

Note my view may be colored by my difficulties in learning Morse code! I would certainly still be a General if the old rules were in effect. Or maybe still a Novice.... or maybe not a Ham at all, since my year would be up. All depends on when I would have taken the tests I guess.

But my thoughts on the matter are not even close to a military thing.
It's just a way to gain some experience before moving ahead.

>>>Another example "I want a 150 watt amp on the output of my 75 watt two

I'd hope you wouldn't get that idea. We are all capable of asking the
proverbial dumb question when we start out. How that question is
answered by the more experienced has a lot to do with what the newbie
gets from the hobby, even their future in it. A new person that gets a
smart a***d anser to a question that only sshows that they need to learn
som more often just gets embarrased and sometimes just quits.

Hardly a way to grow the hobby!

>
>
>> Me too. And if you look at most of those questions, they show

>>QSO. And were frankly embarrassed about it.
>
>
> So...just WHO mandates this very proper protocol or a a QSO?

A lot of new hams are concerned about talking on the air because they
aren't sure what to say! For whatever reason, it is a big help when they
know what likely structure there would be to the communication. Its just
a thing like call other callsign (or answer call) Information exchange,
if desired, and there ya go. Don't forget to identify every so often,
and sign off when done. Pretty simple stuff. But plenty don't know early on.

> Will you lose your "amateur job" if you don't do it just right?

Yeah - they'll quit paying me! 8^)

> Should you mandate that all those without experience be stripped
> of their license for not using the proper QSO protocol with all the

> very perfect jargon and phrases (such as "you are '599' etc.)?

Frankly, I don't care for Q sign language. I'll use it when contesting,
but otherwise avoid it. And I hate UR RST 599, especially when they tell
me that I'm barely above the noise. Verbal filler.

>
>> Sometimes it IS hard to resist rolling your eyes! 8^)
>
>
> Tsk. Nobody but nobody can be as "good" as the experienced
> extra? You are superior in radio because of that?

Nope. Its just that you know what is likely to happen next. Often after
correcting or explaining the newbi's mistake, they are going to be
embarrassed, and sometimes the reaction is not good, to say the least.
I'm sure you have had the experience of pointing out someone's mistake,
and through embarrassment or something, they become agitated or angry?
Probably related to people mot wanting to be wrong I guess.

Six to eight weeks you say? Tsk, tsk.

Back in 1956 I got my First 'Phone in 2 1/2 weeks after the Chicago FCC field office test. By surface mail.

First indication I got of formal passing was a job offer from Walter Reed Hospital looking for closed-circuit color TV techs. Not my cuppa. Got that ad in 1 1/2 weeks. By surface mail.

I got my first civilian transmitter job with WBEL, Beloit, in six weeks. AT&T turned me down for a telephone company microwave job...uncorrected vision too great although corrected vision was normal...they were most fussy on certain physical standards. :-)

Heh, some of the Big professional amateurs read the standard
boilerplate political phrasing and take it literally. "Service!"
"Emergency communications!" "Pool of trained etcs." Et cetera.

Those self-proclaimed "important" folks NEED all the political
boosting they can get. Makes their lives "important" I guess.

Watch for the outrage and anger from the gunnery nurse on that...

From an FCC person long ago I got the definition of "service" used
by the USA civil radio commission. "'Service' is a regulatory term
denoting a type and kind of radio activity being regulated (in a Part)
in Title 47 Code of Federal Regulations.

Part 95 of Title 47 C.F.R. covers Personal Radio Services such as
CB, R/C, and FRS, for example.

>> Every single group of every activity thinks their activity is the

I think that "access cover" in place of "manhole" is more apt.
That includes most of the sanitation workers being male...

"Sanitation engineers" do exist but they don't normally do the
rounds collecting trash. Those job specialties are involved in the
old-time waste water reclamation, as another example. Those have
been doing that for over a half century, well before "recycling"
became a buzzword.

>and it still makes me chuckle every time I think of it!
>
>Bravo!

Thank you! And, it's all free stuff in here. :-)

I guess I did write "Four Morsemen of the Apocalypse?" :-)

Don't remember it for sure. True. Some things are just "throwaway
lines" like in interviews and news shows. Those are "important"
only in cases where someone with an obsessive need to "get" me
have to try and bend it way out of proportion. Or, they do the milk of
amnesia thing and somehow can't remember snit. :-)

Well, I don't have the "interest" to study for the PhD in amateurism.
As part of other things, I have to study for my blood test...

Beep, beep.

Yes, it was. :-)

All that "working in the big leagues" of radio and electronics.
Making money. Working at the cutting edge. Pushing the
performance envelope beyond the ordinary state of the art.

Tough stuff. Not everyone can cut it. Some don't have the
cojones for that sort of thing. :-) :-) :-) :-)

>Not to mention the technical articles that you wrote for Ham Radio
>Magazine.....yup, no interest evident there either :)

Well, to hear one of the obsessive, the proud, the sick tell it in
here, those articles were ALL "cribbed from other work!" Gotta
love it...some yahoos can't understand the simple explanations
so they defame the authors just so's nobody can recognize their
ignorance. Oh, well. Life in the newsgroups... :-)

>> morse code...despite having actually operated radios long
>> before and after. :-)
>
>Well, to be a telegrapher, that would be true - but certainly not to
>communicate using the medium of radio.

Actually, the word "telegraphy" is also applied to teleprinters,
such as Teletype Corporation's "Teletype" machines. Those
take some "expertise" to run, maybe a whole half-day "course"
on-the-job to get to know quite well. :-)

Manual telegraphy (morse code and its derivatives) CAN be used
on radio...except only amateurs use it nowadays. Some take
(ostensibly) great delight in using that skill...and then go overboard,
off the edge, and into fantasyland on extoling its virtues and whatnot
long after the first standard teleprinters could sustain 60 WPM
throughput on noisy radio channels.

Claude Elwood Shannon's seminal paper on the relationship of
information rate, bandwidth, and noise (1958, Bell System
Technical Journal) used a teleprinter as the example mode of
communication. Manual telegraphy was not the example, only
teleprinter telegraphy.

>
>Absolutely!

Well the Cardinal rule in THIS venue seems to be stuck on "if you
want to get rid of the code test, they you HAVE to take one FIRST!"

[was that Cardinal rule established in some kind of encyclical?]

All that and one MUST take the same test that the olde-tymers did
in order to show "committment and dedication to all other
amateurs!" As if all those other amateurs ever "sign off" on a
license... :-)

>> Every other radio service in the USA but amateur radio has either

>fighter aircraft, the manual accounting ledger and the slide rule -
>but they're gone now too - as it should be. And must be.

Heh. I began working for a living back when there were NO pocket
calculators. Only the slide rule for quick, three-place accuracy
calculations...or the five- and six-place logarithm and transcendental
function tables and an electromechanical four-function "adding
machine" (which could do subtraction, multiplication and division).

For $60 off the shelf, my HP 32 S II not only does TEN-place
accuracy calculation, has all the transcendental/log functions built-
in, can do complex number arithmetic (and some complex trans-
cendentals) but it can also be programmed for small tasks. It's
been running for about four years now on the same battery (lithium)
and may need replacement in the near future. My K&E Duplex
Decitrig slide rule is storage. Slide rules were never any "smarts"
for anyone, just quick-arithmetic things. But, those have become
(somehow) symbolic to show something or other. Ptui.

>> Those that "qualified" by a high-rate morse test can't abide anyone
>> becoming a "qualified" amateur without that high-rate morse test.
>> Unthinkable! All must do exactly as they did or be "dumbed down."

>> emulate, to be "as good as they!" :-)
>
>The more I read here, the less I want to be 'as good as' some of the
>gentle readers of the group........ nor do you, I'll bet! :)

True. I've already "been there" insofar as HF communications is
concerned, long ago. Lots of the inhabitants of this animal farm
resent the hell out of that. TS to them. I didn't have any choice in
that matter but found the situation interesting and challenging, and
met the challenges. The situation (military service at the 3rd
largest U.S. Army radio transmitter site) was interesting enough to
cause me to make a major change in my career destination. That

doesn't seem "enough" for certain PCTA in here. :-)

Well, back to the books. Something is holding down my invention
of the antigravity device...and I have to study for my blood test.

Dieter...

I said Bill provides a reliable and reputable SERVICE, from which YOU make an assertion that HE is unreliable and disreputable.

His organization's finances, as far as I can tell, are not any of your business. I may be wrong, since I have no idea what his formal charter, IRS status or license to do business is, however I know this...You've been making all sorts of allegations against Bill Pasternak for at least 2 years now, and other than whining about how much money he allegedly pays to run his service as opposed to what you think he keeps for himself, you haven't produced ONE verifyable RECORD of ANY wrongdoing or misdeed on his part. Not one.

I accept (although I don't agree with) your difference of opinon with him over whatever this inane repeater turf war was all about, but so far that "difference of opinion" is ALL that you've produced.

If you want to impress anyone with the validity of your claims, suck-it-up and file the official complaints with the California AG, the IRS, the FCC, the ASPCA, or the International Brotherhood of Who Gives a Dang. This is an UNMODERATED Amateur Radio newsgroup, and as much as you may disagree with it, the overall content of ARN's releases ARE related to the intent of it. Your PERSONAL angst with Bill is NOT!

If you'll go back and read YOUR original posts, YOUR argument was
AUTOMATIC retransmissions, Dieter.

I am saying that your argument of AUTOMATIC retransmission, plus the FCC's
caveat of not allowing the transmissions for use by anyone other than licensed
Amateurs cannot be met under current FCC regulations.

It will still take a control operator to decide if any particular
transmission is relevant, important enough to life and property to retransmit,
and generally meets with reasonable scrutiny of FCC rules and regulations.

Agreed!

You can also have a newly minted ham of any license class with no
amateur experience, who thinks that amateur radio *should be* a
certain way...
>
> Now is the testing process' fault? Emphatically, NO.

I disagree!

Part of the problem is a testing process that permits newcomers to
"study the test' rather than actually learn what amateur radio is all
about. Of course that's not the only problem.

> The deficiency is
> in the lack of mentoring. The Elmer is not as prevalent as he/she once
> was.

I don't know if that's really true.

Most of what I learned as a beginner came from books and listening to
hams on the air, not formal Elmering. Building receivers and then
transmitters was also a learning process. The ARRL books of the time
were excellent, but I didn't limit myself to them. Nothing in the
local libraries that dealt with radio was safe from me....

This doesn't mean everyone has to do it that way, only that it can be
done.

> The amount of knowledge to be knowledgeable is way beyond any three
> test regimen.

Agreed!

> I know in my case, I have learned so much more through my
> interactions with more experienced hams than I could have ever hoped to
> in three tests.

I learned more from actually building and using simple and then
not-so-simple equipment.

btw, that's a major reason for the importance of Morse Code to amateur
radio. Simple equipment can be built and used with that mode with very
good results, serving as a learning tool. How many hams would build an
SSB transceiver as a first project?

Some will scoff at this, saying a 'phone transmitter isn't that much
more complicated. Just ask them when they last built one, though....

>
> That is why I like the idea of "time in grade" before advancement. This
> way, the advancing amateur has the chance to absorb some knowledge.

One thing I notice that is very different today is the "license first"
emphasis. When I got started, it was very common for a prospective ham
to have a shortwave receiving setup before getting a license. Most new
hams had spent many hours listening to other hams before being
licensed, and had picked up operating practices, basic propagation,
and receiver operating skills before going on the air. A lot of us -
myself included - learned the code by listening to other hams use it
on the air. So when the license was in hand, we were ready to go.
(When I passed the written test, I began construction of a
transmitter, and by the time the license arrived it was complete and
ready to go on the air).

Why should they be embarrassed?

One problem with the current license setup is that it tends to steer
beginners to VHF/UHF and away from HF. First impressions are
important, and some folks have a hard time because their expectations
are so different from reality.

Maybe. But I am still mystified as to why someone who is interested
doesn't just listen first and observe how things are done?
>
> But it is up to those of us that have more experience to be kind about
> it.

Yep.

But that's a two-way street. Some (not many) newcomers develop an
"addytood" where they disparage almost everything hams do. How much
help should I give someone who only wants to argue?

> And I consider myself to be one of the lesser experienced Hams. I
> have 30+ years of electronics experience, but except for one early job,
> I've mostly been a computer jockey. So I'm now learning a lot about RF.

Electrical engineering - heck, just the electronics part - is such a
broad field that someone can be expert in one area and quite ignorant
in another.

Well, back in the bad old days before restructuring we had five written tests: Novice, Technician, General, Advanced, and Extra. Plus three code test levels, although you could avoid two of the code tests with a medical waiver. Then we were told such a system was too complicated...

Interesting.

That would be a bummer. I had heard of such but didn't know how long ago it might have been. At least the system today has much more reasonable processing times.

Dee, in ham years - a decade is a very short span of time. A dozen
years go by in the blink of an eye.

Ever since I was licensed (1992) and
> some period before, you could go on the air with the upgraded privileges as
> soon as you passed the test so long as you already had a license and used

They're probably hit by the same budget crunch that the rest of the
government is. And I think amateur radio is low on the food chain.

> Any intelligent person doesn't consider it a filter.

Right. Worked. Quite well in it's day. But there was no "Woo-woo,
let's do some vhf ham radio!" aspect involved at all, we coulda cared
less. Push the button, talk. And that's all it was, a utility intercom
which in a sense barely qualified as ham radio. A precursor to both 2M
packet spots and instant messaging.

The precursor to the 2M net was a pyramid telephone phone list. We had
paper lists of who needed what countries and their phone numbers. A
new one showing up triggered a flood of dialing activity. In one
instance I got something like four phone calls in rapid succession
when some goodie I needed showed up. I dove for the radios at the
first call and fired up but the phone calls kept rolling in. Come the
fourth of fifth call I hollered "Dammit, lemmee alone so I can WORK
the guy willya?? It was my mother-in-law. Oops.

> But why the move from 6 to 2 back in AM days? You guys weren't running
> converted landmobile highband FM stuff for it...

I'm sorta disinclined to soak up bandwidth for this local minutia. But
since you asked . . There was no organizational relationship between
the FRC giving up it's 6M AM net and the inception of our 2M AM net.

The FRC had a 6M AM spots freq fell into disuse in the '50s. Later a
bunch of DXers who used the ham radio dept. at Kass Electronics on
Twp. Line Rd. as a hangout called themselves "The 200 Club", 200
already confirmed and working on 300, couple dozen guys were the
regulars. Some members of the group were FRCers, most were not. I have
no idea who started it but by the time I got involved with this bunch
they were already on the 2M AM freq. There was no "the move" or "you
guys", the demise of the FRC 6M net and the rise of the "200 Club" 2M
net happened in different timeframes and involved two different
groups. Mobile operations didn't get into the mix until the FRC
repeater came along many years later.

The group used all sorts of 2M gear. Mostly off-the-shelf 2M AM
xcvrs, SCR-522s, whatever worked, I used a Benton Harbor Lunchbox.
Whatta crapper THAT was!

> >It was then that some mobiles started showing up on the freq. Two

Right. That's the big difference between us and all the clubs who are
based on their repeaters.

You've already stated that the lack of a code test in JA is not the
reason they have problems. i.e., code tests either way are not
involved so the "we need to dump the code test to promote growth"
proponents arguement is moot. As is the hardcore PCTA arguement.

> >Is ham radio "dying" in JA because they have a free pass license
> >class? I doubt it. There are other forces at work in JA.
>

Beats me, but ham radio is holding it's own in this country so
something dramatically different is underway in JA.

After all, Steve, the second "T" in "AT&T" stands for "Telegraph".
Leonard likely let the folks in on his views. WBEL was using modern
amplitude modulation.

The use of VHF in the Cincinnati/Dayton areas followed a similar pattern.
When I left the area in the early '80s, a couple of FM simplex frequencies were in use. One of them was used by the Ohio Valley Amateur Radio Association gang. Another was used by the Southwest Ohio DX Association.
A third, less heavily used frequency was used by W8JIN, W8SUJ and myself for chasing stuff on 160m. It is interesting that a very active telephone callup list was maintained by SWODXA until 1982 or so.

None of the 2m ops were enthralled by VHF operation. It was simply a means to an end.

There's none of that around here. Those of us who are not valley dwellers use the Pittsburgh DX cluster. When OH7XM accompanied us on a trip here in '97, he told K8IP during a luncheon that he'd like to meet some of the other area DXers. Ike's response was, "Well, when Dave is overseas, WB8ZTV and myself are pretty much it". 'ZTV moved to Florida but N8NN returned to the area after an Army career so the numbers are the same.

The article at http://tinyurl.com/4s6qg calls into serious question the manner in which the FCC allocates spectrum space, and even suggests that the FCC is itself in violation of the Communications Act. It seems that the Washington Times thinks that special interests are at work at the FCC and that Congress needs to step in.

Can anyone say "BPL?"

To be precise, they were (and probably still are) using
double-sideband-with-carrier amplitude modulation. A version of that mode was
first used in radio by Reginald A. Fessenden in the year 1900.

Yep - it was! The actual processing by FCC wasn't the problem - it was waiting
for your application to reach the top of their pile.

>I had heard of such but didn't know how long ago it
>might have been.

The big changes occurred about 1982 when FCC turned testing over to the VECs.
The addition of online renewals and such is even better.

>At least the system today has much more reasonable
>processing times.

Usually. Right around April 2000 things really bogged down! But that was a
one-time event, not the rule.

>Stay away from this person - he's much less stable that a quick ride
>up the moist adiabat (wx term). Good luck. bb

The person(s) to stay away from are the pathological liars known as
Leonard H. Anderson and Brian P. Burke. (Where did you get "Billy" out of that,
Brain...?!?!?)

Dieter has not called ME any names, ergo he shall not be called names.
You should have stayed away from Lennie's lead, Brain, and same would not have
befallen you. In those few moments of lucidity when you've relented from the
assinine behaviour, I have followed suit. You fall back into it, then you get
it right back. Too bad you can't seem to learn from YOUR mistakes. I guess
you like pain and humiliation.

And you're welcome to present "evidence" to the contrary, however you're
still way behind on evidence of your OTHER assertions, so I guess we'll just
have to wait for this, too.

As usual.

The Technician was always 5 wpm code. Code waivers have existed since 1990.

>But my thoughts on the matter are not even close to a military thing.
>It's just a way to gain some experience before moving ahead.

That was always the purpose of the 1-year-for-Class-A and 2-years-for-Extra
requirements. Note that time spent as a Novice or Technician did not count!

While some may insist on describing amateur radio as a "hobby", that definition
does not mean there should be no standards, no entry requirements, etc.

>We are all capable of asking the
>proverbial dumb question when we start out.

And long after!

>How that question is
>answered by the more experienced has a lot to do with what the newbie
>gets from the hobby, even their future in it. A new person that gets a
>smart a***d anser to a question that only sshows that they need to learn
>som more often just gets embarrased and sometimes just quits.

Sure - but there's another angle.

If a licensed ham is asking questions that show serious ignorance of basic
radio concepts, something is quite wrong with the testing/learning process.

>A lot of new hams are concerned about talking on the air because they
>aren't sure what to say! For whatever reason, it is a big help when they
>know what likely structure there would be to the communication. Its just
>a thing like call other callsign (or answer call) Information exchange,
>if desired, and there ya go. Don't forget to identify every so often,

>and sign off when done. Pretty simple stuff. But plenty don't know early on.

Agreed. And there are accepted amateur standards of how it should be done.

For example:

"KB3EIA, this is N2EY, go ahead"

"KB3EIA from N2EY, over"

(on phone)

"KB3EIA DE N2EY K"

(on CW or data modes)

are all correct, acceptable amateur radio practice. But

"N2EY to KB3EIA"

or

"N2EY calling KB3EIA"

is *not* correct amateur radio practice - and for good reason.

The question I have is - why not just listen for a while and see how hams do it?

>Frankly, I don't care for Q sign language. I'll use it when contesting,
>but otherwise avoid it. And I hate UR RST 599, especially when they tell
>me that I'm barely above the noise. Verbal filler.

I avoid the use of Q signals on voice - there's no reason to use most of them. But on CW they are standard practice - that's what they were designed for.

"599" is a CW RST report. "Five by nine" is the equivalent voice report. And I'm notorious for report accuracy...

>Nope. Its just that you know what is likely to happen next. Often after
>correcting or explaining the newbi's mistake, they are going to be
>embarrassed, and sometimes the reaction is not good, to say the least.

Some people just can't stand being told they're in error...

>I'm sure you have had the experience of pointing out someone's mistake,
>and through embarrassment or something, they become agitated or angry?

Oh yes. Some get quite aggressive.

>Probably related to people mot wanting to be wrong I guess.

Perhaps. Or maybe they resent being told they are wrong by someone they consider inferior....

They didn't specifically say, but it must have been a direct
connection. The article was in the August CQ on page 6. To get a license
in the database on a weekend, must have taken a good deal of automation

>

5 by 9 seems like s multiplication problem..

Or 5 of 9 I've heard pretty often. I guess those hams have been
watching Star Trek Voyager. And of course lets not forget a verbal HI
HI. FOr crying out loud, if its funny, Laugh! I cringe when a person
says that to me. Of course on CW it's different.

Just how they are put together, I guess. Some people just get very
angry when they are wrong about something. I used to work with a fellow,
and occasionally we'd get into friendly discussions about whatever.
Anytime I won an argument convincingly, he would explode! He'd come back
a few minutes later and apologize, but it was a weird thing.

Yep, there they was sending CW on microwaves. Always got through,
too!

Hi, hi!

> Leonard likely let the folks in on his views.

I'm sure the AT&T leadership let themselves in on their own views and
abandoned the "telegraph" part of the biddness. Hmmmm? I wonder.

> WBEL was using modern amplitude modulation.

Please, not another advocate of using CW on the AM broadcast band. I
guess we'll all be installing bfo's in our car stereos as soon as
Heils views become mainstreamed.

Hi, hi!

I'm sure that the Telegraph part of AT&T really means teleprinter.
That should comfort the Heil.

Well sure! you can't know to get rid of it if you aren't proficient
in it. Just like the CEO of AT&T was proficient of manual telegraphy
to have gotten rid of manual telegraphy.

Hello, Chris

What is so surprising that the FCC should follow king Bush ... er, President Bush's lead? If Congress steps in (and remember that we have the best government money can buy), they simply have to re-write some legislation so the FCC can continue to help Congress' well-heeled friends.

And they won't have to write any amendment to the constitution!

When the administration decides they don't want anything to do with a previous agreement, they can simply pull out. I don't see any surprises heading our way. The only answer is for the average amateur is to try and save up some money and raise his/her output level the same 10 dB that BPL will allegedly "only" add to the background noise :))

I would, however, suggest we invest in clean, legal amps and not try SSB or AM with some of the alleged class "C" boxes they sell for 11 meters LOL

BTW, this is off-topic, but did anyone notice that Japan has given the green light to human cloaning experiments? Most interesting what Professor Steven Hawking has to say on his website about genetic engineering (this was on his website long before the Japanese announcement).

Thankfully, I doubt I'll be around to witness the outcome of human genetic engineering. You think we have problems now?

Pardon me, I think I'm going to start on a half-wave beverage antenna. 160 meters. I'll lay in the necessary cases of beer tomorrow. I may not be in any shape to see any more comments on this for a week ;)

re: > > LenAnderson@ieee.org [Life Member]

Dan > But I'm not an engineer. Is language somehow different for us common folk?

Dan - Don't assume Len (IEEE life member) is a radio engineer qualified to comment on the impact BPL will have on radio communications. IEEE is an organization that left the average working engineer out of its politics and goals a long time ago. IEEE is heavily dominated by academia and big business management types. Working engineers pay much of the dues, but don't get much consideration because the officials who have the time and money to run the IEEE are school and management people. So don't blame the average engineer for anything the IEEE comes up with. The IEEE will support what the universities and big company managers want. The technical considerations of running a broadband radiating system over miles of unshielded wires probably never got past the initial consideration of who wants to do this at the IEEE inner-sanctum. Politics comes before technological intelligence at IEEE, just as it does at the FCC.

I accept that, Jim, but as one poster here would tell you, morse code is
far older since it predates radio. That certainly makes it an
anachronism when compared to Fessenden. *snicker*

Well, it's a little older. But then again, voice transmission by amplitude modulation (the plain old wire telephone with office battery) is almost as old.

> That certainly makes it an
> anachronism when compared to Fessenden.

I guess so.

But then again, how old is the English language? How old is human speech?

Heck, the alphabet we're using for these messages is almost identical to the one some of my ancestors used over 2000 years ago. Those Romans used I for J and V for U, and they didn't have W, but the rest were pretty much as today. And the Roman alphabet was heavily influenced in large part by the earlier Greek alphabet used by some other of my ancestors. The Greek alphabet is still in use, both for the Greek language and in (get this!) mathematics, physics, and engineering.

Don't forget that those symbols we use for numbers are based on outdated
Arabic characters.

Dave Heil <k8mn@earthlink.net> wrote in message news:<410554F3.BC7E50DE@earthlink.net>...

> the second "T" in "AT&T" stands for "Telegraph".

Fun fact:

The old landwire telegraph, in its most basic implementation, used a simple but effective on-off keying of a direct current. One wire and ground return carried multiple messages by means of time separation (what we would call time division multiplexing, or TDM) today. Messages to and from different senders and receivers were sorted out by message preambles and signatures - an early form of "frame relay", in which a message is encased by headers and footers for transmission.

In later implementations, multiple telegraph circuits were sent over the same wire by means of carrier, using different frequency AC signals on-off keyed.

The most modern form of electronic communication today for point-to-point fixed communication is fiber optics. It has replaced radio and electrical communication media for long distance point-to-point paths. Except for the local hookup to your home or business, and some legacy and special purpose installations, most "electronic" communication today goes most of the way by optical fiber.

And in its most basic implementation, fiber optics uses a simple but effective on-off keying of a light beam. One fiber carries multiple messages by means of time separation, called time division multiplexing. Messages to and from different senders and receivers ('sources' and 'targets') are routed by message by headers and footers. In addition, a message may be divided into pieces (packets) for transmission.

In more advanced implementations, multiple fiber signals are sent over the same fiber by means of different light wavelengths.

But the basic fiber optic communications mode is on-off keying.

How about that! The more things change...

> Regarding your question on noise levels - that one would best be
> referred back to the FCC, as it's their call. Which, for all intents
> and purposes, appears to have been made already......

Maybe. It seems that the best hopes of BPL defeat come from:

1) Local groups of affected amateurs, aided by a strong national
organization (as was done in Cedar Rapids, Iowa) where formal
complaints of actual interference eventually shut down a trial system.

2) Competing technologies (such as "Wi-Fi", cable, DSL, etc.) beating
BPL in the marketplace on price, service, reliability.

3) The costs and headaches of filtering, answering complaints, etc.,
all eroding the BPL bottom line.

4) Possible personnel changes at the Federal level...

You'd think "intelligent business people" would realize those
things...

>
> Which is why I didn't.. :)

Not talking about voiding prohibitions. I'm talking about situations
where a variance or permit is required, and can be granted without
violating contracts *but* requires approval by some board or other.

If you can find a house with no anti-antenna CC&Rs, that's just the
first part of the problem. If you want to put up any sort of tower or
other antenna structure, many areas require building permits,
inspections, and zoning board approval. Approval often hinges on how a
request is presented.

> >>>"Avocation" is much better word, I think.

Then there should be absolutely no problem using "avocation" rather
than "hobby".

And there are also different definitions for different people. While
you may call it a hobby, others call it something quite different. In
Europe it is common to refer to amateur radio, or certain facets of
it, as "radiosport", which is a pretty good term, I think.

Didn't they have repeaters by the '80s? Groups too small to support
machines??

> A third, less heavily used frequency was used by W8JIN, W8SUJ and myself
> for chasing stuff on 160m.

Good idea. Monitoring an active repeater all day all night drives me
nuts. So I don't do it. Thus there is merit in parking on some nice
quiet obscure simplex freq which only lights up when specific
soulmates have something to say, a sort of ultimate intercom.

I'm noticing that those sorts of ops are increasing being used these
days. With the recent coming of all the new compact 160-70cm rigs a
lot of folk are using 2M "simplex" ssb for chit-chat with their buds.
Big advantage over FM given SSB's inherent path gain.

I'm also noticing a drop in 2M repeater use. Dunno what that's all
about but it's happening. Maybe repeaters have lived their lifespans?

> It is interesting that a very active

That looks like it's maybe a 50 mile path, do you get relaible
connects? Last time I checked we have about a dozen "local" nodes.
Depending on the definition of "local". A couple of 'em are in the
range of 75 miles out and are not usuable here. But I have one which
is less than 20 miles out and he's full quieting with a wet noodle on
an HT.

The local nodes are interconnected north and south to the D.C. and New
England areas. The northward path out of here gets turned off during
the dx contests. War! To hell with feeding the enemy our spots, let
'em find their own mults! But we do work with our allies to the south
during the 'tests.

The problem with a big network like this is that often too many spots
come thru and the spots screen looks like something James Joyce is
writing at Mach 2 and the systerm craps out. The big push now is
toward Telnet spots . . ugly!

At this point I'm leaning toward running unassisted during the 'tests.
With only 100W, electrical noise and lousy antennas I'm probably
better off just going sniping on my own.

That's right. The gang went from simplex FM channels to Packet.

> > A third, less heavily used frequency was used by W8JIN, W8SUJ and myself

It was great. Only those chasing new ones on top band bothered showing
up. If anyone keyed a microphone and it wasn't for a spot, it was for
something related to 160m activity.

> I'm noticing that those sorts of ops are increasing being used these

The disadvantage being that not everyone has SSB capability on 2m.

> I'm also noticing a drop in 2M repeater use. Dunno what that's all
> about but it's happening. Maybe repeaters have lived their lifespans?

It is much the same story here. Aside from several regularly scheduled
nets, activity is spotty.

> > It is interesting that a very active
> > telephone callup list was maintained by SWODXA until 1982 or so.
>
> Whew: Had to be the last of those Mohicans.

I think it must have been. When I went to Finland the first time, in the mid-1980's, there was a Helsinki 2m FM spotting net on a simplex frequency. A couple of years later, everyone was using packet. Now the spots are available, believe it or not, on a Helsinki cable TV channel. Spots are repeated on 2m FM via synthesized voice and they appear on the local packet cluster.

> connects?

I think the path is a bit longer as it is about 86 miles by road. I can get in reliably with a 1/4 wave antenna and five watts. I usually run ten watts and five elements aimed toward P'burgh.

> Last time I checked we have about a dozen "local" nodes.

We had a local node until WB8ZTV moved away. The problem was that the node was in the Ohio Valley at Moundsville. It was easier for me to hit Pittsburgh from here.

> The local nodes are interconnected north and south to the D.C. and New
> England areas. The northward path out of here gets turned off during

I use spot filtering to avoid seeing everything. I'm not doing any telnet work but am checking the OH-land DX Summit via internet periodically.

> At this point I'm leaning toward running unassisted during the 'tests.
> With only 100W, electrical noise and lousy antennas I'm probably

Another angle: A 1955 Tech = CSCE for general theory, plus the
ability to use VHF/UHF. So the tech can go back to try the
13wpm test later. Did they let techs back then to use Novice
privs? I remember that around 1970 you could not use novice
privs if you had a tech. And they wouldn't let you have
a novice license and tech at the same time. Seemed kinda
stupid, probably a bureaucratic screwup when writing the rules.

That seems true when looking at the page
http://www.ah0a.org/MPT/JA-Stations.html

but looking at the page
http://www.ah0a.org/MPT/JA-Op's.html
they seem to be still increasing. What's the difference between
"stations" and "operators"? Here in the USA the FCC used to define
your station as being your ham shack (and that was what got the
callsign) but they changed it to reflect the precieved reality
that hams think of their callsigns being their personal FCC ID
and that they use it no matter what shack they happen to be using.

Their beginner class seems to hold about 92% of their ham polulation.
You would expect a lot of drop outs; people deciding that they are
not into radio after all. Imagine for a moment that CB was a
"beginner USA ham" license. Now that you're done barfing :-) figure how
many CB sets are sitting in back of garages and closets gathering
dust. Way back in 1976 I played around with CB and decided that
I liked 2 way radio and decided to get the ham license (just a tech,
but still a real license). CB back then was supposed to be a limited
distance and limited contact service (no casual "CQs" or "QSLs", that
was ham radio) but things got out of control and the FCC said "screw
it" and let it go. Many people played with CB for a while and
then dropped out. A few decided to become hams. And then there
are freebanders but that's another issue...

Real estate issues mainly I would think. How many JA hams
can afford to buy a single family detatched house on a quarter
acre plot? In a city where they can find jobs?
Most are in condos and apartments with the usual
antenna issues. And their economy is still in the toilet...

I suppose if the VEs came with a stack of callsigns, like
a stack of license plates at the local DMV. You pass the tests,
and the VE hands you a callsign off the top of the stack,
and the VE sends the info to the FCC. It would be interesting
if there was a big session and most everyone passed. And
everyone in town had adjacent callsigns. "Oh, did you say
XX#XXc, hi Dave, or XX#XXf, hi Tom?"...

Sure thing ..... go down and pay money to take a test from some local clown who demands you know how to build a radio or antenna from scratch and learn a form of communication that went down with the Titanic. Hell even the military gave up that form of communication years ago but not the hams. Make the test meaningful, charge a $1,000 for the license with strict enforcement of rules and I'd pay in a minute and don't give me this crap about a no code because it is a useless freq. and you know it. Charge $1.00 in the manner it is set up now and you know what you can do with it. No ..... it's not the CBer that is stupid one but the idiot ham's that think the world revolves around their shrinking little hobby.

A lot!

In Japan, operator licenses never expire. So the number you see under "operator licenses" is not the number of current JA hams but rather the total number of hams that have ever been licensed in JA since 1952.

But station licenses have to be renewed every year, and cost a modest fee. So the number of JA station licenses is a much better indicator.

>it" and let it go.

Yep. I would say they lost control sometime in the late 1960s or early 1970s.

>Many people played with CB for a while and
>then dropped out. A few decided to become hams. And then there
>are freebanders but that's another issue...
>
Freebanding as we know it derived from cb. That's why it is concentrated around
27 MHz.

Part of what happened in JA is that ham radio was popular for a time as a sort
of cheap cell phone - people got licenses and HTs to be in touch. But now that
the cellphone infrastructure in JA has been built up and the costs are way
down...the rest is obvious.

It's so nice to have people promoting ham radio. And the with the gracious way you project it Al we'll be overrun with new applicants. Week after I got my new 2002 Quad cab 4X4 I was drilling holes in it for antennas. I've been a ham for 30 years off and on. I even own 3 CB radios. I have to admit I don't have any antennas up for them (CBs) now. I didn't buy the truck not to drill holes in it.

Boy, I am sure that encouraging comment will make him want to run right
out and become a ham. What kind of call is W5O0XO? It isn't a ham call.
I would say maybe you need to get your ham license but if you make
those kind of comments then ham radio can certainly do without you.

I think by now we all understand your position on ham radios. I do not personally own a ham radio, nor do I desire to own one. I may be overstepping my bounds by speaking for the group as a whole, but I will anyway. The question was about CB radios. It was a specific question about CB radios. It was not intended to open a discussion about alternatives to CB radios. I get hours of enjoyment operating my CB when on road trips. I like the idea of being close in proximity of the person I am talking to. It seems to make conversation more personal. If I wanted to talk to people at long distances at random I would use my free long distance calling minutes on my cell phone dialing at random to far away places. Thank you for suggesting the use of ham radios, as some readers may consider this as an alternative to the topic being discussed. By the way, you are a cross-posting troll. If there is not enough message traffic in your pathetic radio group to keep you entertained all you have to do is subscribe to additional newsgroups.

No avoidance at all, Jim - it was a very broad question, and it
received an appropriate answer. We aren't talking about all
activities - but your question was.....

>
>Do the choices for what to call Amateur Radio break down into either
>'job' or 'hobby'? Or are there other possible choices?

Well, 'Job' is out of the question, because that would be illegal by
definition (the amateur thing, not for pecuniary interest -
remember?).....

'Hobby' appears to be the preferred term used by the organizations
representing amateur radio (ARRL, RAC, RSGB et al.)

What other choices (that are not synonomous with the word "hobby") do
you have in mind?

>>
>> >>>FCC Part 97 does not use the word "hobby" even once. I doubt the Canadian

>The don't use the word at all.

Their definition fits like a glove, though! "hobby" is an informal
word - you won't find it in Governmental doctrine. They don't say
"fun" either, but it is!

I believe that's what we do - when formally responding to requests for
comment and such.

Round here in the group, and on the air, and at the club, it's a
hobby.

>
>> >>BTW, do you believe that any sort of case we could make would sway the

>
>"Intelligent business people"? Like the ones who did the Iridium
>system? Or brought us to boom-dot-bust?

Look up - Iridium is still up there. Globalstar is still in business
marketing satellite phones (and carrying traffic using the Iridium
birds).

There have been many dot-com successes as well - check out the Google
IPO this week! Wish I had a piece of that...

Just guessing, but you never worked in the Telecom industry, did you?
Spending huge amounts of money on infrastructure up front is how they
work....public access networks are incredibly expensive to deploy, and
the subscribers don't come with their monthly fees until later, after
it's built.....then there are expansions, and new service
areas.....whew!

>
>> >Emphasizing that we are *licensed radio operators* makes a stronger case than
>> >*hobbyists*, I think.
>>
>> That's a far better way of approaching the situation. In fact, it's
>> the only compelling one that we have.
>
>Right! So we use those words - not "hobbyists"

We're both!

Considering that the ARRL is by far the largest Amateur Radio
organization on the planet opposing BPL at the political level right
now, you may wish to take this up with them directly - they are
representing a "hobby", as they proclaim on many of their documents
and web pages. Perhaps they are sabotaging the effort?

Why would they do that, if there was the slightest possibility that it
would be detrimental to the hobby?

Exactly. There isn't.

>
>> >>It's the regulators who we are dealing with on this issue, and they

>2) Competing technologies (such as "Wi-Fi", cable, DSL, etc.) beating
>BPL in the marketplace on price, service, reliability.

This is the big one - competing technologies which simply make more
business sense than BPL. Don't forget the satellite and large-scale
wireless technologies too (wi-fi is very localized - small coverage
area). The marketplace will decide what succeeds and what doesn't.

>
>3) The costs and headaches of filtering, answering complaints, etc.,
>all eroding the BPL bottom line.

Um, the Hydro companies don't have a very good track record of
responding to complaints right now - you don't think that they
actually care, do you? Bzzzzzzzz.

>
>4) Possible personnel changes at the Federal level...

At the absolute highest level, actually! (ever listen to the mantra
from the Top on "broadband internet access for all"? What crap.

>
>You'd think "intelligent business people" would realize those
>things...

Just when you thouhgt it was safe to go back in the water....

Quotes from ARRL's webpage.

Please note that ALL representitives of the Army MARS program (Including Chief Army MARS) possess an Amateur Radio license.

Also please note that an integral part of Grecian Firegbolt 04 was interoperability between Amateur Radio nets and MARS nets, facilitated by participants who were members of both.

(One unlicensed person and his witless sidekick have stated that these things don't happen...Proof again that THIER understading of what MARS is, who comprises it, and it's dependence on Amateur Radio is not accurate.

BEGIN QUOTE

(caption of picture)

To participate in the US Army Reserve's nationwide emergency communications exercise in June, Delaware amateur John Scoggin, W3JKS/AAA9AC, second from left, and MARS Eastern Area Coordinator Robert Hollister, N7INK/AAA9E, right, donned "civilian" uniforms at Fort Meade, Maryland. They are shown in front of Scoggin's Emergency Communications Unit, which volunteer MARS members used while providing emergency support an Army reserve unit during Grecian Firebolt 04.

(caption of second picture)

They're hams, they're civilians, but to participate in the US Army Reserve's countrywide exercise in June these five members of the Military Affiliate Radio System donned uniforms that facilitated their support operation at Fort Meade, Maryland. John Scoggin, AAA9AC, a volunteer from Wilmington, Delaware (left), brought his MARS Emergency Communications Unit to Ft Meade, where it connected MARS members in 50 states with the headquarters of Operation Grecian Firebolt 04--the biggest MARS exercise ever. Next to Scoggin (from the left) are MARS members Justin Kates, KB3JUV/AUX3AC, of Lewes Delaware; Army MARS Chief Robert Sutton, N7UZY/AAA9A, from Ft Huachuca, Arizona; John DiGiovanni, N3LUD/AAT3KG, of Wilmington, Delaware, and Army MARS Eastern Area Coordinator Robert Hollister, N7INK/AAA9E, from Ft Huachuca.

(text follows)

ARES has Limited Role in MARS "Grecian Firebolt 2004" Exercise
NEWINGTON, CT, Jul 27, 2004--Amateur Radio Emergency Service (ARES) volunteers in eastern New York took part in Grecian Firebolt 2004 (GF04)--the annual Military Affiliate Radio Service (MARS) communications exercise in mid-June. This year's multi-purpose exercise involved a homeland defense/homeland

security scenario. It included the development and processing of messages by volunteer members through the MARS radio system; interface with selected military locations via HF radio; testing and evaluation of new technology such as HF radio with Automatic Link Establishment (ALE) and establishment of HF radio connectivity with the Federal Emergency Management Agency and other entities. MARS joined all communications units of the US Army Reserve in the nationwide exercise alongside.

"This was not only the largest exercise in MARS history, it was one of the best planned and executed that was both exciting and truly a combined-service integrated event," said Army MARS Chief Robert Sutton, N7UZY/AAA9A. "In simple words the challenge presented MARS was successfully met, and the bar was raised one more time."

ARES had agreed to limited participation in GF04, and during the exercise MARS and Amateur Radio operators cooperated to establish a working interoperability relationship between Army MARS and ARES members in eastern New York. The test was intended to check out crossband communication capabilities. ARES participation in GF04 started June 15 with the activation of an ARES emergency drill net on 75 meters, while a New York State MARS emergency net was at the same time on a MARS channel. After both nets were established, each net control station appointed a liaison to the crossband circuit, and traffic passed successfully between the nets. Among participating ARRL ARES stations was ARRL New York City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D.

Grecian Firebolt 2004 provided MARS members with the opportunity to link with other agencies and military units and to experiment with new technologies. MARS support for GF04 also provided significant training and a chance for MARS to display its capabilities to support the military and other government agencies as part of homeland defense and homeland security.

"Many important individuals have experienced first hand what MARS is all about," Sutton concluded in a message to MARS members. "All of you [who] participated have bragging rights for a job well done."

Until the mid 1960's, most of the non-Flag-carrying "small boys"
(destroyers, submarines, frigates) still used Morse for passing traffic
ashore. With the advent of Orestes (covered Baudot) in these
hulls, about 1963, the widespread training of Navy Morse code operators
ceased. After that point, each ship had a complement of 1 or 2
Morse-familiar operators "just in case" until the 70's when even that
modest capability was no longer maintained.

Come into the 21 century and get a Nextel if want a two-way radio. If need to know about traffic use your AM radio every big city out there has a 24-7 AM station with traffic reports. Need directions use a laptop with a g.p.s. receiver. If you want to talk with the truckers good luck this trucker hasn't had a CB in his cab for the past 3 yrs.

No shit on that.

Most Truckers I know, and I do know a few, are listening to their Sirius
Radios and don't have time for their CB's any longer. ;-)

>13wpm test later.

Well, sort of.

The original Tech privileges (1951) were only for 220 and up. About 1956 IIRC,
Techs got 6 meters. Somewhat later, they got 145-147, and only later (1970s?
did they get full VHF/UHF.

>Did they let techs back then to use Novice
>privs?

No.

>I remember that around 1970 you could not use novice
>privs if you had a tech. And they wouldn't let you have
>a novice license and tech at the same time.

That was true only for a few years in the 1970s.

>Seemed kinda
>stupid, probably a bureaucratic screwup when writing the rules.
>
No, it came from another source.

Prior to WW2, FCC and its predecessors were kinda laid-back about what the
various radio services were supposed to do. IOW they mostly let them evolve and
define themselves.

But after WW2, the concept of "social engineering" took hold, and FCC got into
the business of not only regulating but *directing* the various radio services.
New services, like the "citizens radio service", were simply created by FCC
because they thought such services were needed. Existing services got "basis
and purpose" definitions added to their rules.

In the case of the ARS, FCC restructured from 3 to 6 license classes in 1951
with several goals in mind. Some of these came from amateurs but some did not:

- The Novice was meant as a "get started quick and easy" license (actually, a
learner's permit) for raw newbies.

- The old Class A/Advanced was to be replaced by the Extra as the full-privileges license. Its higher requirements would hopefully raise hams' level of technical knowhow and operating skill.

- The Technician was meant for those people who were specifically interested in the technical end of things - not operating. "Technical end of things" meant VHF/UHF techniques, not HF, to the FCC. A lot of this was driven by the explosion of VHF/UHF/microwave techniques during WW2. They imagined that a lot of radar technicians and TV technical people would become hams, and vice-versa. In fact when the original Tech license appeared, there was *no* ham gear manufactured for the bands allowed to Techs - they'd have to homebrew or convert equipment to get on the air! The Technician was *not* originally meant as a stepping stone to other licenses.

But in practice the Tech became something quite different. The FCC resisted well into the 1970s, trying to retain the original Tech concept, and thus the odd rules such as no HF for Techs even though they test included everything of the Novice test, and the General theory.

In many ways the old Tech was a sort of "trap" in that it cut off Novice hams whose year had run out from the very place they'd get the code practice needed to pass the General.

Which is why it all got fixed about 1975.

> Do the choices for what to call Amateur Radio break down into either
> 'job' or 'hobby'? Or are there other possible choices?

Of course there are "other choices". The world at large is not black
and white so neither is ham radio, it's the whole spectrum of greys.

Ham radio is my current primary hobby. There have been others over the
years. In my specific case I enjoy participating in certain ham radio
operating activities and that's the only reason I'm involved with it.
If ham radio was abolished tomorrow I'd be *really* irked but I'd
easily move on into something else to do for my jollies.

There are kids who got into ham radio for the same reasons I did and
wound up with engineering degrees as a result. As just one example of
how ham radio has sparked uncountable numbers of lifetime careers in
the physical technologies.

There are hams who are involved for the same reasons I am but take it
to a higher level and get into public service work.

There are entrepreneurial-spitited hams who get into the supply side
of the ham radio market and created part time cottage-industry
businesses based on their hobby. Some of those have taken it 'way
beyond both their part time and cottage industry roots. The Orion
comes to mind here.

There are hams who staff the radio stores as a matter of feeding their
families on the paychecks passed out by Corporate America.

Yadda, yadda . . endless circular nit-picking nonsense.

> And there are also different definitions for different people. While
> you may call it a hobby, others call it something quite different. In

Back in the gud ol' days ('58), the non-renewable Novice license was good for only 12 months, starting from the application date. So, when the FCC got around to sending out my ticket after three months, it was good for just 9 months. I really liked it when I submitted an application to get my original call (less the "N") back as a vanity call last year, and only had to wait a few days before the FCC posted the call on their database and I could start using it. Lesson: Sometimes, change is good, and computers are not all bad.

Who cares if you get a ring on the roof anyway. I'm 6' tall and need a ladder to see the top of my roof ('03 QC Laramie 4X4.) No one is going to get a ladder to look at the roof when inspecting a vehicle prior to purchasing.

Now that was unfair. Jim gave his example, and as I read it I thought
about how some kid would take the test before school ends, and not be able
to make use of the license till school starts again.

It was much faster in Canada. I took the test in May 1972, and failed the
code receiving test. I think (can't remember) that I knew I'd failed the code
test, but about a week later I received the notification. So the next
month (the amateur testing took place once a month at the time) I went
back down, and only had to retake the receiving test, and that time I
succeeded. That was the week before school ended. I come home from
the last day of school, elementary school, and the results were there. I
then had to get a station license, and that took about a week.

Mind you, the way things were arranged, it was all handled at the local
office. The paperwork was not being shipped to Ottawa to be handled in a
central location.

Right. But very few of those Techs ever went anywhere near VHF/UHF
radio, the Tech ticket was basically used to hold onto callsigns while
working toward a General. Or they simply dropped out of ham radio.

> So the tech can go back to try the
> 13wpm test later.

I think that's right but I don't remember the particular details since
I didn't take that route.

> Did they let techs back then to use Novice
> privs?

No. You could not hold two different classes of operator's licenses,
they were one or the other.

> I remember that around 1970 you could not use novice

No, it was quite intentional on the part of the FCC, the FCC was
proactive in those days and was big on generating incentives to
upgrade.

Several HF frequencies are used by coast-to-coast truckers.
Most popular cross country chit-chat frequencies are found in
the 6, 8, & 14 mHz ranges. In the freeband range, 28120 kHz is
but one popular frequency. There are several others. Cross country
truckers prefer freeband channels above 28 mHz, as they are less
congested. HF is also a convenient way to stay in constant touch
with moma back home too. The HF radio at home and in the truck
are left on 24/7. "Kitchen radio frequencies" can be found above
28 mHz and also in the 6 mHz band.

At least in the early going, you could be dual-licensed as a Tech and a Novice. Lot's of guys had simultaneous Novice and Technician operator licenses with separate station licenses (and call signs).

You avoided the question, plain and simple.

> >Do the choices for what to call Amateur Radio break down into either
> >'job' or 'hobby'? Or are there other possible choices?
>
> Well, 'Job' is out of the question, because that would be illegal by

> representing amateur radio (ARRL, RAC, RSGB et al.)

I'm not asking them.

> What other choices (that are not synonomous with the word "hobby") do
> you have in mind?

You're avoiding the question again. All I asked was if there were more
than the two choices 'job' and 'hobby'.

For some reason you avoid giving a straight answer.

> >> >Do they use the word 'hobby'?
>
> >> See below.

> would be detrimental to the hobby?

Simple. They don't see it the same way.

> Exactly. There isn't.
>
Really?

ARRL also supports at least some code testing for an amateur license.
Why would they do that, if there was the slightest possibility that it
would be detrimental to the ARS?

Agreed! So the "intelligent business people" pushing BPL may, in the
end, not be so "intelligent"?

> Don't forget the satellite and large-scale
> wireless technologies too (wi-fi is very localized - small coverage
> area). The marketplace will decide what succeeds and what doesn't.

Satellite is inherently limited due to transmission delay and
restricted bandwidth. Fiber for the backbone is the future for all but
special applications.

Of course not, Captain Obvious. There are all sorts of activities which are neither a job (paid occupation) nor a hobby (avocation).

But for 99% of us, amateur radio is an avocation. For a small number of enthusiasts it seems to be a vocation (which is obviously not an avocation, but is different than a paid occupation).

For me, it's just good interesting fun. I guess that makes me a radio hobbiest, and I'm happy to accept that term. Nowhere does that presume that my "fun" is inconsistent with the PICON.

Sunuvagun!

Languidly tweaking the nose of fate, thus spake Leo <nomail@noway.com>
:

>This is the way to roll out high speed Internet access to rural areas
>- wonder if this will make BPL a less attractive alternative?
>
>Hope so!

The PR release is really stretching things quite a bit:

>While Internet access is already offered via satellite today, such
>services are used primarily by businesses that can afford the premium
>price. Consumers who subscribe to a satellite service provider pay two
>to three times the price charged by cable and DSL companies and must
>rely on cumbersome dishes about one metre in diameter.

DirecWay (the leading provider of two-way high speed satellite
Internet access) charges $59.95/mo. for its service (with higher price
services available to larger business users)--which is pretty
compatible with the price of Cable or DSL in most areas. In fact,
since most dial-up users have dedicated telephone lines for their
modems (a telephone line isn't required at all for DirecWay 2-way
connections), which costs around $30-40/mo, plus the price of a
dial-up isp (another $10-20/mo) for a total of between $40-60/mo, and
a speed only about 1/35 that of DirecWay, I wouldn't say it was a bad
price at all.

The dish IS close to a meter in width (just under 3') and
about 18" in height--but in addition to providing the feed to the
DirecWay receiver, it also allows up to four DirecTV receivers to be
connected as well (assuming the DirecWay customer is also a DirecTV
customer--which isn't required for the Internet service, but usually
IS required for Cable Internet), which means only one antenna for both
uses. I doubt that very many hams would be bothered by a 36"x18" dish
being "too large" and most non-hams don't see it as a problem either
since it's only about 1-1/2 times the size of a standard DirecTV dish.

>"What you have right now is a digital divide where urban areas receive
>broadband and rural areas are devoid of any affordable consumer
>service."

DirecWay is available anywhere in North America where there is
no significant blockage of the signal path to the South West--the same
requirement that will (obviously) be present for the new system.

>"All of a sudden, right off the bat, you'll have coverage all over
>Canada," said Paul Bush, vice-president of broadcast and corporate

>development for Telesat. Subscription prices will be slightly higher
>than traditional DSL and cable services, but the technology is not
>geared at the urban centres these existing products serve, he said.

Translation: The price will probably be higher than DirecWay
is now and the service area the same.

>The Anik F2 is massive by earlier commercial satellite standards. Its
>panel of solar arrays, once unfolded, will stretch across almost 50
>metres of space. One of the reasons for the size is the amount of
>solar and backup power required to transmit the Ka-band signals to
>small receiver dishes on Earth. Another is the fact that the 'bird' is
>designed with several bands to carry voice, video and data signals.
>These multiple capabilities reduce the risk associated with carrying
>the new and commercially unproven Ka-band, Mr. Dykewicz says.

How does carrying voice, video, and data signals act in any
way to "reduce the risk associated with carrying the new and
commercially unproven Ka-band?"

>Telesat's biggest challenge won't be the new technology so much as
>proving that there is in fact a commercially viable market for
>broadband service in rural and remote areas of North America, he said.

DirecWay seems to have done that quite well already.

Nice hype--but no substance at all!

Hans,

When would that have been? When I obtained my novice in 1962, it was
only good for 1 year, was non-renewable, and I *think* (not sure) that
you could not hold another class of ticket. i.e. if you passed your
tech, that was the end of the novice.

I don't think that's the way it was.

My 1967 Novice was effective October 12, 1967, and arrived in the mail October
14, 1967. The long wait through the summer of was all because of backlog at
FCC.

> So, when the FCC

>>
>>
>Now that was unfair. Jim gave his example, and as I read it I thought
>about how some kid would take the test before school ends, and not be able
>to make use of the license till school starts again.

And that was if you passed it on the first cycle.

Taking an exam at an FCC office could be just as trying, too. FCC exams were
only given on weekdays that weren't federal holidays. If you were a working
person, count on at least a half day off from work. If you were a kid in
school, wait for summer or holiday break - *if* the holiday didn't close the
FCC office.
And if you lived far from an office, you had the travel difficulties too.

If you flunked a test, you had to wait at least 30 days to try again.

>It was much faster in Canada. I took the test in May 1972, and failed the

>the last day of school, elementary school, and the results were there. I
>then had to get a station license, and that took about a week.

Let's see - when I got the Novice, I had just started the 8th grade.

Didn't Canada used to have an age requirement of 15? If so, when was it
removed? (The USA never had any age requirement, and rightly so...)
>
>Mind you, the way things were arranged, it was all handled at the local
>office. The paperwork was not being shipped to Ottawa to be handled in a
>central location.

FCC was totally centralized by 1964, if not much earlier.

Of course today's better accessibility is to the good. But it's not without a
downside: In the bad old days, getting to an exam was such a bother than most
hams were way overprepared by the time they actually took the test.

That's not a "freeband" frequency.

It's allocated to the Amateur Radio service...worldwide, I might add.

And it causes me no loss of sleep to drop a KW of CW bootleggers when I
can, no matter how long it's been since daddy's hoochie-cooed with mama....AT&T
calling cards are dirt cheap at Wal-Mart and Sam's clubs, and 100% legal.

There aren't any so called "freeband" channels. All those frequencies outside the legal 40 cb channels are allocated to other licensed services, even if you don't hear anyone using them, they are still allocated.
The frequencies between 28.0 MHz to 29.7 MHz are allocated to the Amateur (Ham) Radio Service 10 meter band and requires an amateur radio license to transmit on those frequencies. And yes the hams get upset, and rightfully so, when unlicensed radio operators encroach on the ham bands. The hams took tests to obtain their license and earned the priviledge to operate on those frequencies and do not welcome unlicensed operators who interfere.

1252. Multiple License Classes

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-29 00:32:45 UTC

Concerning the simultaneous holding of Novice and Technician class licenses:

Looked in my ARRL License Manuals. It turns out that:

1951 edition: Novice and Tech could be held simultaneously. Novice 1 year nonrenewable. Techs had no 6 meter or 2 meter privileges at all. Tech and Novice tests at FCC office unless you lived more than 125 miles from an exam point.

1953 edition: Novice and Tech could be held simultaneously. Novice 1 year nonrenewable. Techs had no 6 meter or 2 meter privileges at all. Tech and Novice tests at FCC office unless you lived more than 125 miles from an exam point.

(The Tech and Novice became by mail regardless of distance in 1954)

1962 edition: Novice and Tech could be held simultaneously. Novice 1 year nonrenewable. Techs had all of 6 meters but only 145-147 MHz on 2.

1971 edition: Novice and Tech could *not* be held simultaneously. Novice 2 year nonrenewable but could be retaken after 1 year off-air. Techs had all of 6 meters but only 145-147 MHz on 2.

It seems that it would have made a lot more sense from the start if Tech had carried Novice privileges from the start. But FCC thought differently, and did not want Tech to be a stepping stone from Novice to General.

Some time in the mid 1970s, all of these issues were pretty much resolved when Techs got Novice HF and Novice became 5 year renewable.

For a time in 1968 I held both Novice and Tech, and had two callsigns. Which one I used depended on the band. On 2 meters there were situations where I could have used either!

...except for one issue here in Canada - due to regulatory
restrictions, DirecTV cannot legally be marketed up here, or ordered
to a Canadian address (@#$%^& Canadian content laws....). Which
pretty much rules 'em out as a potential ISP as well..

The last point in the article is interesting, though - if the
satellite guys are concerned with the viability of the rural markets,
wouldn't that be a concern for the BPL guys too? ...assuming that's
their target market, anyway :)

Ditto for my Novice in the late 50s. It arrived in the mail only a couple
of days
after it was effective with a 12 month expiration. I had taken the test
about
3 months prior to receiving the license.

> tech, that was the end of the novice.

I'm not sure when the opportunity for dual-class (Novice and Technician) licensing ended, but it started with the 1950's restructuring which gave us those two license classes.

However, as has always been common in 'governmentese', there was an odd wrinkle in the rules. A Novice license was only available to someone who had NEVER held any other amateur license. (See FCC Part 12, &#65533;12.20(f).) Thus you could not apply for a Novice license if you already held a Technician license.

But you could simultaneously apply for both licenses (Novice, Technician)

Test elements required were:

Novice: 1(A) [5wpm] and 3(A) [Basic law/basic electronics]
Technician: 1(A) [5wpm], 2 [Basic amateur practice], and 3(B) [General regulations]

If you passed eveything you got both licenses.

If you didn't pass element 3(A) you only got a Technician license and were forever ineligible for Novice. However, if you passed the Novice but failed a written element for Technican, you could retest for Technician (after 30 day waiting period). However, when you retested for Technician, you'd have to take the complete battery including the 5wpm test, because FCC did not give credit for previous tests not given by an FCC employee, and Novice/Technician/Conditional tests were only given by volunteers.

That was the way it was, Jim. Why would I make it up?

> My 1967 Novice was effective October 12, 1967, and arrived in the mail
October
> 14, 1967. The long wait through the summer of was all because of backlog
at FCC.

Good for you, Jim; the FCC must have made some progress in those 9 years.

> > > So, when the FCC got around to sending out my ticket after
> >> three months, it was good for just 9 months.

> Do you still have the original license?

As a matter of fact I do have my original KN license, stamped "CANCELLED"
when I upgraded to the Conditional Class license. The "effective" date was
6-23-58, and the license was received at the end of September, 1958, with
nine month's left to go on it. So Jim -- you just go around calling people
liars because you "think" things had to be just the way it was when you got
around to being licensed? Strange dude.

ak

p.s. When I upgraded to Extra in '65, it still took three months to get the
upgraded license. But since it didn't affect my operating privileges back
then, it really didn't matter. The FCC was nice enough to call two days
after the Extra exam to let me know that I passed, so I didn't have to
wonder about it while I waited.

Although radio (i.e. via satellite) and hard wire (copper) still has
some usage. The satellite, especially on intercontinental hops.

> Except for the local hookup to your home or
> business, and some legacy and special purpose installations, most
> "electronic" communication today goes most of the way by optical

> for transmission.

> In more advanced implementations, multiple fiber signals are sent over
> the same fiber by means of different light wavelengths.

This is very common today. In the light spectrum, you'll also here
the use of different wavelengths as different colors. This combined use
of TDM (Time div mux) and FDM (frequency or color div mux)
results in an overall bit rate of 1.6 Terrabits/sec in a single
fiber...with stil higher speeds being developed/tested.

> But the basic fiber optic communications mode is on-off keying.
>

> How about that! The more things change...

True to a point, but the "on-off keying is pure binary (ones and zeros)
of equal length to creat the digital signal which is established according
to
various digital protocols (e.g. T1 = 1.544mb/sec which is typically
subdivided into twenty-four 64Kb voice/data channels.) The T1 is
a USA standard. Much of the rest of the world uses an E1 standard
which is 2.004Mb with 32 64Kb channels.

Here endeth your telcom lesson for today.

Cheers,
Bill

Just to add some additional time references to Han's data above.
I reported onboard the destroyer "Robert K Huntingon" in July 1966
and served on it until discharged in January '70. From day 1 onboard,
the radiomen never used morse for any actual comms except occasional
intership practice drills. ALL radio communications was either
teletype or voice. I was an electronic tech (communications designation).

Good for you, Bill. Maybe the FCC in Norfolk was handling things differently than your FCC office. I know that back then the Norfolk office had a problem using the right template to grade General tests; I didn't get caught by that one, but a friend did.

>For some reason you avoid giving a straight answer.

The answer to your quite rhetorical question is an obvious "no".

But 'hobby' sure seems to be a very popular choice!

Speaking of avoiding answers, though - here's your question again:

What other choices (that are not synonomous with the word "hobby") do
you have in mind?

>
>> >> >Do they use the word 'hobby'?
>>
>> >> See below.
>> >
>> >The don't use the word at all.

>
>Indeed - their definition fits like a glove yet doesn't use the
>"h-word"..

Nope, they sure don't.

Nowhere in the Motor Vehicle legislation does it mention the word
"car" either - but it's pretty obvious to most that that is what the
laws are all about.....

Except in Jim's World.

>
>> "hobby" is an informal
>> word - you won't find it in Governmental doctrine. They don't say

Thank God - I thought for a minute there that you might have been
offended by it.!

No need for brevity, though - I'll just put it right back up here for
you....

Many are synonyms - some seem to have been designed for the purpose of
confounding the illiterati! But, in the end, whether you call it an
amusement, art, avocation, bag, craft, craze, distraction, diversion,
divertisement, fad, fancy, favorite occupation, fun, game, interest,
kick, leisure activity, leisure pursuit, obsession, occupation, pet
topic, play, quest, relaxation, schtick, shot, sideline, specialty,
sport, thin, vagary, weakness, whim, or whimsy - it's still a hobby!

And one that I am proud to be a part of!

>

What you say is true, however it is very easy to tell when U.S. truckers
are using frequencies in the 10 meter band.

You are preaching to the choir. I hold both amateur & commercial licenses
and a military permit I won't mention here, as well as being an industry
professional for many years. My reference to "freeband" was intended
as such from the perspective of how a long-haul trucker refers to these
frequencies. Ergo, as far as a long-haul trucker is concerned, there is
such a thing as "freeband." When you go slumming in the trailer park, it
is very helpful to be able to speak the language of the trailer park, if you
catch my drift? Ask any street cop. Moreover, FCC jurisdiction ceases
where U.S. sovereignty ceases. The FCC does not have omnipotent worldwide
jurisdiction. Depending on many factors, certain operations which U.S.
amateurs mistakenly perceive as "unlicensed" radio operation may in fact
be quite legal in another country's jurisdiction. Childish statements by
U.S.

amateurs like, "I'll throw a 500 watt carrier on anyone transmitting freeband
in the ham bands," is going to land the perpetrator on Riley Hollingsworth's
short list. Corner Riley at a hamfest and ask him. I did, and he gave me an
ear full of info and advice.

Thank you for your support of amateur radio, a family hobby,

Bobby

It was removed in April of 1972. I took the test the first possilbe
chance the next month. I was twelve. If I wasn't the youngest ham
in Canada when I passed in June, I had to be amongst the youngest
at the time, since there'd been so little time to for many to even
try.

I've never seen any history of why that age requirement was in place,
or when it had been implemented (or if it had always been a requirement).
I was nine or ten when I learned of amateur radio, because of an article
in a magazine aimed at kids, and did expect to have to wait five years
or so before I was allowed to take the test. I do wonder if that made
a difference, because I did not set out to pass the test, but bought all
the hobby electronic magazines and QST that I could ahold of, plus
go through all the books about electronics that were at the library.
In December of 1972, I noticed a small article in the paper saying the
age requirement was being dropped (but it did not become effective for
a few months), and so I found a local club that had a code and theory
course. I came in late, but because I'd been reading about electronics,
it was less of a burden.

I had parental permission to get out of school so I could go to the DOC
office to take the test.

You left out the bits where Novices had 2 meter privileges, and even phone.
That's probably a shocker to those who came later, though I don't know if
the 2 meter privilege was there from the beginning. I gather when incentive
licensing came in in 1968, the phone privilege was dropped for Novices, but
modulated CW was still allowed (so if anyone wanted to use 2 meters, they
could take advantage of the available low end AM rigs, so long as they
hooked a code practice oscillator to the microphone input).

I think you're right, that the Novice should have been a stepping sone to the Technician. But of course, both were introduced at the same time, and originally had very different intentions, as you show. The Technician was indeed seen as a experimenters license, and not a communicator license

Given the time period of the fifties, 220MHz and above would be seen as quite limited, though of course, some of the inroads on VHF and UHF were made by those who "merely" had a Technician license.

Nothing of the sort, Your Exhalted Flippantness.

The Novice license gave privs on 3 HF bands plus 2M, and the Tech
provided privs on 220 and above. The two licenses complemented each
other very nicely.

With warmest personal regards,

de Hans, K0HB

Something very odd happened back then...

>So Jim -- you just go around calling people
>liars because you "think" things had to be just the way it was when you got
>around to being licensed? Strange dude.

Where did I call you or anyone else a liar? I simply thought you were mistaken.

Big difference between a mistake and a lie. I was mistaken about your license.

Sorry if it sounded like I was calling you a liar. That was not my intent - I simply thought you might be mistaken.
>
>ak
>
>p.s. When I upgraded to Extra in '65, it still took three months to get the

>wonder about it while I waited.

Hmmm...when I passed the Extra in 1970, they marked the exam as soon as I handed it in. I knew in a few minutes that I'd passed.

But that was in the Philadelphia office, not Norfolk.

And another OF:

First Phone, Broadcast and Radar Endorsements, 1959. That was back when you got a real "proudly-frame-it-and-hang-it-on-the-wall" license, not just a billfold card.

(Michael Black) writes:

>You left out the bits where Novices had 2 meter privileges, and even phone.

Yup, was focusing in other directions.

Here's a quick rundown:

The original 1951 Novice allowed operation on a tiny slice of 80 meter CW, 11
meter CW (!), and 145-147 CW, MCW and AM 'phone. (No FM, no SSB).

In the first few years, a bunch of changes occurred (in no particular order):

11 meter segment dropped
80 meter segment widened
40 meter segment added, then widened
15 meter segment widened

until by the late 1950s the privs looked like this:

3.700-3.750 CW
7.150-7.200 CW
21.100-21.250 CW
145-147 CW, MCW, AM

>That's probably a shocker to those who came later, though I don't know if
>the 2 meter privilege was there from the beginning.

It was.

>I gather when incentive
>licensing came in in 1968, the phone privilege was dropped for Novices, but
>modulated CW was still allowed (so if anyone wanted to use 2 meters, they
>could take advantage of the available low end AM rigs, so long as they
>hooked a code practice oscillator to the microphone input).

Exactly. Then 2 meters was dropped completely for Novices as the repeater boom
began.
>
>I think you're right, that the Novice should have been a stepping sone
>to the Technician.

It was!

What I emant to say was that *FCC* didn't mean for Tech to be a step between
Novice and General. They envisioned Novice as a learner's permit, Tech as an
experimenter's license for the ham more interested in homebrewing than
operating, and General/Advanced/Extra as "general purpose" licenses.

>But of course, both were introduced at the same time,
>and originally had very different intentions, as you show. The Technician
>was indeed seen as a experimenters license, and not a communicator license
>
There were all sorts of issues brought up about whether Techs could be in RACES or MARS (which were fundamentally about operating/communicationg, not experimenting) and whether Techs could be control ops for repeaters. This was all FCC social engineering, not something hams pushed for.

>Given the time period of the fifties, 220MHz and above would be seen as
>quite limited, though of course, some of the inroads on VHF and UHF were
>made by those who "merely" had a Technician license.

Sure. In fact, when the license first came out, there was *no* manufactured ham gear for 220 and up. A 1951 Technician had to be a homebrewer or converter of surplus just to get on the air.

>who had NEVER held any other amateur license. (See FCC Part 12,
>ï¿½12.20(f).) Thus you could not apply for a Novice license if you
>already held a Technician license.

Yep - or if, at some time in the past, no matter how long ago, you'd held some
sort of amateur license.

That "gotta be a newbie" clause went through some odd twists, too. First the
license term became 2 years (1967). Then the gotta-be-new requirement was
dropped about 1970-71 *but* you had to have held no license for a year, then
retest to get another Novice. Then the year wait was eliminated. Finally the
Novice became 5 year renewable like all the rest.

>But you could simultaneously apply for both licenses (Novice,
>Technician)
>
>Test elements required were:
>
>Novice: 1(A) [5wpm] and 3(A) [Basic law/basic electronics]

>
>If you didn't pass element 3(A) you only got a Technician license and
>were forever ineligible for Novice. However, if you passed the Novice
>but failed a written element for Technican, you could retest for
>Technician (after 30 day waiting period). However, when you retested
>for Technician, you'd have to take the complete battery including the

>5wpm test, because FCC did not give credit for previous tests not given
>by an FCC employee,

Until some point in the 1950s, not only did FCC not give credit, but if you moved within the "conditional distance", you had 90 days to retest at an FCC office or lose your license.

>and Novice/Technician/Conditional tests were only
>given by volunteers.
>
Novice and Tech were also given at FCC offices until 1954, at which time they became by-mail for everyone.

And yet with all those odd rules, restrictions and the difficulty of accessing the exams, US ham radio grew like mad from the end of WW2 (about 46,000) to about 1963 (about 250,000).

And just to make a point of showing what kind of a snivveling
twerp you are, let's recap, Brain....since you snipped out the part
that you were trying to "zing" me with, here's the truth...

YET ANOTHER QUOTE

Message 1 in thread
From: Steve Robeson K4CAP (k4yz@aol.com)
Subject: More MARS Stuff

View this article only
Newsgroups: rec.radio.amateur.policy
Date: 2004-07-27 20:58:08 PST

Just when you thouhgt it was safe to go back in the water....

Quotes from ARRL's webpage.

Please note that ALL representitives of the Army MARS program
(Including
Chief Army MARS) possess an Amateur Radio license.

Also please note that an integral part of Grecian Firegbolt 04
was
interoperability between Amateur Radio nets and MARS nets, facilitated
by
participants who were members of both.

(One unlicensed person and his witless sidekick have stated that
these
things don't happen...Proof again that THIER understading of what MARS

is, who
comprises it, and it's dependence on Amateur Radio is not accurate.

BEGIN QUOTE

(caption of picture)

To participate in the US Army Reserve's nationwide emergency
communications
exercise in June, Delaware amateur John Scoggin, W3JKS/AAA9AC...(SNIP
of repost)

END RE-QUOTE.

I know an apology will never ensue, so I will just take some
satisfaction in knowing that Son of Scumbag stepped in it again, and
that he is oblivious to just how stupid he REEEEEEEEALY looks.

Go ahead Brain...try and slip out of THIS one with the "hi hi"
bit about MARS-vs-Amateur Radio...It doesn't work.

WHEN will you learn?

You keep tripping over your own words. Perhaps if you stopped
and read what you wrote BEFORE hitting the "SEND" key it might work
out better for you. Especially if you were to make sure that WHAT you
wrote was correct in the first place.

Better yet, if you quit trying to mimic Lennie's "techniques" and
be your own man, that might help. Cutsie names that don't even come
close to describing those you are trying to belittle don't help
either. (I know you THINK you hear people "yelling" at you, but
perhaps those are just voices in your head...perhaps a bit of guilt
working against you...?!?!)

If you REALLY think I am yelling at you, then you really DO need
some help, Brain...Your assertions that you think >>I<< need "help"
notwithstanding.

Now, shall we work on your comprehension skills, or are you going
to keep on blindly flailing away as you've been...?!?!

> But that was in the Philadelphia office, not Norfolk.

Actually, the extra exam was taken on the top floor of the federal building
in Seattle, where you could see through the wall to the building on the
other side of the street thanks to their last quake. Actually, the exam was
a lot tougher than the First Class Commercial Telephone exam I had passed a
couple of years before. We had to hand draw several schematic circuits - I
think it was ten. So it took a bit more to grade than just using a template
or number answer book to grade the exams. Also, they wouldn't allow
transistor circuits. So, for the audio cathode-follower circuit, I drew out
an emitter follower and then made the collector a plate, the base the grid,
and the emitter the cathode. Oh yes, and then I had to remember to draw in a
filiment. HI

Exactly, but that requires work & time which most folks don't want to invest to catch the "freebanders" and other unlicensed ops. I have never been a federal bureaucrat but have had to work with them on many cases. My experience is to make your complaint as easy as possible for them to work, and they will give your complaint attention quicker than the guy who just calls up and whines about "someone" on 28120 doing "illegal" ops. Bureaucrats get credit for cases they solve. When you do most of the work for them, they see an easy way to solve a case and take credit for your work. Sort of a win-win situation.

Yup, sure was proud to earn my First Phone & First Radiotelegraph back
in the 60s. The amateur extra was a lofty goal way back when too. I
hung all my "paper" on the wall of my grandad's house, right next to my
dad's & grandad's paper. Now, you can probably take the same paper
and use it for toilet paper, for what it is worth (old fart here speaking,
hi).
Heard an extra class on a repeater the other day using "10-4" and "what
is your personal?" Too funny! On the commercial side, you got the guy
now with a Radiotelephone who repairs gear by prying out the "bad board"
with a heavy-duty screwdriver. Ouch! Guess you gotta just move on
with the times.

Ham radio
Amateur radio operators work along nine bands, or groups of
frequencies, in the high frequency range (between 1800 and 29,700
kilohertz) and seven bands in the very high frequency, ultrahigh
frequency and superhigh frequency ranges.

Thank you for taking the time to read this.

Your Freedoms are in jeopardy! RadioShack Corporation has filed an injunction in a Texas Court that has shut down an opinion website, http://www.radioshacksucks.com, in direct violation of the Freedoms of Speech, Expression and Peaceful Assembly, as guaranteed to us by the Constitution of the United States. If other companies learn of this, they will use it against any website that speaks out against that company. This is extremely dangerous, as it will change the face and scope of the Internet.

If Big Business continues to dominate our lifestyles, we will lose our freedom to worship as we see fit. We will lose our freedom to vote for the candidate that we think will do the better job. We will lose our freedom of the press to accurately report on current events. We will lose everything we have fought and died for in the past 228 years Do not tell this to the descendants of those that have bravely fought in previous battles and wars, for their ancestors would have died in vain. The Constitution will have been overruled by Big Business.

RadioShack is on a vicious witch hunt and will not stop until they dominate our lives. RadioShack must be stopped now, before it gets any later or any worse.

Here is what you can do to help: copy this letter and add your signature to the bottom. Mail it to the following people:

Leonard H Roberts
CEO RadioShack Corporation
100 Throckmorton Plaza
Ft Worth, TX 76102

The Honorable Kenneth Curry
401 W BELKNAP
153RD DISTRICT COURT
FORT WORTH, TX, 76196-0225

Thank you for your help and support.

IIRC, 10m is a world wide ham allocation, so anyone not a ham is
not legal. And Riley said that it's not possible to interfere with
an illegal operator. Unless an emergency is in progress, in which
case he'd would be legal for that emergency. Then lend assistance
or stand by if someone else is.

>>

That seems rather odd, in that transmitting a signal implies the
desire to communicate with someone. Otherwise what's the point?
Oh, there's a few limited applications like remote control model
aircraft, but that's gotta be a rather small population of hams.

I can see a serenio where a novice licensee goes to the FCC field
office and takes but fails the general code, but passes the written.
If he takes the tech license as a CSCE for the general written, he'd
lose his access to the novice frequencies and thus no code practice
on the air. So it's possible that he'd decline the tech by tossing
the application form rather than file it. But if his novice is about
to expire anyway (non renewable era) then he might as well take the
"CSCE" and come back later to take and pass the gereral code test.

I remember back in high school in 1970 I and my father went to the
local (NYC) FCC engineer's home to take (I wanted the tech) the tests.
I practiced with slow 5wpm practice records (those Ameco records)
but he sent code Farnsworth style, and I failed. He was of the
opinion that the tech license would ruin my ham "career".

Wow, an article that had the facts right!

I would add a sentence that says "unlike the internet or cell phones, ham radio requires no infrastructure other than the radio itself, an antenna, and a power source which could be a portable battery or a car's electrical system. That's a major reason hams can help in large area emergencies. But they also need hams with antenna towers outside the emergency area to talk to to get help. And they need a clean radio environment (no BPL) to hear the emergency operators."

>>

Back in 1976 I had to go to the NYC field office to take my tech.
They graded it while I was still there, and though I missed several
questions, I still had enough to pass it. One more than the minimum.
Did well on the code part, though. And I thought I would ace the
written and barely pass the code... I was a EE student then, too.

Yes, you can transmit over these illegal operators on 10 meters and it
is not considered illegal interference since the illegal operators have
no rights to be on those frequencies.

You are using faulty logic and certainly misrepresenting what Riley
told myself and others. Two wrongs NEVER make a right. One
thing old timers respect and is never mentioned today is the "spirit"
of ham radio. Deliberately hunting down what someone perceives
to be an illegal operation should always be left to the professionals,
especially if you plan to deliberately interfere with said operation.
You could be wrong. It is shocking how the character of ham
radio operators has radically changed in the last two decades but
not surprising when one views hams not only as hams but members of
American society. For a ham to state he/she intends to deliberately
cause interference was unheard of two or three decades ago. Today,
it seems to cause no alarm in the amateur community. Character
meant something years ago in ham radio. Today, one might ask,
"what character" and make the point precisely. Oh BTW, the U.S.
military is quite legal if they so chose to use the 10m ham band, and
they are definitely not hams. Do you want to take the risk of
deliberately jamming U.S. military communications? I think not.
I had this very discussion with Riley not too long ago, and he
agreed with my premise.

Thank you for your support of ham radio.

In the 60's I took my commercial telegraph and radiotelepone exams at the NYC office. (What better thing is there to do in NYC in the morning?) They did something on the First Class exam a VEC would be in big trouble for if he did it. In the test booklet, most of the answers were easy to eliminate. I got frowns from others taking the test by breaking out in laughter at some of the answer choices. On the tough questions, where I had to guess, I circled the two most likely answers and then selected one of the two choices for my best guess. The FCC did grade those tests while you waited. After several minutes, the Chief Engineer, knowing I had come up from NC to take the test, came over to me with four sheets from my test book and asked if I would like to look over any of my answers. I did, and basically changed my two-circle answers to the alternate ones. That did it; I passed! A neighbor of mine wasn't so lucky in Florida. He missed his 13 WPM multi-choice CW test by one answer. The FCC official noticed that he had written down "Alaska" correctly on his test copy sheet, but selected another spelling for his answer on the test sheet. The FCC examiner brought his test sheet over to him, looking at his copy sheet, and asked him if he would like to change his answer on that question. He thought she was trying to trick him, and said "no." And she said, "Well, then I'm sorry - but I can't pass you." HI He did pass on his next opportunity to take the test.

What's wrong with Radio Shack, anyway? I bought something there both yesterday and today. Had what I wanted a cheap enough. No problems.

Anybody can sue anybody. Why should this upset anybody. That's the American way. Sue enough people and you might even become a politician......maybe even a presidential or vice-presidential candidate. My freedoms are certainly not in jeopardy because RS sues somebody....quite the opposite. This just shows what freedoms we have.

The difference is whether your goal is to do something that is new and novel in a technical sense (the equipment and techniques are the focus) rather than having QSOs.

For example, some time back a couple of W7 hams worked 2 way EME on (I think) 23 cm. They used relatively low power (under 100 W) and small dishes (2 meters, I think). While EME isn't new, doing on such a high frequency with such modest equipment is. Most of the equipment they used was home-made or converted from other uses.

Compare this with a ham chewing the rag on 75 meters using a manufactured station.

Both QSOs have merit, but the focus is different.

>I can see a serenio where a novice licensee goes to the FCC field
>office and takes but fails the general code, but passes the written.

That happened to me first time I tried. So I had a simultaneous Novice and Tech for a short while.

>If he takes the tech license as a CSCE for the general written, he'd
>lose his access to the novice frequencies and thus no code practice
>on the air.

Yep. But that situation only existed after the rules changed, about 1970 or so.

>So it's possible that he'd decline the tech by tossing
>the application form rather than file it.

Actually, the way FCC gave exams was code first. So s/he would just say "see you in a month" and leave after a failed code test.

>But if his novice is about
>to expire anyway (non renewable era) then he might as well take the
>"CSCE" and come back later to take and pass the gereral code test.

Yep. Also locks in his callsign, back in those pre-vanity-calls-for-the-masses times.

I always thought that Tech should have had *at least* Novice privileges, since the test required everyhting a Novice did. But FCC thought differently.

FCC reached a high point in this thought process about 1975, when they proposed a *7 class* "dual-ladder" license system. One "ladder" was HF oriented and the other VHF/UHF oriented. Extra was at the top of both ladders. Many hams would have held dual licenses such as "Novice/Technician".

>I remember back in high school in 1970 I and my father went to the
>local (NYC) FCC engineer's home to take (I wanted the tech) the tests.
>I practiced with slow 5wpm practice records (those Ameco records)
>but he sent code Farnsworth style, and I failed. He was of the
>opinion that the tech license would ruin my ham "career".
>
For some hams, it was a trap of sorts.

I knew more than a few hams back in the 60s and 70s who got Novice/Techs, but focused on VHF 'phone because it was easier and cheaper to get a station on the air for, say, 6 meters than for 40. Plus they could work mobile.

Trouble was, they often put off upgrading until the Novice was almost expired, or expired. IOW they wasted their Novice year. The various changes from 1967 to 1975 were attempts to fix the problem.

Novices who focused on HF operating were usually ready for the General within the year.

Actually at the time I had the dual licenses you were actually not using
up two different calls.
If you had started with just the novice you would have a KN call. If
you then upgraded all that happened was to drop the N. So basically
that call without the N was already reserved when you got the novice.
If you had both novice and tech then you had both a K and KN call with
the same suffix.

They had what were called 'counterpart calls'.....

For example, the Novice call would be KN0ABC and their Tech call would
be K0ABC. (Same suffix, different prefix)

If they upgraded to General (or Conditional) they kept the K0ABC call
and the "KN" Novice call lapsed.

Similarly, if they didn't upgrade, the Novice call expired after 1 year
(non-renewable) and the K0ABC Tech call survived.

12 db gain over what? A bent coathanger? If the db claim isn't compared
to some standard then the db gain claimed means absolutely nothing.

extremely unusual for a quarter-wave antenna.

I would say not even realistic.

A grad student a while back designed a high-gain quarter-wave antenna as part of her doctoral thesis. She used a Dodge Quad cab 1500 pick up and found out when her specially designed quarter-wave antenna was mounted at exactly one half the length of the perpendicular axis between the truck's windshield and rear window, it resulted in an antenna yielding 12 d.b. gain, extremely unusual for a quarter-wave antenna. The unusually high gain was limited to approximately the 26.000 to 30.000 mHz frequency range, due to the physical characteristics of the Dodge truck used in her experiments. Her studies were published in a scientific journal. She offered to publish her studies for free in QST, but the ARRL declined her offer, saying very little of their readership owned Dodge trucks. Rumors leaked out that the true reason her article was declined was because the accompanying pictures in her article would offend the white male readership of QST. The author was a young African-American woman. Additionally, she based some of her studies on a CB antenna, which would further incense the QST readership. In reality, the dumb downed technical expertise found in today's ham radio community would fail to grasp the scientific principles of here experiments anyway. So it was no big loss.

>You are using faulty logic and certainly misrepresenting what Riley
>told myself and others.

Actually, I believe you are trolling.

The 10 meter band is an international allocation, meaning it is allocated
EXCLUSIVELY to Amateur Radio in all three regions. CBers, taxiis, truckers,
etc have no business being there.

Period.

> Two wrongs NEVER make a right.

Actually the saying is "Two Wong's Can't Make a White".

And in mathematics, two negatives DO make a positive.

As far as 10 meters goes, you are in error.

>One thing old timers respect and is never mentioned today is the "spirit"
>of ham radio. Deliberately hunting down what someone perceives
>to be an illegal operation should always be left to the professionals,
>especially if you plan to deliberately interfere with said operation.

SSB operations at 28.120Mhz discussing where to pick up the next load or
where one perceives a school of fish to be lurking is NOT Amateur operations.
Not in this or any other country.

>You could be wrong.

Not likely.

If it's preceeded with the words "MAYDAY, MAYDAY, MAYDAY", I don't care if
it's from Red China or North Korea, I will answer it and do my best to help.

Otherwise it doesn't belong.

>It is shocking how the character of ham
>radio operators has radically changed in the last two decades but
>not surprising when one views hams not only as hams but members of
>American society. For a ham to state he/she intends to deliberately
>cause interference was unheard of two or three decades ago.

The "character" of Ham Radio is such that we're tired of "I bought this radio and I'll danged well use it wherever I want" "freebanders".

If it's not an Amateur Radio transmission, identified with a callsign identifiable to a nation of origin and then in itself verifiable, it's "bogus".

Nice try at trying to justify your own bootleg operations, which is what I perceive this as an attempt to do.

>Today it seems to cause no alarm in the amateur community. Character
>meant something years ago in ham radio. Today, one might ask,
>"what character" and make the point precisely. Oh BTW, the U.S.
>military is quite legal if they so chose to use the 10m ham band, and
>they are definitely not hams. Do you want to take the risk of
>deliberately jamming U.S. military communications? I think not.
>I had this very discussion with Riley not too long ago, and he
>agreed with my premise.

Amateurs can differentiate between military traffic and CB traffic...it isn't rocket science.

Your "premise" of a conversation with Mr Hollingsworth is comical, though.

And military communicators are taught where they can operate with the least amount of interference and what to expect there. They know where Amateurs are, and they certainly know where CB is. Unless it is to establish liasion with civilian authorities, you will not find US military units operating inside Amateur allocations.

>Thank you for your support of ham radio.

And YOUR callsign would be...?!?!

>Constitution of the United States.

The Constitution gurantees those rights for citizens from interference
from the government.

It was never meant to prevent one entity from stopping another from doing
soemthing it thought was injurous.

That they are doing it via the courts and in public, (as opposed to hiring
some pencil necked geek from crashing it for you...) is completely legal and
within thier rights to do so.

I have not read your site and don't know what it's content is, however I
know most companies don't go after people like that unless someone really
oversteps those bounds of "freedom of speech". How many times do you think you
can slap the bull before he charges?

>RadioShack is on a vicious witch hunt and will not stop until they dominate
>our lives. RadioShack must be stopped now, before it gets any later or any
>worse.

Let's see....

You, or people you know, have created a website called "radioshacksucks",
and then YOU are claiming Radio Shack is on a witch hunt becasue they are
seeking to stop you from doing so within the bounds of the law...?!?!

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

If you had put YOUR name and the names of those arguing against this act,
I might have had some respect for your endeavours, but it's another nameless,
anonymous post making even more outrageous claims.

Booooohooooo.

True, but t's not necessarily a disadvantage. Some folk around here
use 2M SSB for a filter.

I've never tried it but now that I have one of those puppies which
does all the tricks I'm looking forward to giving vhf CW and SSB a
whirl. I have a buddy who had 38 states confirmed on 2M without using
EME or burst modes back in the '70s - with Clegg tube gear and one
HyGain Long John @ 50 feet.

> > I'm also noticing a drop in 2M repeater use. Dunno what that's all

> nets, activity is spotty.

Something is up . . The machines are dying. There were recent
suggestions made to do away with the FRC machine based on it's ongoing
operating costs which generated a pretty lively food fight in the
reflector a few months ago. The machine won. So far.

> So there's a soft spot for the PVRC gang?

Definitely. Goes back decades. It's "us" against the Beasts of the North. Over the years there have been PVRC/FRC get-together banquets, picnics, equipment, tech info and antennas get swapped north & south, etc. I bought my TS-940 from a PVRCer who responded to my packet WTB ad. This coming weekend there's a joint YCCC/FRC picnic in NY. It's all one big ball of wax. Until zero UTC four Fridays a year when the mauls and harpoons rule the bands.

> I use spot filtering to avoid seeing everything.

These packet overloads come *after* filtering . . we'ere piled on top of each other geographically . . it's just too much local traffic for 1200 baud to handle. 'Specially when some of 'em get packet-chatty when the bands get hot.

> I'm not doing any
> telnet work but am checking the OH-land DX Summit via internet

Is there any way I can help out, maybe with a donation of cash?

Should the money go to a particular store, or to the corporate headquarters?
I'm always ready to donate to a good cause.

Great story!

The FCC *officially* phased out schematic drawing in the amateur exams up to at
least General about 1960. I say "officially" because what they did was to stop
printing the old exams and start printing new ones, but they used up the old
stockpile before starting to use the new exams. So in some areas the transition

happened quickly and in others it took years. There weren't many Extras in 1965 - maybe 4000 out of about 250,000 US hams were Extras back then.

In 1967 the 'old' Extra exam was split into the 'new' Advanced and Extra exams. That forced the use of new-style exams if there were any of the old ones left.

FCC employees sold copies of exams in some parts of the country.
The FCC was aware this was going on but chose to sweep this
embarrassing fact under the carpet, rather than deal with it. No
surprise, as this is standard procedure in all federal bureaucratic
agencies, when something can cast the agency in a negative light.

"...you'll feel a slight pressure"

Saddam needs a urologist:

http://www.cnn.com/2004/WORLD/meast/07/29/saddam.ap/index.html

"Deposed Iraqi dictator Saddam Hussein suffers from a chronic prostate
infection and has refused to have a biopsy to rule out any chance he has
cancer, an Iraqi official said in an interview Thursday on Al-Jazeera
television."

--------- cut -------

Uhhhh, gee ... why would Saddam possibly object to a prostate biopsy if
he's having problems? Wouldn't *you* want a prostate exam from a
coalition forces doctor? Hey, I wonder if Lynndie England is available
with her big industrial rubber gloves?

I might add the section on separate reciver/transmitter being better
than a transceiver was a little odd, but this is a first rate article.

So often when we know something about a subject, a newspaper article
shows a gazillion mistakes, but not this one!

You haven't been looking long enough. I've had at least one letter and
article published in QST. And elsewhere.

btw, QST doesn't publish every letter they get. And to change ARRL
policy, it makes more sense to write to one's director and vice

director (who make said policy) rather than the mag editor, who
doesn't.

> >> Why would they do that, if there was the slightest possibility that it

> Access is the problem, not the backbone networks.

Not a problem. Use the fiber to get to within Wi-Fi range of the
customers, RF does the rest. You watch - that will be the ultimate
answer in many areas. Hopefully.

> >> >3) The costs and headaches of filtering, answering complaints, etc.,

> Example?

See FCC enforcement letters for July 24 on ARRL website. One power
company gave a ham a load of stuff about installing guy wire
insulators on *his* tower, and a ground mat, to reduce powerline
noise. FCC (or at least Mr. Hollingsworth) ain't buying it. I think
the exact phrase used was "without technical merit"...

btw, the Penn Yan, NY BPL system is "moving to other technologies".
IOW it's getting out of the BPL game.

> >> >4) Possible personnel changes at the Federal level...

Amateur Radio Newsline™ Report 1407 July 30, 2004

Amateur Radio Newsline report number 1407 with a release date of Friday, July 30, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ham bands get clobbered by the sun and some of the results are amazing. Find out the details on Amateur Radio Newsline report number 1407 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: GEOMAGNETIC STORM AND HAM RADIO

A huge geomagnetic storm has hit the Earth, wiping out a lot of High Frequency communications. At the same time its making the VHF and UHF bands a veritable D-X playground. Bill Pasternak, WA6ITF, has more:

--

According to a propagation bulletin issued on July 25th by CQ Magazine's Tomas Hood, NW7US, the estimated planetary K index reached a level of 8, with the Bolder, Colorado K reading a level 7. Translated into everyday talk, that's one heck of a solar storm and it does odd things to radio communications. All you need do is turn on a 6 or 2 meter CW or SSB radio to hear it for yourself.

Solar storms bring with them an increase in Aurora and Aurora based communications. Reports over the VHF Reflector say that this one was no exception. According to Dave Wenner, K3KEL, in Benton, Pennsylvania, his 150 watts to a homebrew 9 element Quagi antenna made it possible for him to make dozens of 144 Mhz contacts. These ranged from Maine across to Missouri plus Nova Scotia, Quebec, and Ontario Canada. Dave's posting said that he did not work any stations to the South but that they were there. He says that he heard K4QI in North Carolina's grid FM06 very strong toward the end of the session.

Wenner's was typical of the reports posted to the VHF Reflector. Many of them said that this was the best Aurora session heard in years.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

How long does a solar storm like this last? NW7US reports that as Saturday, July 25th progressed, the geomagnetic field again became highly active and reached storm levels. He says that it has continued to get more intense, reaching very high storm levels. As the week progressed more Aurora contacts were reported world -wide with some on the 222 Mhz band and above. (NW7US via VHF Reflector)

**

PROPAGATION: IS THE SUN HARMING EARTH

Meantime the CGC Communicator cites an interesting propagation report. One that says Greenland's ice cores indicate that the sun is more active now than it has been at anytime in the past 1,000 years.

That report also says this has caused a warming trend here on Earth. As a result of this and other solar observations the pseudo-science doomsayers have been quick to jump on the gloom and doom bandwagon. They are out there predicting dyer consequences for those of us living here on the surface of our home planet Earth. But is any of this based on reality? That's what RAIN's Hap Holly asked CQ's Thomas Hood, NW7US:

--

Audio report only. Hear it in the MP3 version of this newscast downloadable at http://www.arnewsline.org/quincy

--

Hood says that you should enjoy the radio talk about the phenomena but not to take it seriously. (CGC, RAIN)

**

ON THE AIR: THOMAS HOOD ON RAIN

By the way, you can learn a lot more about radio propagation and the effects of solar radiation on communications from Thomas Hood on this weeks RAIN Report. Its available right now on-line at www.rainreport.com or on the phone at 847-827-7246. You can read the article referred to by the CGC Communicator at http://news.bbc.co.uk/2/hi/science/nature/3869753.stm (CGC, RAIN)

**

VHF AND ABOVE: ARRL MULLS CVHF/UHF CONTEST RULES CHANGES

ARRL Director Tom Frenaye, K1KI, has also posted some interesting information to the VHF Reflector. He says that says that the work done by the VHF-UHF Contests/Awards Subcommittee has been completed. That the written report and along with some in-person additional comments were given during the ARRL Board's Program & Services Committee meeting on July 15th. That's just before the ARRL Board meeting that began on July 16th.

Frenaye says that the Program & Services Committee did not take action on the report and will study it during the next several weeks. In the mean time, the committee agreed with him that the report should be posted to the VHF reflector public consumption. It will also be sent to the Contest Advisory Committee for information and possible comment.

What will happen from here? Frenaye says that the Program & Services Committee will work with the Membership Services Department in Newington to take the recommendations any further. He says that some rules may changes and some may not. Except for possible changes to the 2004 E-M-E contest, K1KI does not believe you'll see any major contest VHF changes until 2005. He also notes that some recommendations may have to wait until budget resources are made available. The full ARRL Board does not normally get directly involved in contest rules issues as contest rules are usually not policy matters. (K1KI via the VHF Reflector)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the K8KZO repeater serving Portage Michigan.

(5 sec pause here)

**

HAM RADIO IN SPACE: ECHO ON THE AIR

I'm Bruce Tennant, K6PZW, with some breaking news that hams worldwide have been waiting to hear. This, as AMSAT announces that its new Echo satellite, now renamed AO-51 will be turned on for general use in FM repeat mode on July 30th at about 02:15 UTC.

Echo will be on for a trial period of about three weeks. During that time command stations will be watching the power budget and adjusting the UHF transmitter output as needed for management of the battery supply. Initially, the transmitter will be running at about 1 watt but if all goes well it will be slowly increased during the trial period.

Echo's uplink is 145.920 MHz using FM voice with 67 Hz PL tone (CTCSS) required. The downlink is on 435.300 Mhz, also FM voice. And like many terrestrial repeaters the downlink transmitter will only come on when it hears an uplink signal with a 67 Hz PL tone for about 1 second. After the uplink signals drop away the downlink transmitter stays on for 10 seconds. After that, the downlink signal goes away. You might say that the operation is just like a terrestrial FM repeater with a 1 second kerchunk filter and a 10 second hang time. The only difference is that this one is circleing the Earth in space.

Norm. (AMSAT)

**

RESCUE RADIO: UK FIRE EVACUATION BRINGS OUT HAM RADIO

RAYNET, the United Kingdoms version of RACES was recently called out during a very hazardous materials fire. Jeramy Boot, G4NJH, has the details:

--

On Monday the 5th of July at 19.55 BST Lancashire Emergency Planning called-out Rossendale Raynet to attend a Rest Centre in Colne. A fire at a building that contained an acetylene cylinder meant that local residents had to be evacuated.

About 40 people went to the Rest Centre but the majority were able to find accommodation for the night with friends or relatives. Social Services arranged accommodation for the remainder. Rossendale Raynet was stood down at 22.08 when the Rest Centre closed for the night.

Im G4NJH in Nottingham.

--

There were no injuries reported and the ham radio system worked flawlessly. (GB2RS)

**

ENFORCEMENT: FCC INVESTIGATING 1999 EXAM SESSIONS

The FCC has ordered thirty-seven hams to sit for retests. This, as part of an ongoing investigation of ham radio examination sessions held in Yucaipa, California, back in 1999.

The tests under government scrutiny were administered by a W5YI exam team. The exact test dates involved are those held on February 27th, March 27th, April 24th, May 22nd, June 26th, and July 31st of 1999.

This is one of the largest retest orders issued since the all volunteer testing program got underway in the early 1980's. (FCC)

**

ENFORCEMENT: HAM SURRENDERS LICENSE

A now former ham involved in a licensing investigation has turned in his ticket to the FCC. The Agency's Daryl Duckworth, NN0W, explains:

--

Frank C. Richards of Moers, New York, submitted his license KG2IJ for cancellation. In November of 1995 he had requested that the call sign KB4VU be changed to the next availlable and that the address be changed to Plattsburg, New York.

--

The FCC says that the call KB4VU actually belongs to one Frank C. Richards of Ft,. Meyers, Florida. It says that this Richards has never lived in New York and never requested that his callsign or address be changed.

After an investigation that lasted almost five months the New York Richards surrendered his ticket to the FCC on June 23rd. The FCC acknowledged receipt on July 6th noting that the Wireless Telecommunications Bureau has canceled that license and no further enforcement action is contemplated at this time. (FCC, RAIN)

**

ENFORCEMENT: $11,000 FINE AFFIRMED AGAINST CALIFORNIA HAM

The FCC has affirmed an $11,000 fine issued to a California ham. One whom the agency says caused deliberate interference to repeaters and then refused to accept several certified letters from the Commission.

The target of the now affirmed fine is Daniel Granda, KA6VHC, of Whittier California. As previously reported, back on March 31st the District Director of the Commission's Los Angeles Field Office issued a Notice of Apparent Liability for Forfeiture alleging that Granda deliberately interfered with two different repeaters. It said that when FCC notices were sent by Certified Mail, they were returned as unclaimed. But the FCC says that copies sent by regular first-class mail were not returned by the post office.

The fine is $7,000 for the alleged interference and $4,000 for not responding to FCC notices. Granda was given the usual 30 days to pay or to file an appeal. (FCC)

**

HAMVENTION: ARRL NATIONAL AND HAMVENTION COMBINE FOR 2005

Turning to the ham radio social scene, word that the ARRL has accepted an invitation from planners of Hamvention 2005 to bring the society's national convention back to Dayton.

According to General Chairman Gary Des Combes, N8EMO, ARRL Great Lakes Director Jim Weaver, K8JE, called shortly after the recent Board of Director's meeting. Weaver told Des Combes the League had accepted the invitation to hold the next ARRL National Convention at the 2005 Dayton Hamvention.

The combined show will take place next May 20th to the 22nd at its longtime home. That of coarse is the Hara Arena in suburban Dayton. (Hamvention©)

**

CONVENTIONS: K7UGA ON THE AIR FROM ARRL SW DIV CON

And the call sign of the late Barry M. Goldwater will soon be heard again. This, as special events station K7UGA takes to the air from the Southwestern Division Convention in Phoenix, Arizona from August 27th to the 29th.

This will not only be a chance for convention attendees to operate Goldwater's original Collins S-Line equipment but also to take part in an oral history project about Senator Goldwater that will begin recording at the show. Also, Goldwater impersonator Ben Tyler will attend the convention on Saturday afternoon to present his Goldwater "Autobiography".

Again. it all takes place August 27th to the 29th in Phoenix, Arizona. We will see you there. (SW Division Communicator)

ARNEWSLINE™ SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, once again here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

Continuing with our thank-you for June, we heard from Tim, N9TO and Carol Toman, WD9CNW of Westmont, IL; Ted Tsucalas, W0RMJ of Littleton, CO; Turning to CA, Leo Halog, KR6EG of San Francisco; Doug Cannon of Livermore; Monthly contributor William Walters, WA2IBM, of San Jose; monthly contributor Scott Hensley of the Area Communications Team, also in San Jose; Art Protas, KG6AY of West Covina; John Rice, KE6YFV of San Pedro and the Rio Hondo ARC of Whittier.

Thank you to everyone, and we promise to do our best to continue to earn your care and support.

A reminder that Newsline is a 501(c)(3) and California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. (ARNewsline™ Support Fund)

**

CHANGING OF THE GUARD: JOHN KRAUS, W8JK - SK

Some sad news to report. Word that noted astronomer and antenna designer John Kraus, W8JK, has become a Silent Key. According to reports from the ARRL and CQ Magazine, Kraus died on July 18 at age 94.

John Krasus was a member of the inaugural "class" of the CQ Amateur Radio Hall of Fame, a world-renowned radio astronomer and the father of the "Big Ear" radio telescope at Ohio State University. In the world of Amateur Radio he was perhaps best known as an antenna designer. His designs include the famous W8JK bi-directional wire beam as well as the helix and corner reflector antennas often used at UHF frequencies. (ARRL, CQ)

**

KAHN STILL TRYING TO TEST CAM-D

Broadcast entrepreneur Leonard Kahn opposes the AM HD Radio IBOC system and has long promoted his Cam-D system as an alternative. In his latest filing with the FCC for the IBOC proceeding, Kahn reveals he tested his Cam-D system on Nebraska's 50 kilowatt KRVN at 880 kHz. However, he told Radio World Online that, some employees found the sound unacceptable and the tests were discontinued. For more on this story, see http://www.rwonline.com/dailynews/one.php?id=5511 (CGC)

**

HAM RADIO IN SPACE: NEW KENWOOD ISS RADIO PROVES OUT FINE

The Amateur Radio on the International Space Station USA team has successfully completed a comprehensive checkout pass of the new Kenwood D700 radio system with Astronaut Mike Finke, KE5AIT. Utilizing ground stations in Greenbelt, Maryland, Orlando, Florida and Houston, Texas and linking team members in Kansas, Colorado, Maryland, Florida and Texas, the ARISS USA team performed voice and packet radio uplink tests to fully validate the Kenwood D700 system for future school group operations.

During the East Coast pass, the ARISS team were able to perform signal strength measurements and voice quality checks on 2 meters and 70 centimeters using the Kenwood D700 radio and the ARISS-built W A One antenna system. Mike Finke provided the on-board feedback to the team to help them understand how the
radio sounds on-orbit. Finke said that the signals from the 70 centimeter uplink signals were especially loud. (ARISS)

**

WORLDBEAT - CANADA: RESTRUCTURING ON ITS WAY

Back on Earth, Canada appears ready to restructure its Amateur Radio service and work is well underway.

Following extensive discussions with Industry Canada, on July 23rd, Radio Amateurs of Canada formally submitted its Proposal on Morse Code and Related Matters to that regulatory agency. According to an Radio Amateurs of Canada press release, little changed from the draft proposal that was posted on the society's web site back in 2003.

Radio Amateurs of Canada says that it is now up to Industry Canada to respond to the proposal. The current version is on line in both English and French at www.rac.ca (RAC)

**

WORLDBEAT - MEXICO: ALL N.A. ADOPTS U.S. HDTV STANDARD

Mexico has formally adopted the U.S. ATSC Digital Television Standard based on 8 VSB technology. This, for terrestrial broadcasting in that nation.

Canada adopted the same standard in 1997. The decision by Mexico to go along with the U-S and Canada means that ATSC is now the North American Digital Television standard. ATSC was also adopted by South Korea in November of 1997 and Argentina in October of 1998. More is on the web at http://www.atsc.org/news_information/press/2004/PR_Mexico_7-7-4.pdf (CGC)

**

DX

In D-X, word that husband and wife team EA3BT and EA3WL will be active from the Gambia through the 4th of August. They plan to operate as C56BT and C56WL on 40 to 6 meters SSB. QSL as directed on the air.

And Steve Burrows, M5BXB, will be on from the Czech republic as OK8XB until the 6th of August. The OK8 prefix is quite rare, and Steve will be attempting to make at least 1,000 QSOs on the HF, 6 meters and on 2 meter's from a portable location on Lysa Hora. Thats site is 1,324 metres above sea level in grid square JN99FN.

**

THAT FINAL ITEM: THE PHYSICS OF M&M'S

And finally this week the story of how a researcher with a sweet tooth has changed science. Amateur Radio Newsline Henry Feinberg, K2SSQ, has the rest of the story:

--

Princeton physicist Paul Chaikin's passion for M&M candies was so well known that his students played a sweet practical joke on him. The left a 55 gallon drum of the candies in his office. Little did they know that their prank would lead to a physics breakthrough.

The journal Science says that the barrel full of the oblate little candies made Chaikin think about how well they packed in. A series of studies have shown they pack more tightly than perfect spheres. This is something that surprises many physicists and Chaikin himself. So Chaikin and his colleague, chemist Salvatore Torquato, used the candies to investigate the physical and mathematical principles involved when particles are poured randomly into a vessel.

The report in Science says they found that oblate spheroids like plain M&Ms pack surprisingly more densely than regular spheres when poured randomly and shaken. That spheres occupy about 64 percent of the space in a container. M&Ms manage to pack in at a density of about 68 percent.

But one of the researchers had a more philosophical view of the experiment. Salvatore Torquato said that to him it is remarkable that you an take this simple system with common candies and probe one of the deepest problems in condensed matter physics.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, not to far from Princeton, New Jersey.

--

According to news reports, Mars Inc., which makes M&Ms, did not help sponsor the research although it donated 125 pounds of M&Ms to the two scientists. (Journal of Science, Science Online)

Why don't you just turn in that ol' license. It must be terrible having
to deal with us lowly nickel extras, eh? Someone might mistake you for
one of us! 8^)

> Heard an extra class on a repeater the other day using "10-4" and "what
> is your personal?" Too funny!

Yeah, I've heard the same thing. Amazing enough, the guy had been an
extra since the days when "real hams" took "real tests".

And is typing "hi" any less a faux pas than saying 10-4 on a repeater?

On the commercial side, you got the guy

>
>Not really. Just that "10-4" kinda grindles me, because the next thing out
>of his mouth is probably going to be "good buddy".

Or "...the 20 here is..."

"I've got 5 on keydown but she swings 20...."

"....but I can't hear you as well on the flat side..."

"....rah-gaa-dee cum baaaaack......"

"....neg-a-toriee..."

"...TENenenen Fouourourour Onononon thatatatata goodododododod
buddydydydydydy..."

(hard to simulate the echo box in writing, but you get the idea........)

ad nauseum

The faux pas is NOT realizing that "hi" works in Morse Code because of
how it sounds, and it's more appropriate to do so on the air. "Ha ha" can be
done here quite practically, and otherwise makes persons who use "Hi hi" on a
keyboard look pretty foolish when they do it.

One peson in particular comes to mind, but he does a good job of making
himself look foolish without the "hi hi" as it is. Being untruthful and
deceitful does that for a person.

I made extra in 1963. My certificate number (FCC Form 659) is
AE-21-12E. My home was on Guam at the time so that put me in District
21 (Honolulu), hence the "21" , and I assume the "12" means I was the
twelfth Extra in that district?

Hello, Steve

Most likely it wasn't being swept under the carpet.

The information is missing - along with 15 minutes of Richard Nixon's tapes.

Oh, and Bush's military service record. Oh, they found that, didn't they?
Perhaps it has been checked over by the folks who checked the hanging chads in Florida :))

Around here, the state refuses to raise the maximum income tax, currently a bit over 7% (and folks making little money will be paying around 7% off the top). They *are* considering raising sales tax. Currently, in Rochester, we are at 8 1/4% sales tax. Right now, more is witheld from my little pension for state income tax than federal income tax. I'm seriously considering moving to Florida.

Given the Republican propensity of give-aways for the "right" people, I suspect that BPL will be with us shortly. They can blame the Democrats for assigning low band VHF to any emergency services. The hams? Who needs 'em?

Sigh ....

Translation: "That !@#$%^& is really making it hard to run
illegal CB radio in this country...Why doesn't he leave us
alone...?!?!"

Take a hint, ya PUTZ...."freebanding" is illegal. Period.
Against the law. Forbidden. It's not a joke...It's not "just a little
wrong", and YES it DOES "hurt" somebody!

It wasn't me that wrote the original post, Charles, but I
agree...I am half tempted to write RS a check and tell them to use it
agaist these creeps.

FYI: I went ahead and stuck thier URL in to see what thier beef
is, and obviously the law has the same opinion about them I do...They
have some whiney "caveat" about thier legal problems and how our
freedoms are being infringed upon because they think it's OK to be
insulting and foul-mouthed.

Some in THIS forum should take heed.

Ask W4NTI how long he's been fighting a similar battle.

> I hope they get 'em good.
>
Me too.

The really odd thing is that the utility hired a consultant to find the
problem, and said consultant found a whole bunch of problems for the utility to
fix. But they didn't.

Sounds reasonable to me. With less than 4000 Extras and, say, 25 districts,
that works out to ~150 per district. And Guam was hardly the most populous
district at the time.

Mike, absolutely. People say all sorts of silly and even stupid
things but to go after the ones who actually use some kind of
"ham-speak" is kind of silly in itself. I've heard "Hi, hi" used on
repeaters since before the invention of no-code Techs, so it is "Old
Fart" blessed.

Hi, hi.

Meanwhile, "Sorry Hans, MARS...." gets the pass. Good grief.

>some usage. The satellite, especially on intercontinental hops.

Of course - but isn't fiber becoming the most common media? I understand that
all of the major transocean routes have been linked by undersea fiber, just as
they were linked by undersea coaxial cable 40+ years ago.
>
>> Except for the local hookup to your home or
>> business, and some legacy and special purpose installations, most
>> "electronic" communication today goes most of the way by optical

>
>And fiber to the home is already trialed and may be deployed in
>some local areas.

I think that will be the ultimate solution. Your own "personal fiber" - brings
in (and out) voice, TV, data, and whatever other services you want. The biggest
hurdles are probably regulatory and "last mile" installations.

>> And in its most basic implementation, fiber optics uses a simple but

>
>This is very common today. In the light spectrum, you'll also here
>the use of different wavelengths as different colors.

Of course - if we could *see* at radio wavelengths, we might call the various
bands by 'color'.

One can wonder if elsewhere in the universe there are life forms who can sense
electromagnetic energy at wavelengths very different from ours.

>This combined use
>of TDM (Time div mux) and FDM (frequency or color div mux)
>results in an overall bit rate of 1.6 Terrabits/sec in a single
>fiber...with stil higher speeds being developed/tested.

If my math is correct, that's more data than you could send through the
entire radio spectrum from a few Hz to 300 GHz...

What I find most interesting is that fiber optics isn't "electrical" or
"electronic" at all. Immune to RFI/EMI, ground loops, etc. Incredible bandwidth
and speed, at an affordable price.

>> But the basic fiber optic communications mode is on-off keying.

>> How about that! The more things change...

>True to a point, but the "on-off keying is pure binary (ones and zeros)

>a USA standard. Much of the rest of the world uses an E1 standard
>which is 2.004Mb with 32 64Kb channels.

Yep - no "dahs"!

The old DC transocean telegraph cables used pulses of a single length, too.
Polarity told whether it was a 'dit' or a 'dah'. Of course there's no reason to
do it that way for light.

>Here endeth your telcom lesson for today.

Yea, verily!

Thanks, Bill.

>
Well, it turns out that our Sun (a fairly common G2V star) has
peak light output at yellow light wavelengths. That, coupled
by the fact that water is transparent at those wavelengths pretty
much determine what wavelengths of light our eyes see.

>
>>This combined use
>>of TDM (Time div mux) and FDM (frequency or color div mux)
>>results in an overall bit rate of 1.6 Terrabits/sec in a single
>>fiber...with stil higher speeds being developed/tested.

A big limit on the bandwidth of a fibre optic is the amount of
different bounce paths the light from the source can take to
get to the destination. That makes for a time spread of an
impulse. Thus limiting the speed of on off keying.

>>I'm Bruce Tennant, K6PZW, with some breaking news that hams worldwide
>>have been waiting to hear. This, as AMSAT announces that its new
>>Echo satellite, now renamed AO-51 will be turned on for general use
>>in FM repeat mode on July 30th at about 02:15 UTC.
>>
>>
>>Echo will be on for a trial period of about three weeks. During that
>>time command stations will be watching the power budget and adjusting
>>the UHF transmitter output as needed for management of the battery
>>supply. Initially, the transmitter will be running at about 1 watt
>>but if all goes well it will be slowly increased during the trial
>>period.
>>

>>
>>Echo's uplink is 145.920 MHz using FM voice with 67 Hz PL tone
>>(CTCSS) required. The downlink is on 435.300 Mhz, also FM voice.
>>And like many terrestrial repeaters the downlink transmitter will
>>only come on when it hears an uplink signal with a 67 Hz PL tone for
>>about 1 second. After the uplink signals drop away the downlink
>>transmitter stays on for 10 seconds. After that, the downlink
>>signal goes away. You might say that the operation is just like a
>>terrestrial FM repeater with a 1 second kerchunk filter and a 10
>>second hang time. The only difference is that this one is circleing
>>the Earth in space.
>>
>>
>>Norm. (AMSAT)

>>
>>
>>ENFORCEMENT: FCC INVESTIGATING 1999 EXAM SESSIONS
>>
>>
>>The FCC has ordered thirty-seven hams to sit for retests. This, as
>>part of an ongoing investigation of ham radio examination sessions
>>held in Yucaipa, California, back in 1999.
>>
>>
>>The tests under government scrutiny were administered by a W5YI exam
>>team. The exact test dates involved are those held on February 27th,
>>March 27th, April 24th, May 22nd, June 26th, and July 31st of 1999.
>>
>>
>>This is one of the largest retest orders issued since the all
>>volunteer testing program got underway in the early 1980's. (FCC)
>>
>>
>>**
>>
>>
>>ENFORCEMENT: HAM SURRENDERS LICENSE
>>
>>
>>A now former ham involved in a licensing investigation has turned in
>>his ticket to the FCC. The Agency's Daryl Duckworth, NN0W, explains:
>>
>>
>>--
>>
>>
>>Frank C. Richards of Moers, New York, submitted his license KG2IJ for
>>cancellation. In November of 1995 he had requested that the call
>>sign KB4VU be changed to the next availlable and that the address be
>>changed to Plattsburg, New York.
>>
>>
>>--
>>
>>
>>The FCC says that the call KB4VU actually belongs to one Frank C.
>>Richards of Ft,. Meyers, Florida. It says that this Richards has
>>never lived in New York and never requested that his callsign or
>>address be changed.
>>
>>

>>After an investigation that lasted almost five months the New York
>>Richards surrendered his ticket to the FCC on June 23rd. The FCC
>>acknowledged receipt on July 6th noting that the Wireless
>>Telecommunications Bureau has canceled that license and no further
>>enforcement action is contemplated at this time. (FCC, RAIN)
>>
>>
>>**
>>
>>
>>ENFORCEMENT: $11,000 FINE AFFIRMED AGAINST CALIFORNIA HAM
>>
>>
>>The FCC has affirmed an $11,000 fine issued to a California ham.
>>One whom the agency says caused deliberate interference to repeaters
>>and then refused to accept several certified letters from the
>>Commission.
>>
>>
>>The target of the now affirmed fine is Daniel Granda, KA6VHC, of
>>Whittier California. As previously reported, back on March 31st the
>>District Director of the Commission's Los Angeles Field Office issued
>>a Notice of Apparent Liability for Forfeiture alleging that Granda
>>deliberately interfered with two different repeaters. It said that
>>when FCC notices were sent by Certified Mail, they were returned as
>>unclaimed. But the FCC says that copies sent by regular first-class
>>mail were not returned by the post office.
>>
>>
>>The fine is $7,000 for the alleged interference and $4,000 for not
>>responding to FCC notices. Granda was given the usual 30 days to pay
>>or to file an appeal. (FCC)

>>
>>
>>THAT FINAL ITEM: THE PHYSICS OF M&M'S
>>
>>
>>And finally this week the story of how a researcher with a sweet
>>tooth has changed science. Amateur Radio Newsline Henry Feinberg,
>>K2SSQ, has the rest of the story:
>>
>>
>>--
>>
>>
>>Princeton physicist Paul Chaikin's passion for M&M candies was so
>>well known that his students played a sweet practical joke on him.
>>The left a 55 gallon drum of the candies in his office. Little did
>>they know that their prank would lead to a physics breakthrough.
>>
>>The journal Science says that the barrel full of the oblate little
>>candies made Chaikin think about how well they packed in. A series
>>of studies have shown they pack more tightly than perfect spheres.
>>This is something that surprises many physicists and Chaikin
>>himself. So Chaikin and his colleague, chemist Salvatore Torquato,
>>used the candies to investigate the physical and mathematical
>>principles involved when particles are poured randomly into a vessel.
>>
>>The report in Science says they found that oblate spheroids like
>>plain M&Ms pack surprisingly more densely than regular spheres when
>>poured randomly and shaken. That spheres occupy about 64 percent of
>>the space in a container. M&Ms manage to pack in at a density of
>>about 68 percent.
>>
>>
>>But one of the researchers had a more philosophical view of the
>>experiment. Salvatore Torquato said that to him it is remarkable
>>that you an take this simple system with common candies and probe one

>>of the deepest problems in condensed matter physics.
>>
>>
>>For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, not to far
>>from Princeton, New Jersey.
>>
>>
>>--
>>
>>According to news reports, Mars Inc., which makes M&Ms, did not help
>>sponsor the research although it donated 125 pounds of M&Ms to the
>>two scientists. (Journal of Science, Science Online)
>>

Riley does what is convenient for Riley, what will protect his bureaucratic position, and what will ensure a position for him with a private employer after he retires from his bureaucratic FCC job. Riley will do nothing which might give him a bad reputation with potential employers, after he retires from his present bureaucratic position. Summary: Riley is a typical federal bureaucrat, no more no less.

The fact that they threaten enforcement is at least a step in the right direction.
>
I think one of the turning points in that case was that a consultant told the power company of a bunch of things they needed to correct - yet the power company told the ham to do things that were of "no technical merit".

(Insert standard "no connection except I read it" disclaimer HERE)

There's a good book out called "AC Power Interference Handbook (2nd Edition)" by Marv Loftness, KB7KK. ISBN 0-9653760-3-6 Available through ARRL but it's not really an ARRL book (it's published by Percival Technology, PO Box 4172, Tumwater, WA 98501

Kinda like those who who type "hi hi", rather than "ha ha" when trying to express laughter in a written forum.

Pretty silly, actually, especially when you realize that coded Amateurs use "hi" for "laughter" for the way it sounds, not how it looks. Of course many here post in this forum not for what thier posts "sound" like, but basically just to see themselves in writing.

Espeically those who post anonymously or won't sign thier name or callsign to thier posts. Cowards, actually.

This is, unfortunately, a fairly common situation - I ran into it a
year and a half ago as well. Guess I was lucky - it took only 14
months to get it resolved! Some effort, was made on a few occasions
to correct it, yes - but results took a long time. Just convincing
them that it is a problem with their equipment is no fun.

I think that this will be one of major headaches if they do get a
foothold with BPL - there simply isn't the motivation on their part to
spend the time and money to resolve issues like this right now, let
alone when the complaints multiply tenfold, or a hundredfold......

And for every one of these issues that goes as far as the enforcement
stage, how many are still dragging on out there? Plenty, I'll bet!

> "Mikey"?

Yeah Mikey. Michael. As in Powell. Mikey was the little blonde boy who
starred in a series of TV commercials a few years back. 'Bout the same
time the little old lady was hollering all over the channels "Where's
the BEEF?"

Mikey Powell is backing the wrong technology. Politicians who back
losing horses wind up with eggs in their faces. Wi-Fi is already here
and galloping past anything BPL can do and then some. Mikey neeeds to
back away from his BPL jihad or risk suffereing some consequences.

From the ARRL Letter for more in the same vein:

". . ARRL also has learned that Energy East--a cooperative of New York
State
Electric & Gas and Rochester Gas & Electric--decided against deploying
BPL
in their Western New York service area. Energy East based its decision
in
large part on the high levels of radio frequency interference an
engineer
and company officials observed during a visit to the Penn Yan field
trial.

On July 29, Grand Haven, Michigan, announced that it had become the
first
community in the US to deploy a WiFi network
<<http://www.ottawawireless.net/about-us/press-room.html>> that
blankets the
city and up to 15 miles off shore in Lake Michigan with broadband
Internet

access."

Eric just got back from another week all over the Interstates and he plugs into the Internet at every truck stop he overnights in via Wi-Fi.

And there's a new rumor floating around which indicates that Indianapolis is movring toward a municipally owned city-wide public access Wi-Fi network.

> The Penn Yan folks gave up because of the economic considerations.

Huh . . ??

What is going on nationally with ARES that the ARRL has decided to publish the following information?

http://www.arrl.org/announce/board-0407/

---

20. After discussion about the Amateur Radio Emergency Service, led by Mr. Walstrom, the Board was in recess for luncheon from 11:56 AM until 1:20 PM with current meeting participants present except Mr. Day. On motion of Mr. Walstrom, seconded by Mr. Goddard, the following resolution was unanimously ADOPTED:

WHEREAS, for security reasons and for purposes of establishing formal relationships with served agencies, ARES® groups within an ARRL section are increasingly in need of affirmative recognition; and

WHEREAS, ARES® (Amateur Radio Emergency Service®) is a program of, and both logos are registered trademarks of the American Radio Relay League, Incorporated;

NOW THEREFORE, it is ARRL policy that ARES® groups, and any group using the ARES® logo, shall acknowledge the nature of the ARES® program as an ARRL program, and abide by the guidelines of the program established by ARRL as amended from time to time, according to the following principles:

1. Each ARES® group will, when using the term "ARES" or "Amateur Radio Emergency Service," utilize the ® symbol in any printed matter or in any electronic media, and will acknowledge that both logos are registered marks of the American Radio Relay League, Incorporated and are used by permission.

2. In bylaws or other organizational documents, or by amendment of any existing bylaws or organizational documents, ARES® groups will acknowledge that ARES® is a program of the American Radio Relay League, and that entity will abide by the Rules and Regulations of the ARRL's Field Organization, as they may be amended from time to time, and by ARRL policies, rules, and guidelines contained in ARRL publications.

3. All ARES® records, membership rosters, and other data pertaining to the ARES® program wherever located are the property of the American Radio Relay League, Incorporated.

Back in '74 when I first wanted me a CB radidio, I jes took my .22 and
shot a hole in the roof of my pickup for the aerial. Dang. It was
too small and it went through the seat. So next I took my .38 and
made another hole. Tried to use the first hole but missed. At least
that time I got it right and shot from the inside. Still too small so
I barrawed a friends .44. That did it. My ears rang for a month tho.
Mounted the aerial there and it worked for years. Chewing gum filled
the other two holes jes fine. Never did have to drill a hole. I dont
like drillin holes in my pickup either.

I counted 17 repeaters. With the hundreds of repeaters on the air in the
good old USA, that certainly isn't a large audience.

Only those who act like idiots, lie, or otherwise act-a-fool would
have any reason to be concerned, and even those people have had no
reason to go to bed worried.

If you're not man (or woman) enough to stand behind your opinions
or comments, just say so and we'll leave it at that. I have at least
a small amount of respect for Lennie Anderson since he's brave enough
to put his name on his posts (as frought with hate and mistruth as
they)...However his apprentice, Brian "The Brain" Burke has taken to
posting under the name "BillyBeeper" even though "William" is no where
in any of his given name. Everyone knows who it is, but he's too
ashamed to sign his posts. Having been proven (on several occassions)
to be as mistruthful and deceitful as he is, I guess I can understand
why...

Got an opinion you feel strong enough to put out in public? Then
be stalwart enough to stand behind it...Otherwise you're just another
annoying anonymous coward with Jell-o vertebrae and no strength of
conviction...If you don't believe in it that seriously, why should
anyone else?

>What is going on nationally with ARES that the ARRL has decided to publish
the following
>information?

>http://www.arrl.org/announce/board-0407/

---------- A bit of historical information: ----------

The ARRL set up a committee to look into digital communications for ARES
last year.

Talking to one of the committee members early on, not long after this
digital group was assembled, I was told that two or three affluent and
powerful members of the committee had already decided the group's final
conclusion, to utilize the Winlink 2000 system for ARES HF communications.
The six months or so that the committee "studied and discussed" the matter
were a formality, a sham.

I know of three persons who attempted to inject a note of sense into the
issue, but all attempts to suggest that anything other than Winlink2000 be
used were rejected by the committee, often rudely and in one case the
rejection involved name-calling and ridicule of fellow Hams that was
entirely uncalled-for.

A note of sense? - As a digital experimentor, I know that finding space
anywhere on the Ham bands to operate the new wide digital modes like PACTOR
II and PACTOR III without interfering with other Hams is extremely
difficult. A PACTOR III signal is six or seven times as wide as a Packet
signal, for example, and fifteen times wider than PSK31. - This proposal
calls for dozens and dozens of these stations operating from NWS EOC's
around the country - if the committe were being honest about it's
intentions.

The committee was not being honest about its intentions though, which may
explain why repeated attempts to talk sense to this committee failed.

Not being honest? - Take a look at the pdf file describing the committee's
plans. http://winlink.org/Emergency.htm While you are there, do a
word-search on the word "future" in the article. - You will find that as
often as not, the word 'future" is used in the article to describe the HF
links in this system. These "future" links are the ones I mentioned earlier,
the ones that knowlegable hams tried to warn the committee as to the
impracticality of. - The impossibility of getting that many wide-mode
digital stations on the air for any purpose without causing massive
interefence of every other ham-related activity on the air.

The thing is, you see, that the cynical members of this committee knew that they could ignore warnings about the chaos that multiple wide-mode digital signals would cause on our bands - because the comittee never intended for this system to use Ham Radio in the first place.

That's right; This is another one of those "Amateur Telephone" scams, where Internet junkies put Amateur Radio traffic on the Internet and call it "Ham Radio" because the data was taken from Hams. They lied about it because they knew that if they told the truth, thier non-ham ideas would be laughed right out of the hobby. Winlink2000 is another one of those "ham radio digital modes" that could not exist or operate without Internet linkages.

Yes, the ARRL actually decided that we as Hams should back up the Internet - by using the Internet. (Duh!)

In other words, these people have no clue whatsoever about emergency communications - but they are going to force their ingorant, anti-ham policies upon the Amateur Radio community anyway - with the help of the ARRL. - The result will be that all Hams will look like idiots, not just the members of this "committee".

What has this got to do with the ARRL's decision to "take over" ARES, it's logo and all of it's operational issues? - It is so they can cram this cynical non-radio solution down the throats of Amateur Radio operators who are just trying to use Ham Radio. Take-overs like this are usually motivated by a desire to force something upon people against their will, and this shameful takeover attempt on ARES by the ARRL is no exception.

I call it an "attempt" because ARES members across the country are already up in arms over this ignorant, cynical and destructive crap.

If you know any of the great Hams; The real Hams who pass emergency traffic every day on HF, please send them a copy of this E-mail. That way, when they have been pushed aside to make room for "Amateur Telephone" operators who do not even use radio, they'll know how it all happened, and why.

It's another attack on the hobby by cynical Internet junkies, aided and abetted by the ARRL, as they did with Packet Radio. We all know how Packet Radio ended up after this treatment... Now the same "wisdom" is being applied to ARES.

Isn't that "special"?

No more so "blessed" than hearing profanity in places of public
accomodation. The foul mouthed and the weak-minded will always be
with us, and we (yes, the Royal We)can only do so much to deter it.

One would hope that "knowing better" would rule the day, however
there will always be those who insist on being less than they can be
if only to "prove" that they have the right to be stupid and weak
minded.

When people complain about not using real identities on Usenet, I pull
out this old article. It pretty much says it all...

From caf-talk Caf Jun 8 19:52:43 1992
Newsgroups: comp.society
Subject: Anonymity and privacy on the network
Message-ID: <92083.072152SOCICOM@auvm.american.edu>
Date: 23 Mar 92 12:21:52 GMT
Organization: The American University - University Computing Center
Lines: 759
Approved: SOCICOM@AUVM

Moderator's note: The following article is a lengthy excerpt from a
recent issue of FIDONEWS concerning individual privacy and the use of
aliases or handles in computer-based communications. It was submitted
by
a comp.society reader who used a handle; because the excerpt is a
cross-
post from another electronic publication, I have taken the liberty of
viewing the use of a handle by sender as a request for privacy and
anonymity similar to the request a newspaper editor might receive in a
letter to the editor. Thus, while reprinting the submission, the name
and address of the sender are "withheld upon request." The article
raises a number of good points; the submission by a reader using a
handle
to preserve anonymity makes a point; and the editorial action of
submitting the reader's posting anonymously makes the question
current.
What are the implications of using aliases on the net?

THE JOY OF HANDLES
---
or:
EVERYTHING YOU ALWAYS WANTED TO KNOW ABOUT ME
(but have no right to ask)
---

* * * * *

We should never so entirely avoid danger as to appear
irresolute and cowardly. But, at the same time, we should
avoid unnecessarily exposing ourselves to danger, than
which nothing can be more foolish. [Cicero]

* * * * *

Do you trust me?

If you participate in computer conferencing, and you use your real name, then you'd better.

"Why?", you ask. "What can you do with my name?" To start with, given that and your origin line, I can probably look you up in your local phone book, and find out where you live. Even if you are unlisted, there are ways to locate you based on your name. If you own any property, or pay any utility bills, your address is a matter of public record. Do you have children in the public schools? It would be easy to find out. But that's just the beginning.

Former Chairman of the U.S. Privacy Protection Commission David F. Linowes, in his book "Privacy in America" (1989), writes of New York private investigator Irwin Blye:

"Challenged to prove his contention that, given a little time and his usual fee, he could learn all about an individual without even speaking with him, Blye was presented with a subject -- a New Jersey newspaperman.... The result was a five-page, single-spaced, typed report which documented, though not always accurately, a wide sweep of the journalist's past, and was detailed to the point of disclosing his father's income before his retirement."

Who am I? If I don't post, you might not even know I exist. I could be on your local Police Department, or an agent working with the IRS, or some federal law-enforcement agency. I could be a member of some fanatical hate group, or criminal organization. I might even be a former Nixon White-House staffer!

I could be that pyromaniacal teenager you flamed last weekend, for posting a step-by-step description of how he made plastic explosive in his high-school chem lab. He seemed kind of mad.

But you're an upstanding citizen; you have nothing to hide. So why not use your name on the nets? Trust me. There's nothing to worry about.

Is there?

* * * * *

WHAT'S ALL THIS BROUHAHA?

Stupidity is evil waiting to happen. [Clay Bond]

Not long ago in Fidonet's BCSNET echo (the Boston Computer Society's national conference), the following was posted by

the conference moderator to a user calling himself "Captain Kirk":

"May we ask dear Captain Kirk that it would be very polite if you could use your real name in an echomail conference? This particular message area is shared with BBS's all across the country and everyone else is using their real name. It is only common courtesy to do so in an echomail conference."

One of us (mkj) responded with a post questioning that policy. Soon the conference had erupted into a heated debate! Although mkj had worried that the subject might be dismissed as trivial, it apparently touched a nerve. It brought forth debate over issues and perceptions central to computer communications in general, and it revealed profound disparities in fundamental values and assumptions among participants.

This article is a response to that debate, and to the prevailing negative attitudes regarding the use of handles. Handles seem to have a bad reputation. Their use is strangely unpopular, and frequently forbidden by network authorities. Many people seem to feel that handles are rude or dishonest, or that anyone wishing to conceal his or her identity must be up to no good. It is the primary purpose of this article to dispel such prejudices.

Let us make one thing perfectly clear here at the outset: We do NOT challenge the need or the right of sysops to know the identities of their users! But we do believe that a sysop who collects user names has a serious responsibility to protect that information. This means making sure that no one has access to the data without a legal warrant, and it certainly means not pressuring users to broadcast their real names in widespread public forums such as conferences.

* * * * *

SO YOU WANT TO BE A STAR?

John Lennon died for our sins. [anonymous]

Andy Warhol said that "In the future, everyone will be famous for fifteen minutes". The computer nets, more than any other medium, lend credibility to this prediction. A network conference may span the globe more completely than even satellite TV, yet be open to anyone who can afford the simplest computer and modem. Through our participation in conferencing, each of us becomes, if only briefly, a public figure of sorts -- often without realizing it, and without any contemplation of the implications and possible

consequences.

Brian Reid (reid@decwrl.DEC.COM) conducts and distributes periodic surveys of Usenet conference readership. His statistical results for the end of 1991 show that of the 1,459 conferences which currently make up Usenet, more than fifty percent have over 20,000 readers apiece; the most popular conferences are each seen by about 200,000 readers! Mr. Reid's estimate of total Usenet readership is nearly TWO MILLION people.

Note that Mr. Reid's numbers are for Usenet only; they do not include any information on other large public nets such as RIME (PC-Relaynet), Fido, or dozens of others, nor do they take into account thousands of private networks which may have indirect public network connections. The total number of users with access to public networks is unknown, but informed estimates range to the tens of millions, and the number keeps growing at an amazing pace -- in fact, the rate of growth of this medium may be greater than any other communications medium in history.

The special problems and risks which arise when one deals with a large public audience are something about which most computer users have little or no experience or understanding. Until recently, those of us involved in computer conferencing have comprised a small and rather elite community. The explosion in network participation is catching us all a little unprepared.

Among media professionals and celebrities, on the other hand, the risks of conducting one's business in front of a public audience are all too familiar. If the size of one's audience becomes sufficiently large, one must assume that examples of virtually every personality type will be included: police and other agents of various governments, terrorists, murderers, rapists, religious fanatics, the mentally ill, robbers and con artists, et al ad infinitum. It must also be assumed that almost anything you do, no matter how innocuous, could inspire at least one person, somewhere, to harbor ill will toward you.

The near-fatal stabbing of actress Theresa Saldana is a case in point. As she was walking to her car one morning near her West Hollywood apartment, a voice behind her asked, "Are you Theresa Saldana?"; when she turned to answer, a man she had never seen before pulled out a kitchen knife and stabbed her repeatedly.

After her lengthy and painful recovery, she wrote a book on the experience ("Beyond Survival", 1986). In that book she wrote:

[pg 12] "... Detective Kalas informed me that the assailant, whom he described as a Scottish drifter, had fixated upon me after seeing me in films."

[pg 28] "... it was through my work as an actress that the attacker had fixated on me. Naturally, this made me consider getting out of show business ..."

[pg 34] "For security, I adopted an alias and became 'Alicia Michaels.' ... during the months that followed I grew so accustomed to it that, to this day, I still answer reflexively when someone calls the name Alicia!"

Or consider the fate of Denver radio talk show host Alan Berg, who in 1984 died outside his home in a hail of gunfire. Police believe he was the victim of a local neo-nazi group who didn't like his politics.

We are reminded of the murders of John Lennon and Rebecca Shaffer; the Reagan/Hinckley/Foster incident; and a long string of other "celebrity attacks" of all sorts, including such bizarre events as the occupation of David Letterman's home by a strange woman who claimed to be his wife! There is probably no one in public life who doesn't receive at least the occassional threatening letter.

Of course, ordinary participants in network conferencing may never attract quite the attention that other types of celebrities attract. But consider the following, rather less apocalyptic scenarios:

-- On Friday night you post a message to a public conference defending an unpopular or controversial viewpoint. On Monday morning your biggest client cancels a major contract. Or you are kept up all night by repeated telephone calls from someone demanding that you "stop killing babies"!

-- You buy your teenage son or daughter a computer and modem. Sometime later you find your lawn littered with beer bottles and dug up with tire marks, or your home vandalized or burglarized.

-- One day you are nominated to the Supreme Court. Who are all these strange people on TV claiming to be your friends? How did that fellow know your position on abortion? Your taste in GIFs?

Celebrities and other professional media personalities accept the risks and sacrifices of notoriety, along with the benefits, as part of their chosen careers. Should computer conference participants be expected to do the same? And who should be making these decisions?

* * * * *

OTHER MEDIA

When thou art at Rome, do as they do at Rome [Cervantes]

Older media seem to address the problems of privacy very differently than computer media, at least so far. We are not aware of ANY medium or publication, apart from computer conferencing, where amateur or even most professional participants are required to expose their true names against their will. Even celebrities frequently use "stage names", and protect their addresses and phone numbers as best they can.

When a medium caters specifically to the general public, participants are typically given even greater opportunities to protect their privacy. Television talk shows have been known to go so far as to employ silhouetting and electronic alteration of voices to protect the identities of guests, and audience members who participate are certainly not required to state their full names before speaking.

The traditional medium most analogous to computer conferencing may be talk radio. Like conferencing, talk radio is a group discussion and debate medium oriented toward controversy, where emotions can run high. Programs often center around a specific topic, and are always run by a "host" whose role seems analogous in many respects to that of a conference moderator. It is therefore worth noting that in talk radio generally, policy seems to be that callers are identified on the air only by their first names (unless of course they volunteer more).

Finally, of course, authors have published under "pen names" since the dawn of publishing, and newspapers and magazines frequently publish letters to the editor with "name and address withheld by request" as the signature line. Even founding fathers Alexander Hamilton, James Madison and John Jay, in authoring the seminal Federalist Papers in 1787 for publication in the Letters columns of various New York City newspapers, concealed their identities behind the now-famous psuedonym "Publius".

What would you think if someone called a radio talk show demanding to know the identity of a previous caller? Such a demand would undoubtedly be seen as menacing and inappropriate in that context. Yet that same demand seems to arise without much challenge each time a handle shows up in a computer conference. The authors of this article feel that such demands should always be looked upon as suspicious, and that it would be beneficial for moderators

to take upon themselves the responsibility of making sure that besieged handle-users are aware of their right to refuse such inappropriate demands.

It is reasonable to assume that privacy policies in traditional media are the result of hard-won wisdom gained from long experience. Are we so arrogant that we cannot learn from others? It is not hard to imagine the sorts of problems and experiences which shaped these policies in the old media. Will we have to wait for similar problems to occur on the computer networks before we learn?

* * * * *

PRIVACY AND SURVEILLANCE

In an effort to identify people who fail to file tax returns, the Internal Revenue Service is matching its files against available lists of names and addresses of U.S. citizens who have purchased computers for home use. The IRS continues to seek out sources for such information. This information is matched against the IRS master file of taxpayers to see if those who have not filed can be identified.
[COMPUTERWORLD, Sept. 1985]

Subject: The RISKS of Posting to the Net
-
I just had an interesting visit from the FBI. It seems that a posting I made to sci.space several months ago had filtered through channels, caused the FBI to open (or re-open) a file on me, and an agent wanted to interview me, which I did voluntarily... I then went on to tell him about the controversy over Uunet, and their role in supplying archives of Usenet traffic on tape to the FBI...
[RISKS Digest]

Also frequent are instances where computers are seized incident to an unrelated arrest. For example, on February 28, 1991, following an arrest on charges of rape and battery, the Massachusetts state and local police seized the suspect's computer equipment. The suspect reportedly operated a 650-subscriber bulletin board called "BEN," which is described as "geared largely to a gay/leather/S&M crowd." It is not clear what the board's seizure is supposed to have accomplished, but the board is now

shut down, and the identities and messages of its users are in the hands of the police. [CONSTITUTIONAL, LEGAL, AND ETHICAL CONSIDERATIONS FOR DEALING WITH ELECTRONIC FILES IN THE AGE OF CYBERSPACE, Harvey A. Silverglate and Thomas C. Viles]

Most of us have been brought up to be grateful for the fact that we live in a nation where freedom is sacred. In other countries, we are told as children, people are afraid to speak their minds for fear they are being watched. Thank God we live in America!

It would surprise most of us to learn that America is currently among the premiere surveillance nations in the world, but such, sadly, is indeed the case. Our leadership in technology has helped the U.S. government to amass as much information on its citizens as almost any other nation in history, totalitarian or otherwise. And to make matters worse, a consumer surveillance behemoth has sprung up consisting of huge private data-collection agencies which cater to business.

As Evan Hendricks, editor of "Privacy Times" (a Washington D.C.-based newsletter) has put it: "You go through life dropping bits and pieces of information about yourself everywhere. Most people don't realize there are big vacuum cleaners out there sucking it all up." [Wall Street Journal, March 14, 1991].

To get an idea of how much of your privacy has already been lost, consider the bits and pieces of information about yourself which are already available to investigators, and how thoroughly someone might come to know you by these clues alone.

A person's lifestyle and personality are largely described, for example, by his or her purchases and expenses; from your checking account records -- which banks are required by law to keep and make available to government investigators -- a substantial portrait of your life will emerge. Credit card records may reveal much of the same information, and can also be used to track your movements. (In a recent case, "missing" Massachusetts State Representative Timothy O'Leary was tracked by credit-card transactions as he fled across the country, and his movements were reported on the nightly news!)

Then there are your school records, which include IQ and other test results, comments on your "socialization" by teachers and others, and may reveal family finances in great detail. Employment and tax records reveal your present

income, as well as personal comments by employers and co-workers. Your properties are another public record of your income and lifestyle, and possibly your social status as well. Telephone billing records reveal your personal and business associations in more detail. Insurance records reveal personal and family health histories and treatments.

All of this information is commonly accessed by government and private or corporate investigators. And this list is far from exhaustive!

Now consider how easily the computer networks lend themselves to even further erosions of personal privacy. The actual contents of our mail and telephone traffic have up to now been subjected to deliberate scrutiny only under extraordinary conditions. This built-in safety is due primarily to the difficulty and expense of conducting surveillance in these media, which usually requires extended human intervention. But in the medium of computer communications, most surveillance can be conducted using automated monitoring techniques. Tools currently available make it possible and even cost-effective for government and other interests to monitor virtually everything which happens here.

Why would anyone want to monitor network users? It is well documented that, throughout the 1960s and 1970s, the FBI and other agencies of government, in operations such as the infamous COINTELPRO among others, spent a great deal of time and effort collecting vast lists of names. As Computer Underground Digest moderators Jim Thomas and Gordon Meyer recalled in a recent commentary (CuD #3.42):

"A 1977 class action suit against the Michigan State Police learned, through FOIA requests, that state and federal agents would peruse letters to the editor of newspapers and collect clippings of those whose politics they did not like. These news clippings became the basis of files on those persons that found there way into the hands of other agencies and employers."

To get onto one of these government "enemies" lists, you often needed to do nothing more than telephone an organization under surveillance, or subscribe to the "wrong" types of magazines and newspapers. Groups engaged in political activism, including environmental and women's rights organizations, were commonly infiltrated. The sort of investigative reporting which uncovered these lists and surveillances back in the '60s and '70s is now rare, but there is little reason to assume that such activities have ceased or even slowed. In fact, progressive computerization of local police LEIU activities (Law Enforcement

Intelligence Units, commonly known as "red squads") suggests that such activities may have greatly increased.

Within the realm of computer conferencing especially, there is ample reason to believe that systematic monitoring is being conducted by government and law-enforcement organizations, and perhaps by other hostile interests as well. In a recent issue of Telecom Digest (comp.dcom.telecom), Craig Neidorf (knight@EFF.ORG) reported on the results of a recent Freedom of Information Act request for documents from the Secret Service:

" ... The documents also show that the Secret Service established a computer database to keep track of suspected computer hackers. This database contains records of names, aliases, addresses, phone numbers, known associates, a list of activities, and various [conference postings] associated with each individual."

But the privacy issues which surround computer communications go far beyond the collection of user lists. Both government and industry have long pursued the elusive grail of personality profiling on citizens and consumers. Up to now, such ambitions have been restrained by the practical difficulty and expense of collecting and analyzing large amounts of information on large numbers of citizens. But computer communications, more than any other technology, seems to hold out the promise that this unholy grail may finally be in sight.

To coin a phrase, never has so much been known by so few about so many. The information commonly available to government and industry investi-gators today is sufficient to make reliable predictions about our personalities, health, politics, future behavior, our vulnerabilities, perhaps even about our innermost thoughts and feelings. The privacy we all take for granted is, in fact, largely an illusion; it no longer exists in most walks of life. If we wish to preserve even the most basic minimum of personal privacy, it seems clear that we need to take far better care on the networks than we have taken elsewhere.

* * * * *

FREEDOM

Human beings are the only species with a history. Whether they also have a future is not so obvious. The answer will lie in the prospects for popular movements, with firm roots among all sectors of the population, dedicated to values that are suppressed

or driven to the margins within the existing social
and political order...
[Noam Chomsky]

In your day-to-day social interactions, as you deal with employers, clients, public officials, friends, acquaintances and total strangers, how often do you feel you can really speak freely? How comfortable are you discussing controversial issues such as religion, taxes, politics, racism, sexuality, abortion or AIDS, for example? Would you consider it appropriate or wise to express an honest opinion on such an issue to your boss, or a client? To your neighbors?

Most of us confine such candid discussions to certain "trusted" social contexts, such as when we are among our closest friends. But when you post to a network conference, your boss, your clients, and your neighbors may very well read what you post -- if they are not on the nets today, they probably will be soon, as will nearly everyone.

If we have to consider each post's possible impact on our social and professional reputations, on our job security and income, on our family's acceptance and safety in the community, it could be reckless indeed to express ourselves freely on the nets. Yet conferences are often geared to controversy, and inhibitions on the free expression of opinions can reduce traffic to a trickle, killing off an important conference topic or distorting a valuable sampling of public opinion.

More important still is the role computer networks are beginning to play in the free and open dissemination of news and information. Democracy is crippled if dissent and diversity in the media are compromised; yet even here in the U.S., where a "free press" is a cherished tradition, the bulk of all the media is owned by a small (and ever-shrinking) number of corporations, whose relatively narrow culture, interests and perspec-tives largely shape the public perception.

Computer communication, on the other hand, is by its nature very difficult to control or shape. Its resources are scattered; when one BBS goes bust (or is busted!), three others spring up in its place. The natural resiliency of computer communications (and other new, decentral-ized information technologies such as fax, consumer camcorders and cheap satellite links) is giving rise to a new brand of global "guerrilla journalism" which includes everyone, and defies efforts at suppression.

The power and value of this new journalistic freedom has recently shown itself during the Gulf War, and throughout Eastern Europe and the Soviet Union, as well as within the U.S. Just think of the depth and detail of information available on the nets regarding the Secret Service's recent "Operation Sundevil" and associated activities, compared to the grossly distorted, blatantly propagandistic coverage of those same activities given to the general public through the traditional media.

Historically, established power and wealth have seldom been disposed to tolerate uncontrolled media, and recent events in this country and elsewhere show that computer media are sometimes seen as threats to established interests as well. To understand the role of handles in this context, it is useful to note the flurries of anti-handle sentiment which have arisen in the wake of crackdowns such as Sundevil, or the Tom Tcimpidis raid in the early 1980s. Although few charges and fewer convictions have typically resulted from such operations, one might be tempted to speculate that the real purposes -- to terrorize the nets and chill freedoms of speech and assembly thereon -- have been achieved.

In this way, sysops and moderators become unwitting accomplices in the supression of freedom on the networks. When real name requirements are instituted, anyone who fears retaliation of any sort, by any group, will have to fear participation in the nets; hence content is effectively controlled. This consideration becomes especially important as the nets expand into even more violent and repressive countries outside the U.S.

We must decide whether freedom of information and open public discussion are in fact among the goals of network conferencing, and if so, whether handles have a role in achieving these goals. As access to the networks grows, we have a rare opportunity to frustrate the efforts of governments and corporations to control the public mind! In this way above all others, computers may have the potential to shape the future of all mankind for the better.

* * * * *

A CALL TO ACTION

The move to electronic communication may be a turning point that history will remember. Just as in seventeenth and eighteenth century Great Britain and America a few tracts and acts set precedents for print by which we live today, so what we think and do today may frame the information system for a substantial period in the future.

[Ithiel de Sola Pool, "Technologies of Freedom", 1983]

There was a time when anybody with some gear and a few batteries could become a radio broadcaster -- no license required. There was a time when anyone with a sense of adventure could buy a plane, and maybe get a contract to carry mail. Those early technological pioneers were probably unable to imagine the world as it is today, but their influence is strongly felt in current laws, regulations and policies with roots in the traditions and philosophies they founded and shaped.

Today the new pioneers are knitting the world together with computers, and the world is changing faster than ever. Law and ethics are scrambling to keep up. How far will this growth take us? No one can say for sure. But you don't need a crystal ball to see that computer communications has the potential to encompass and surpass all the functionality of prior media -- print, post, telegraph, telephone, radio and television -- and more. It seems reasonable to assume that computer communications will be at least as ubiquitous and important in the lives of our grandchildren as all the older media have been in ours.

It will be a world whose outlines we can now make out only dimly. But the foundations of that world are being built today by those of us exploring and homesteading on the electronic frontier. We need to look hard at what it will take to survive in the information age.

In this article we have attempted to show, for one very narrow issue, what some of the stakes may be in this future-building game. But the risks associated with exposing your name in a computer conference are not well defined, and various people will no doubt assess the importance of these risks differently. After all, most of us take risks every day which are probably greater than the risks associated with conferencing. We drive on the expressway. We eat sushi. To some people, the risks of conferencing may seem terrifying; to others, insignificant.

But let us not get side-tracked into unresolvable arguments on the matter. The real issue here is not how dangerous conferencing may or may not be; it is whether you and I will be able to make our own decisions, and protect ourselves (or not) as we see fit. The obvious answer is that users must exercise their collective power to advance their own interests, and to pressure sysops and moderators to become more sensitive to user concerns.

To help in that effort, we would like to recommend the following guidelines for user action:

-- Bear in mind John Perry Barlow's observation that "Liberties are preserved by using them". Let your sysop know that you would prefer to be using a handle, and use one wherever you can.

-- Try to support boards and conferences which allow handles, and avoid those which don't.

-- When using a handle, BEHAVE RESPONSIBLY! There will always be irresponsible users on the nets, and they will always use handles. It is important for the rest of us to fight common anti-handle prejudices by showing that handles are NOT always the mark of an irresponsible user!

-- Educate others about the importance of handles (but NEVER argue or flame anyone about it).

To sysops and moderators: We ask you to bear in mind that authority is often used best where it is used least. Grant users the right to engage in any harmless and responsible behaviors they choose. Protect your interests in ways which tread as lightly as possible upon the interests of others. The liberties you preserve may be your own!

In building the computer forums of today, we are building the social fabric of tomorrow. If we wish to preserve the free and open atmosphere which has made computer networking a powerful force, while at the same time taking care against the risks inherent in such a force, handles seem to be a remarkably harmless, entertaining and effective tool to help us. Let's not throw that tool away.

Lemmee get this straight.... You agree that somehow the social fabric of tomorrow is being built - and apparently properly so - by the use of anonymously giving opinions?

The anonymous posters here and in the rest of usenet are the ones accusing each other of every heinous crime against humanity. They are the ones who engage in harassment tactics and whatever denigration they can offer whoever their chosen enemy is.

Do you seriously think that it is only since the age of newsgroups that identity theft and stalking has happened? If you do, you are just thinking like every new generation of teenagers that think *they* are the first ones to discover sex. It's here, it's always been here, and will always be here.

Are the anonymous posters accusing each other of child molestation or incest "remarkably harmless, entertaining, and effective"?

Are the anonymous posters posting embarrassing details of others prior criminal records "remarkably harmless, entertaining, and effective"?

Are anonymous posters that post disgusting, untrue and libelous things about some Usenet enemies innocent wives and children "remarkably harmless, entertaining, and effective"?

Sorry, but for all it's length, that ancient Fidonet tome is quite simply wrong.

And finally, so is a person that actually thinks he or she is posting anonymously. Say something interesting enough, and you can be identified.

- Mike

Some time ago, when I noted the reasons why BPL won't work, I pointed out that power companies would start having to fix those noise problems in order to just get service into local houses. So you can just multiply Dan's and your problem a hundredfold, and since they probably won't be any more eager to fix that than the occasional Ham's problems, I'm convinced they will decide it is an unprofitable venture.

Yes, it certainly does seem to be going that way. Some utilities are backing off, and hopefully many more will soon follow.

One reason they are backing off is that Hams have complained about the Interference. The ARRL has made extensive efforts to see that Hams would be ready and informed before being confronted with BPL, and the ARRL went on to support the complaints of Hams in key locations.

Hams would have complained anyway - but perhaps not as effectively as they have with the assistance of the ARRL. We got quicker, better results that will have a significant impact over the long run. - A good start on dealing with BPL.

Like most Hams, I have my points of disagreement with some aspect or another of the ARRL. Overall though, I am impressed with what we get for our forty-dollar bill.

It is a display of how things can work. Hams are documenting,
recording, and complaining. Officials are inspecting and finding out
that we are correct in our fears of BPL interference.

What will be interesting is if the FCC decides to try to relax the
rules. I don't know how they can do that. In principle, it would have to
be a new ruling that ALL licensed devices would have to accept
interference form non-licensed devices, and to not interfere with
non-licensed devices. A 180 degree reversal of the present rules.
Anything else will doom BPL.

Just think of that needed ruling. Chaos would be the result. Do you
think that manufacturers of other equipment, such as computers,
telephones, heck any unlicensed intentional or unintentional RF radiator
wouldn't be slap happy to see such new rules? RF shielding costs money,
and if El-Cheapo computer company can save a few bucks by eliminating
shielding, then they will.

But then you think , maybe all these unlicensed RF radiators are going
to interfere with each other? Uh, yup! It will be chaos.

It's what you get when ideology trumps physics!

OK, mud-for-brains, let's walk you through this...

The retort by the cowardly anonymous poster was 'BWAHHHHHHHHHHHHHHHH"

A whine, the supposed simulation of someone. Someone feighning infantile
behaviour.

I, on the otherhand, have used the "BBBWWWWHHHHAHAHAHAHAHAHAHAHA", a
rolling, gregarious laugh, a newsgroup simulation of rolling on the floor

laughing at someone's (usually your's or Lennie's) idiotic behaviour.

Now...is there anything ELSE we can help you to understand...?!?!

(Mike, isn't it embarrassing, having to lead a grown adult by the hand like that...?!?!

Usually when I see someone bitching about Radio Shack it's from one of
the small brained no-lifers who get their kicks from going to Radio Shack
and trying to show off how much more technically intelligent they are than
the clerks behind the counter.

Unfortunately, I can't make an assessment of your web site to see if it's
of the same ilk, because it appears to be shut down.

Awww.....

Let's all say 'Too F...in Bad" in unison. Doesn't seem like you're getting
the
internet support you wanted!

If you don't like Radio Shack, why do you go there? Unless, of course,
you like the abuse you think you get, and go just to get more ammo!

Wait, I didn't come here for abuse, I came for an argument! Arguments
are two doors down on the right.

What this anonyminity does is allow otherwise baseless, yellow, caustic
and often outright distruthful rumor to be promulgated without fear of
accountability.

For those who need it, there are "whistleblower" laws to protect those who
have a valid complaint, and established methodology for getting those
complaints resolved.

Blasting the net with the ususal "IT'S MY RIGHT" rhetoric is just a
cowardly way of saying that you do not have the faith of your own convictions
to stand behind what you are saying.

If you don't have the faith of convictions in your own opinions, what
gives you the right to demand that I respect your opinions?

They're idiots, Ron.

The First Amendment was written to prevent government interference in
public expression, NOT to allow foul mouthed and vulgar idiots to run amuck
with some percieved government sanctions for thier ill behaviour.

Exactly.

If Lennie would stop interspersing his occassionally valid or relevent
posts with hatred, vulgarity and otherwise spiteful rhetoric, then he wouldn't
catch the flak he does.

Nor would you.

He can effectively express his anti-Morse Code testing agenda without
being rude or antagonistic, but unfortunately it's not in his character to be
polite or considerate.

Lennie has, on several occassions, posted stuff which >>I<< complimented
him on and even thanked him for.

His ususal repsonse is to just open the wounds a bit more an make me regret having been civil to him.

So do you.

The post I am responding to is clear evidence of YOUR own efforts to spread that flame war.

Humiliating to get caught with your hand in the jar again, isn't it, Brian? When will you learn?

Bwaaahhh etc was the *only* think in Bobby Joe's reply. Steve usually has something else in the message.

- Mike KB3EIA -

Mike, it's enough to see that you instantly knew who Yell Yell was. And I guess an additional little bit of sarcasm and/or personal attack takes the moronic edge off of "Bwahhhhhh..." whenever Yell Yell uses it.

Thanks for your perspective, bb

> were a formality, a sham.

Why was it a sham?

Maybe you're one who thinks that committees always come up with the
right solution.

Or maybe you're one who thinks that a committee always comes up with
the wrong solution.

Maybe sometimes committees come up with good solutions and maybe
sometimes they come up with not so good solutions.

Are committees dictatorship-like? Can they be overridden?

> I know of three persons who attempted to inject a note of sense into the
> issue,

Were they committee members? What was their "note of sense?"

but all attempts to suggest that anything other than Winlink2000 be
> used were rejected by the committee, often rudely and in one case the
> rejection involved name-calling and ridicule of fellow Hams that was
> entirely uncalled-for.

Oh, dear me. Did they use a yiddish word for "penis?" It's use
appears to be widely supported by the amateur community.

> A note of sense? - As a digital experimentor, I know that finding space
> anywhere on the Ham bands to operate the new wide digital modes like PACTOR

In a communications emergency, I believe that they'll be given the
bandwidth.

> The committee was not being honest about its intentions though, which may
> explain why repeated attempts to talk sense to this committee failed.

Ah ha!

> Not being honest? - Take a look at the pdf file describing the committee's

> impracticality of. - The impossibility of getting that many wide-mode
> digital stations on the air for any purpose without causing massive
> interefence of every other ham-related activity on the air.

Everyone gets upset about the future.

Some are so afraid of it that they don't want anything to change.
They just want to keep doing the same old thing w/o any interference
from anything new-fangled.

Some don't even want anyone new to interfere with their thinking.

> The thing is, you see, that the cynical members of this committee knew that
> they could ignore warnings about the chaos that multiple wide-mode digital

> modes" that could not exist or operate without Internet linkages.

Phew! I thought that they might be holding out for CW nets.

> Yes, the ARRL actually decided that we as Hams should back up the
> Internet - by using the Internet. (Duh!)

We have the leadership that we deserve.

> In other words, these people have no clue whatsoever about emergency
> communications - but they are going to force their ingorant, anti-ham
> policies upon the Amateur Radio community anyway - with the help of the
> ARRL. - The result will be that all Hams will look like idiots, not just the
> members of this "committee".

But Amateur Radio has free reign on all the MARS frequencies, also.
We could form up some slow speed training nets, and some high speed
traffic nets (at a wopping 25 wpm). We could even send number groups
for decoded jpeg images. :)

> What has this got to do with the ARRL's decision to "take over" ARES, it's

I recall the very same group advocating the government continue to
force Morse Code on people.

> I call it an "attempt" because ARES members across the country are already
> up in arms over this ignorant, cynical and destructive crap.

They need to get the word out.

> If you know any of the great Hams; The real Hams who pass emergency traffic
> every day on HF, please send them a copy of this E-mail. That way, when they
> have been pushed aside to make room for "Amateur Telephone" operators who do

I didn't realize that emergencies were so prevalent that emergency
message traffic is passed everyday on amateur HF.

> It's another attack on the hobby by cynical Internet junkies, aided and
> abetted by the ARRL, as they did with Packet Radio. We all know how Packet

Hello Steve:

I fell out of my chair laughing at that one. That is first call Redneck
all the way.

But I must admit I have a bunch of coaxes entering my radio room from a
sliding glass window.

But the all time great was when my ol man (Dear ol Dad) knocked a hole
in the wall with a slege hammer and length of 1 1/2 Pipe. We needed to
get the coaxes in the radio room for the Moonraker 4, and Omni Antennas.
We had rented a house for a short while while getting another house
ready to move into.

The coaxes fit in the hole just fine. A few rags to keep the cool air
and bugs out, and started to hammer the San Fernando Valley from high a
top the heigths of Tujunga.

Oh the memeories.....

Jay in the Mojave

That's a reason I read it on the 'net. I can read faster than
someone speaking it, also I can skip the articles that I'm not
interested in (like "young ham of the year" and such) and go
to the BPL article instead of sitting thru it. Also, text
files are a lot less bandwidth than an MP3 of it.

If Wi-Fi can do more bandwidth (by orders of magnatude) than BPL,
then BPL makes no sense. The two would cost about the same to
set up, and if one would offer much better service than the other,
then it would be foolish to spend any money on the turkey. It
would be like using Morse code operators to send and receive
digital information for an internet connection to download an
mp3 file...

In the beginning of my problems the local power company sent out a engineer. After about an hour of showing him the racket, discussing the levels and how it trashed the signals, he asked "what happens when you disconnect your antenna". I replied with "the noise goes away". His reply "well there it is, just leave the antenna off". My next step was a letter to the FCC and the Public Service Commission.

Sorry Tom, I think that's about it, unless s/he's spouting one liners
about the superiority of anonymity.

Na ....freaking out in life brings little return especially on the newsgripes..... where I expect little of great consequence to happen. If you want to post as an alter ego ...then go right ahead ...doesn't bother me save for the fact that I would put more credence in someone with a name. I do however believe that calling names does little for us all.

Take care all ..... KI3R Tom Popovic Belle Vernon Pa .

Well Mike I can see being anon if you were operating a printing press in your basement that advocates a government overthrow but here in rec policy ????? Did you make it to Butler for the last fest ????? I was there for a bit and enjoyed seeing the fellows I haven't of late. I'd like to get up to the next one in Sept but don't think I will make it. Tell Dr. Brakeall hello if you see him .....I haven't since highschool in the mid 60's.

God Bless and 73 there Mike .... Tom KI3R

Sure did. Get this, I bought a violin! I bought a used HT too, just to
keep it a hamfest. I'll be out in September too. Butler is a really nice
medium sized Hamfest (both of them)

I was there for a

Cross-posted to: alt.radio.wktu,rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy

Well, I find it hard to believe that, in a weak moment, I visited the site mentioned below. It is obvious that a great deal of time and effort has gone into this thing, and to what cause? To save our rights? Me thinks not. What rights are we having trampled? You're right to slander RadioShack? That right is only in your mind. You are most likely a relatively well educated individual with many personal conflicts in his life and I feel deeply for you, but mostly your parents and family members. They most likely put up with your drivvel year after year and detest the site of you.

Why don't we just cut to the chase, and you explain, in a very short sentence or a very, very short paragraph what caused you to create this Radio Shack site that you claim sucks so bad that it has obviously destroyed your life and those of your loved ones? When They haven't harmed you. You are harming them by saying to the world that they suck.

I have enjoyed Radio Shack for many years. I was there when they became RadioShack, and I became a valued customer (I believe that because I still get free catalogs in the mail, not many do anymore 'ya know) to them and grew through the whole gammit of stuff they have added over the years and I must say that when I had a problem with a product, and that was extremely rare, they took care of it. In one case the manager returned my money because it was a last item and he couldn't replace it. A few years later when computers came along if this had happened, they could check all the stores in their system to see who still had it on the shelf and that store would mail it to me at my home. Is that cool? I say "Yea Verily".

I love Radio Shack. This little reply is probably enough to get you to open up KF5DEsucks.com I won't sue you unless you get nasty. All my friends will check in and post there I'm sure they will have comments to make there, they have a lot of freee speech to use 'ya know. I have a friend that can enlist, in moments hundreds of hackers that believe in not only free speech but free hacking tooo!! Free viruses', free wurmzs, 'n free other stuff too.

After that you can open up another site, KF5DEreallysucks.com

Or, you can channel your efforts into something productive and usefull and possibbly profitable for yourself and your suffering family which will no doubt heal many open wounds.

Butch Magee, KF5DE
Diamondhead, MS 39525
wow, just can't believe i'm gonna push that send icon.

I will make this final post on the topic:

He sees fit (whether properly or not) to post his weekly script here. Why won't he come out and defend himself by disclosing where the finances of ARN really go? He certainly knows that he has been challenged on this issue; all he has to do is read the posts. We know that he does as the Internet newsgroups may lead him (and his competitors) to stories sometimes before other sources do.

My answer: Because he knows that I am correct and he doesn't want to expose his operation by commenting or responding.

My opinion is not alone. I have asked some of the other operators in my area, including one who runs a radio school (not Gordon West), and they know of no information that would refute my conclusion. Granted that BP may not have the burden of proof, but I have made a prima-facie case based on what information is in the public knowledge.

Certainly true today, but historically not. The change started about 10 years ago as the general populace, not just the "educated" (since colleges and government installations that employ college graduates were the bulk of the pre-1995 Internet), gained access.

This is a radio group, not a history of the Internet, so can we return to appropriate topics?

Could it be that the ARRL has finally come to its senses and realized that "ARES" is really its "wet dream" for that which the U.S. Government had actually designated as RACES (by both the FCC and FEMA)?

He is if he can't figure out that he should have asked on "rec.radio.cb" which, if he were searching for a CB radio forum, he would have found long before "rec.radio.amateur.*" (of which ".misc" is a better place than ".policy", but ".equipment" might be even better).

I'm not crying, Brain. As I indicated before, I have no reason
to show any amount of respect or consideration of the comments of a
person who doesn't have the strength of conviction to put his/her name
to their comments.

You, for example, have taken to hiding behind this "billybeeper"
screen name, as if you think it hides your true identity of Brian
Burke, Amateur call N0IMD, and e mail address of brianburke@juno.com
from the rest of the world.

I also note that "billybeeper" started about the time you
expressed your "admiration" for Lennie Anderson. Coincidence? I
don't think so. I give him credit for having enough gonads for
signing his posts, but it still doesn't negate the fact that he's a
documented liar and antagonist. You're a liar, but you also lack the
strength of character to stand behind your own opinions, no matter HOW
fanciful or imaginative they are.

"Billybeeper" allows you SOME sense of "comfort" for your own
mistruthful posts and silly behaviour, but that's a placebo.

As for what you perceive as "out of (my) control or reach", I
suggest you talk to Vipul, among others...It ain't rocket science...

There ARE "nut cases" here, Brain...but I'm not one of them.

Perhaps a mirror might help you find one of them...

No thanks. I'll leave the viruses and worms out.

But I can almost imagine what and who is saying it. The Editors
of QRZ take a dim view of punks and social ner-do-well's who take
advantage of QRZ's service, then have the audacity to cry foul when
they (QRZ) cann thier foul, abusive or unpaid commercial posts.

Wieners like that deserve what they get...canned.

Because this is an U N M O D E R A T E D newsgroup ABOUT Amateur Radio.
Many if not most of his "posts" have information DIRECTLY RELATED to Amateur
Radio POLICY, Dieter.

He's under NO REQUIREMENT from the FCC, Congress, you or I to get ANYONE'S
permission to do it!

U-N-M-O-D-E-R-A-T-E-D

Do I need to buy you a Webster's, Dieter?

>Why won't he come out and defend himself by disclosing where the finances of
ARN
>really go?

Defend himself against WHAT? You? Your shot-in-the-dark allegations?

>He certainly knows that he has been challenged on this issue; all
>he has to do is read the posts.

And he's under WHAT obligation to read your grossly biased and obviously baseless accusations?

If you want to "challenge" him, Dieter, GO TO COURT!

I say you're wrong and I think he's got a better-than-average case against YOU for your bashing and allegations!

>We know that he does as the Internet
>newsgroups may lead him (and his competitors) to stories sometimes before
>other
>sources do.
>
>My answer: Because he knows that I am correct and he doesn't want to expose
>his operation by commenting or responding.

What's to respond to?

If you HAD the evidence for the allegations you keep making, you would have (or should have, as a concerned citizen), filed a complaint with the appropriate agencies. The IRS takes very dim exception to organizations who abuse thier tax-exempt status...You might even get a reward.

You haven't, which leads me to believe you're just huffing and puffing.

>My opinion is not alone. I have asked some of the other operators in my

You have nothing.

You make allegations based solely upon your personal angst against Mr Pasternak, and YOU know that if you filed a sworn complaint you'd wind up in trouble yourself. THAT is as transparent as glass.

Either ante-up some sort of valid, documented proof, or just admit you're barking at the moon.

Steve, K4YZ

Hopefully yes. Wi-Fi is classified as "broadband" but I don't know how
it compares with BPL in terms of Mb/sec vs. Mb/sec.

> The two would cost about the same to
> set up,

I wouldn't bet the farm on that. Wi-Fi "nodes" need the same cable or
fiber optic feeds as BPL does but then the costs of implementation go
'way down below the costs of implementing BPL. BPL is a hard-wired
very localized system with toxic side effects. A single Wi-Fi node can
serve dozens of users simultaneously over some pretty big areas
without any wires. Huge pluses vs. BPL.

Most of this country's major airports have Wi-Fi nodes ("hot spots").
Drop into yer seat in the podium areas, fire up the laptop and catch
up with your e-mail or whatever. Sixty bucks for the modem and yer
online. And they're already on the shelf and in use. Ditto the
Starbucks stores, truck stops, etc.

It doesn't take much of a stretch to imagine that the basic technology
can be deployed over huge swaths of users at low installation costs.
One inexpensive little black box up a pole per block or on cell phone
towers in urban and suburban neighborhoods, etc.

> and if one would offer much better service than the other,

> would be like using Morse code operators to send and receive
> digital information for an internet connection to download an
> mp3 file...

Wires for any type of communications purposes are already on their way into history. BPL was stillborn from the gitgo.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of August 1, 2004:

Novice - 30,809 (decrease of 18,520)
Technician - 262,659 (increase of 57,265)
Technician Plus - 57,932 (decrease of 70,928)
General - 139,277 (increase of 26,600)
Advanced - 79,264 (decrease of 20,518)
Extra - 105,591 (increase of 26,841)

Total Tech/TechPlus - 320,591 (decrease of 13,663)

Total all classes - 675,532 (increase of 740)

Mike, it's enough to see that you immediately knew who "Yell Yell" was. His reputation precedes him.

And I guess throwing in a "Putz" remark or two improves overall content of a "Bwahhhhhhh..." reply so much so that it is widely and genuinely accepted by the power amateur elite on R.R.A.P.

Thanks for your confirmation. bb

He no longer comes by. I informed Alabama power if I ever saw him on my property again I would have him arrested for excesive stupidity.

The gentleman that is NOW working on my case, is a employee of Alapower, but he is a ham. He even went to the ARRL school on RFI put on by W1RFI in Newington. He does a good job. However, still not good enough. That only took TWO YEARS to get him into the picture.

Steve's a big crybaby. Always crying about something. Cry, cry, cry.
He even cries about not crying, such as he did above.

Everyone else is the problem.

Everyone else is mistruthful.

Everyone else uses foul language.

Calls me out for posting "Old Fart" then calls me a Yiddish word
meaning "penis."

Hi, hi.

What a jerk.

This thread originated in the dodge truck group. It didn't get stupid until
it was crossposted into the radio group by W5O0XQ <al@dagroupmeter.net>.

Wrong .... here is the original post that originated in the Dodge Truck group by a long time poster to this group. Al (W500XQ) was the first to cross post it.

"Subject: cb antenna
Date: 27 Jul 2004 04:06:37 GMT
From: montanajeeper@aol.com (MontanaJeeper)
Organization: AOL http://www.aol.com
Newsgroups: alt.autos.dodge.trucks

id like to put a cb in the new dodge and im trying to figure out what type of antenna wont damage the body in one way or another. perhaps its just because the "new" hasnt worn off yet, but i dont want a ring on the roof left from a magnetic antenna anymore than i want to bore a hole into the side of the bed for a ball mount. ive considered the glass mount but am told that theyre prone to falling off and that reception is poor. so are there any cb antenna mounts that wont damage my truck over time or require drilling?
thanks,"

Jerry

I won't argue what kind of call the poster's name is because it's not relevant. This was never posted in any CB group. It has only been in alt.autos.dodge trucks and rec.radio.amateur.policy. The original message was started in alt.autos.dodge.trucks by MontanaJeeper on 7/26/2004 at 10:24 PM and got crossposted into rec.radio.amateur.policy by W5O0XQ on 7/27/2004 at 1:04 PM (central time zone).

Fred's the real nut case here. He cries all the time about anonymous posters. He's the control freak. He's potty mouth.
Listen carefully Fred, this is not your forum. You can't tell people what to do here. Go

back and censor your own
forums. And when you find one that's the least bit critical, do what you always do. Blame me and put my name on it.
W6DEK
http://fuckqrz.com

P.S. Don't you have some more names to remove from your incomplete database. rofl

You suggest I am crying, but there are no tears. I wonder what you are
talking about.

>Everyone else is the problem.

Only to someone who IS a problem.

>Everyone else is mistruthful.

An allegation of mistruthfulness from a person PROVEN to be mistruthful.
Cute.

>Everyone else uses foul language.

Not everyone. Just the weak minded.

>Calls me out for posting "Old Fart" then calls me a Yiddish word
>meaning "penis."

Calls you out for calling someone an "Old Fart"..?!?!

I'd ask you to show me that one, but we can pile it on the rest of the
allegations you've made but never substantiated.

>Hi, hi.

Again with the CB talk.

>What a jerk.

Hmmmmmmmmmm.....

You'e a proven liar.

You hide behind a(n) (ineffective) pseudonym.

You sign your posts "William", however that's not your name.

You make silly assertions about Amateur Radio policy and Amateur Radio
practice that anyone with more than a months worth of experience ought to know
better for...

To top it off you make public expressions of admiration for another person who is himself known for gross lying and mistruthfulness.

And you call ME a jerk...?!?!?

Brian, you really are a piece of work...Do you teach your kids that this is acceptable behaviour...?!?!

Make no mistake...there's no "demand".

I simply state that if you don't have the strength of conviction in your own opinions to stand behind them, then you're a coward.

It really is THAT simple.

From: QRZ Sucks <ham@qrz.com>
Message-ID: <TIHPc.104$a%1.66@fe39.usenetserver.com>
Source record: 95298

This announcement applies to any registered user of the QRZ website whose login username is NOT the same as their callsign. If you login using your callsign then the following does not apply to you.

Our policy regarding the selection of login names for the QRZ website has not been changed in several years. During this time, we've gained a lot of practical experience on what works, what doesn't work, and what should never work. As a result of the combined experience of the tireless volunteers who help maintain the site, we are implementing a number of changes that will improve the overall level of service that is provided by QRZ.

For several years, we have generally allowed users to choose any login name that they may wish. While the vast majority of users register using their amateur radio callsign, there several thousand users registered with "made up" names such as "radiowizard", or "RFDOC".

In order to let people choose arbitrary names, we were forced to maintain a separate lookup registry that that would match these names to the callsign(s) belonging to the same individual. Over time, this process has become difficult to manage and somewhat error prone.

Our experience has clearly shown that, all things being equal, a user's callsign makes the best login id. Despite this, however, we've always made allowances for our users who are not licensed amateurs so that they too could contribute to the richness of the site.

Another artifact of providing arbitrary user names is the prospect of anonymity. In other words, some folks who could just as easily register using their amateur radio callsign, choose instead to use a fake name as a means of concealing their identity.

Anonymity, however, has never been a goal of QRZ.COM. Our Forums were not created to provide anonymous screens for people to stand behind and hurl libelous insults towards one another. In fact, the vast majority of so-called "bad apples" on our website have been among the ranks of those who register without using a callsign and who use highly suspicious anonymous mail services for their registration.

Today, our greatest workload in maintaining the site is the administration of user names, accounts, and passwords. The number of "I can't login" emails that we get on a daily basis is both impressive and frustrating. It is especially prevalent among those users who register multiple times (sometimes out of frustration) and in doing so fail to realize that they are actually making things worse, not better.

It may sound silly, but a fairly large percentage of our
users will write in complaining about problems and yet fail to identify
themselves. No username, no callsign, nothing. It should come as no
surprise that when this happens, we are unable to provide any helpful
assistance. Our new policies seek to address these and similar issues
head-on.

We are issuing policy changes so that for the greater good, 1) fewer
users will experience problems, 2) users will have an easier time
obtaining help, and 3) that the overall website experience at QRZ will
be more pleasurable for all.

Here is a summary of the changes that are coming soon:

QRZ Website Policy Changes
---

1. Two Levels of Membership

Henceforth, there will be two levels of membership on the QRZ
website, members who are licensed amateurs (the HAM level) and those
who are not (the GUEST level). All In order to be registered as a
member at the HAM level, your login ID must be your amateur radio
callsign, and, that callsign must exist in our callsign database.

You may have multiple callsigns however you may have only ONE login
account. You will still have the ability to manage all of your
callsigns by using your one login account.

2. Privileges Associated with Membership Level

HAM Level:
Full read/write access to all public QRZ forums, plus the ability
to make changes and/or additions to listings in our callsign
database.

GUEST Level:
Full read access to all public QRZ forums. Read/write access
(i.e. the ability to post articles or comments) will be limited
to the Help Forum, the For Sale Forums, and the Questions and
Answers Forum. No access to callsign database editing functions
will be permitted.

3. Prohibited Activities

We reserve the right to terminate the current and future membership
status of any user who engages in the following:

a. The registration of multiple login accounts for the
purposes of deception, confusion, or otherwise attempting
to conceal their identity.

b. Any attempt to subvert or otherwise circumvent the security
and access policies, rules, or mechanisms on this site for
any purpose.

c. The harassment of any user, staff member, or volunteer
of this system.
d. The use of any information derived from this website
that contributes in any way to SPAM or unsolicited email
of any kind.

e. The posting of obscene or offensive material on the site.
QRZ reserves the sole right to determine what is either
obscene or offensive.

LOL! Now you are using sock puppets, Jerry-Nosey, Nosey-Jerry.
Who is the CB op who made the original post? Probably
Nosey-Jerry. 10-4 good buddy. go back to your CB group,
truck group, whatever, and stop X-posting to the ham radio
groups.

Whichever CB group and whatever sock puppet you used to
put it there then global post it before you X-posted it to the
radio environmentalist groups. Only you can answer that?
Our group is not interested in trucks.

Getting rid of Saddam was a dream come true for Osama Bin Laden, the
US is universally hated in the Arab World. The War on Terror has been
off the radar screen for almost two years with the business in Iraq
taking all the attention.

> If Lennie would stop interspersing his occassionally valid or relevent
>posts with hatred, vulgarity and otherwise spiteful rhetoric, then he
>wouldn't catch the flak he does.

Poor nursie, still confused and bull of ambivilance...

"Flak." Originally a German acronym for anti-aircraft artillery.
Ace of the CAP is under perceived attack again for shouting
obscenities down below to the troops he thinks are in trenches?

Not even Snoopy the WW1 ace (flying his Sopwith Camel
doghouse) could differentiate between reality (the food dish) and

daydreams. Go have a root beer at the little French cantina,
nursie, try to make out with the French filly serving there.

> Nor would you.
>
> He can effectively express his anti-Morse Code testing agenda without
>being rude or antagonistic, but unfortunately it's not in his character to be
>polite or considerate.

Yes. I don't subscribe to nursie's Maggot Times where he shouts
and yells like the "gunnery sergeant" he is NOT. [this is not the
corps but the corpse of the morsemen]

Apparently NONE of us can have any views different from the noble,
blue-blood (mostly cyanotic) "qualified" morsemen views of the
higher archy in this newsgrope. All those who are against the higher
archies of here express "hatred" for "all of amateur radio" by speaking
out against the gunnery nurse. Tsk.

> Lennie has, on several occassions, posted stuff which >>I<< complimented
>him on and even thanked him for.

"Always." Or, in his own words -

"BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHAHAH!!

Putz! Putz! Putz"

[nursie seems to have a fondness for penises...?]

> His ususal repsonse is to just open the wounds a bit more an make me
>regret having been civil to him.

Poor baby. Still suffering open wounds? After all these years?

Seek medical help. It isn't far away. Forget trying to treat it by
yourself...you aren't licensed to practice medicine on your own.

> So do you.
>
> The post I am responding to is clear evidence of YOUR own efforts to
>spread that flame war.

Poor nursie. Thinks he is the only one who can snarl, rant, and
rave in "freedom" and be immune. Nursie has mental immune
disorder/deficiency.

> Humiliating to get caught with your hand in the jar again, isn't it,
>Brian? When will you learn?

The only "humiliation" is nursie being the walking wounded,
stumbling along, looking in mirrors and calling all others by what
he sees in those images.

An example of the NEW U.S. ham radio. An EXTRA being the
role model of ALL amateur radio.

Nursie's major output in here is one-sided, hisself and his
obsession of hatred of a few others (who only disagree with him).

Not at all on the original subject of this thread. Everything to
nursie is his own hatred of a few. Poor thing.

Yes, Mike, it IS. :-)

Remember the double standard in here for Extras. Extras can do
anything, say anything, be as nasty as they want and that is OK.
Extras can even use cute little euphemisms for male organs as
long as it is done in a minority language-dialect ("putz" which is
Yiddish pejorative for a penis, as in one who can only think with
that particular head). So charming, what? :-)

Everybody NOT an American Amateur Extra has to be polite,
civil, obediant to all the snarly, snarky rantings of those noble
gentlemen of the amateur airraves, the CW-using Extras.

That is EXACTLY the way the CW-using Extras behave. Have you
forgotten already? Tsk.

Oh yes...Your antics have put me in a gut-wrenching roll many-a-time,
Lennie!

YOU need toread what was written, Sir Idiot.

> Right. You are Simon Pure. Never nasty to the rest of the
> maggots.

I squash maggots.

>>> Thanks for your perspective, bb
>>
>> Thanks for getting it WRONG again and proving my assertions about

>>your lack of truthfulness and character correct, Brian.
>
> Didn't you leave off some of the other choice epithets? Such as
> "cowardice" and "penis head (in Yiddish)?"

"Cowardice" is not a profanity...It may be to YOU, since I have lavished it upon you (with good cause) on several occassions. Nor does "putz" appear on ANY list that I am aware of that labels it a prfanity.

> You are losing your touch, gunnery nurse. Straighten the brim on
> your campaign hat and tuck the swagger stick under the left arm
> like a good corpse gunnery nurse.

No swagger here, Lennie.

I am not the one who suffers from an inability to tell the truth or needs to embellish my career with false accomplishments to cover up some mediocrity.

> Learn some more Yiddish and the way to use it. Oy, gevalt!

Do it yourself, Lennie....While you're studying for your Amateur license.

Upset because I DID get to spend some time with REAL French women IN
France, Lennie...?!?!

Too bad for Lennie! Was so busy passing those 1.2 million messages at ADA
he didn't get to travel while he was in the Army.

>> He can effectively express his anti-Morse Code testing agenda without
>>being rude or antagonistic, but unfortunately it's not in his character to
>be

> corps but the corpse of the morsemen]

So....after 14 years of college and an alleged career as a "radio
electronics professional", you find that you AREN'T able to communicate
civilly, despite your stated "purpose" in this forum of "...only (being) here
to >>civilliy<< [your words] debate the Morse Code test issue"

Again a liar...this time acknowledged and publically proclaimed.

> Apparently NONE of us can have any views different from the noble,
> blue-blood (mostly cyanotic) "qualified" morsemen views of the
> higher archy in this newsgrope. All those who are against the higher
> archies of here express "hatred" for "all of amateur radio" by speaking
> out against the gunnery nurse. Tsk.

Sure you can.

You just don't have to be antagonistic and profane to do it....Well, let
me restate that...>>WE<< don't have to be...YOU have a problem with maturity,
other than the chronological version.

>> Lennie has, on several occassions, posted stuff which >>I<<
>complimented
>>him on and even thanked him for.
>
> "Always." Or, in his own words -
>
> "BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
> AHAHAHAHAHAHAHAHAHAHAHAHAH!!
>
> Putz! Putz! Putz"
>
> [nursie seems to have a fondness for penises...?]

For my own, yes thanks.

I am sure you would too if you had one, Lennie.

Or maybe that's why there are no Little Lennie's running around...You DID
have a fondness for them, putting yours in places where procreation was
unlikely to occur...?!?!

>> His ususal repsonse is to just open the wounds a bit more an make me
>>regret having been civil to him.
>
> Poor baby. Still suffering open wounds? After all these years?

No wounds, Lennie. Observations.

> Seek medical help. It isn't far away. Forget trying to treat it by
> yourself...you aren't licensed to practice medicine on your own.

I am closer to practicing medicne than you are psychiatry or operating a
radio transmitter under your own station license and operator permit.

>> The post I am responding to is clear evidence of YOUR own efforts to
>>spread that flame war.
>
> Poor nursie. Thinks he is the only one who can snarl, rant, and
> rave in "freedom" and be immune. Nursie has mental immune
> disorder/deficiency.

As I was saying...

STILL waiting on your documentation of psychiatiric education and
licensure, Lennie.

(Don't blush, Lennie...WE know you have neither but still try to ACT like
you do...there's a LOT of things yo9u do we see right through!)

>> Humiliating to get caught with your hand in the jar again, isn't it,
>>Brian? When will you learn?
>
> The only "humiliation" is nursie being the walking wounded,
> stumbling along, looking in mirrors and calling all others by what
> he sees in those images.

I am sure you wish this were true, Lennie.....Too bad for ya, Putzie!

> An example of the NEW U.S. ham radio. An EXTRA being the
> role model of ALL amateur radio.
>
> Nursie's major output in here is one-sided, hisself and his
> obsession of hatred of a few others (who only disagree with him).
>
> Not at all on the original subject of this thread. Everything to
> nursie is his own hatred of a few. Poor thing.

The "poor thing" here is a wasted old man who never lived up to all the
things he THOUGHT he could be or should be...Unrecognized by his peers for his
PERCEIVED accomplishments, none of which ever added up to more than a few
articles published in an Amateur Radio magazine that itself was a flop.

Now relagated to lashing out against those who HAVE chosen to pursue thier
interests, even though he could himslef be a part of the fun...Still standing
out in the rain, nose pushed up against the glass, watching those inside dry
and having fun, just too cowardly to take a couple steps to the right and open
the door..........

Putz.

Please remind me of what level of Amateur Radio licensure you hold,
Lennie..!?!

How long have you held your airman's certificate...?!?!

Not to forget what licensure and certifications you hold in
healthcare...?!?!

How many babies you've delivered?

How many codes you've successfully converted and saw to walk out of the
hospital...????

Yes, Lennie, please tell of of all YOUR accomplishments....(As if we don't
know about your 1950's Army "career" by heart already...)

Tell us again how many things you've ALMOST accomplished, Lennie...Like
how you ALMOST live in an $800K gated community...?!?!

Putz.

You truckers really need to get back on the interstate highway and
give up trying to be comedians. What is an 8 person 50?

Somebody wanted to know about the Radio Endorsement on
your CDL. The Radio Endorsement on your CDL will allow
you to operate on Freeband, Ham Radio, CB, FRS, and company
trucking frequencies. Not a bad deal! Study guides for the
Radio Endorsement are sold at most interstate truck stops.

Exactly....its hear from me for several months, then come out with his toys,
maybe locate, if lucky turn in a report, wait a few more weeks, if lucky,
and find it may have did some good (usually not). Repeat.

All they really have to do is come out here and go to the area my six meter
beam points to, the same area that has all the bad insulators in the past,
and change every one out. Will they do that? of course not.

>on ANY list that I am aware of that labels it a prfanity.

"prfanity?"

Nu? You never were with any Yiddish speakers? Tsk, tsk.

"Putz" is a pejorative in Yiddish refering to a penis...used as in
someone thinking with the head of their penis, not their brain.

>> You are losing your touch, gunnery nurse. Straighten the brim on

>> like a good corpse gunnery nurse.
>
> No swagger here, Lennie.

Lost your swagger stick, gunnery nurse? :-)

No wonder you looked out of uniform! :-)

> I am not the one who suffers from an inability to tell the truth or needs
>to embellish my career with false accomplishments to cover up some
>mediocrity.

Sorry, nursie, but that description fits you to a tee.

You pretend to be a medical doctor with all sorts of specialties.
You pretend to be the big pilot in a "service" yet you've probably
never ever paid for a tank of avgas out of your own pocket.

You've claimed to be the hotshot communicator with that "amateur licensure" yet you've never ever done any military or commercial communications...and your social communications are nil, confined to denigrating anyone who doesn't agree with you.

>> Learn some more Yiddish and the way to use it. Oy, gevalt!
>
> Do it yourself, Lennie....While you're studying for your Amateur
>license.

Why should I do that? To be Just Like You?!? No, sorry, such a role model is out of the question.

Try to get back to the general subject threads instead of insisting on making your own obsessive hatreds the main point of every thread.

Yes, yes. Your PUTZ is bigger than anyone else's.

Is it so big you have LICENSURE for that Putz, too? :-)

Do you know anything about fields and waves, Dr. Strangelove, or do you erect your Putz whenever you need a quarter wave at 40m?

Doncha all just LUV these technical discussions on antennas?

:-)

>
> As I was saying...
>
> STILL waiting on your documentation of psychiatiric education and
>licensure, Lennie.

No problem. You show us YOURS, Dr. Strangelove. Remember,
you be a NURSIE, not a REAL physician or shrink.

I take that back on the shrink. Your shrink-wrap may be too tight.

> (Don't blush, Lennie...WE know you have neither but still try to ACT like
>you do...there's a LOT of things yo9u do we see right through!)

All your personalities still don't have "licensure" in psychiatry,
Dr. Strangelove.

When are you going to discuss the thread subject of "question pool
versus book learning?" Never? Okay, you've worn out your obsessive
hatred of certain others in this thread. Time for you to segue to another
thread and act as nuts. No problem.

>>> Humiliating to get caught with your hand in the jar again, isn't it,
>>>Brian? When will you learn?
>>
>> The only "humiliation" is nursie being the walking wounded,
>> stumbling along, looking in mirrors and calling all others by what
>> he sees in those images.
>

>things he THOUGHT he could be or should be...Unrecognized by his peers for his
>PERCEIVED accomplishments, none of which ever added up to more than a few
>articles published in an Amateur Radio magazine that itself was a flop.

Now now. :-) Nursie is frothing at the mouth again. Tsk, tsk.

You are a "wasted old man?" Tsk, tsk. Such self-loathing and shame.

Poor baby. You never got all the recognition you "rightfully" deserved,
either, especially the "licensure" as an amateur extra. Tsk.

So, Stevie, which magazine did you write for? :-)

> Now relagated to lashing out against those who HAVE chosen to pursue
thier
>interests, even though he could himslef be a part of the fun...Still standing
>out in the rain, nose pushed up against the glass, watching those inside dry
>and having fun, just too cowardly to take a couple steps to the right and
>open the door.....

Wow, you DID get some wrong meds there! Flip-out City complete
with air-miles credit!

Sorry, but you've just not been paying attention to reality in here.

> Putz.

Yes, yes, your Putz is bigger than everyone's...quit waving it around.
Nobody cares but the puss from the end of it is splattering and
causing a mess in here...

>> You still can't make it on your own...
>
> Please remind me of what level of Amateur Radio licensure you hold,
>Lennie..!?!

:-) Big fnorts on "licensure" coming...

> How long have you held your airman's certificate...?!?!

Is this now a "private pilot" newsgroup? :-)

> Not to forget what licensure and certifications you hold in
>healthcare...?!?!

Ah, so this is ALSO a "healthcare" newsgroup! :-)

> How many babies you've delivered?

Ah, ALSO an ob-gyn-pediatrics newsgroup?!? Oh, my.

So, digitize your paperwork on delivering babies, Dr. Strangelove.

You are licensed - excuse me - HAVE LICENSURE as a
physician, haven't you? :-)

> How many codes you've successfully converted and saw to walk out of the
>hospital...????

None of my "codes" ever walked out of hospitals. Have written several computer source codes, though, and four of them are freeware on the 'Net. That compiled code doesn't "walk," but runs on its own. :-)

> Yes, Lennie, please tell of of all YOUR accomplishments....(As if we
don't
>know about your 1950's Army "career" by heart already...)

Poor nursie. I did it. I have the proof. I have witnesses who are also
radio amateurs and one was there at the same time I was.

You never did that. Tsk.

> Tell us again how many things you've ALMOST accomplished, Lennie...Like
>how you ALMOST live in an $800K gated community...?!?!

I've lived at this address for 41 years. The gated community (all of 44
houses) got built two years ago. [it is adjacent to my property]
Those new homes sold at starting prices of $400K+ on 1/5 acre sites.
[I have 1/3 acre] There's no "almost" about that. :-)

I had a 24-year mortgage in the beginning of this house ownership but
it got paid off in 20 years. No liens here. If I sold it tomorrow it could
be done for about a quarter of a million dollars...based on the sell price
of one house down two doors from me a few months ago.

But...this isn't the Real Estate newsgroup, is it, Dr. Strangelove?

You want to misdirect everything into your own obsessive need to
"get" certain others...and to heck with any subject thread. :-)

The only thing bothersome about such misdirection is that I've already
DONE things in radio and electronics, including a whole career in that
and now don't have to answer to anyone who wants to play Snoopy
the WW1 air ace or Dr. Sttrangelove of the ER and Obstetrics.

> Putz.

We all know you PUTZ is bigger than average. So? :-)

It must be remembered that electrical engineering is a very wide field covering
a lot of subjects. Often someone who is expert in one area knows very little
about another area. Someone can know all about semiconductors yet be at a
complete loss about how, say, induction motors work.

The really odd thing is that they would send someone like that to deal with an
interference issue.

>>>My next step was a letter to the FCC and
>>>the Public Service Commission.

Hey Len. Betcha he calls you a Yiddish word meaning "penis." He
acuses others of homosexuality and pedophilia, but all he appears to
think about is the male appendage. Kind of funny, in a sick sort of
way.

Len, it's enough to see that he tries to expand his knowledge, even if it is to learn only the most vulgar words of various languanges. And it's enough to see the Rev Jim and Mike sign off on it.

Steve is like a dry socket - he refuses to heal. Demands compensation
for all his suffering. The cure is to scrape it open and try again.

> > So do you.
> >
> > The post I am responding to is clear evidence of YOUR own efforts to

There is no such endorsement -- the FCC (not the USDOT) has jurisdiction
over radio communication in the US. CB and FRS *might* be considered
"freeband" since the licensing requirements were eliminated decades ago.
However, there are regulations still that apply to transmitter power, mode,
frequency control, etc for those services.
The FCC still requires operators of transmitters in the amateur bands to
hold valid amateur radio service licenses. Thus, it is not "freeband".

Bryan
Amateur Advanced Class (1970)
General Radiotelephone Operator (1975)

For those who're Morse-challenged... "Perhaps because CB radios are used
more on the trail when you are offroading than any of the ham frequencies?"

I'd agree with that, OM. Moreover, it'd be a bit too hard to use the old
Vibroplex whilst jumping stumps!

What group are you posting from? Certainly not a trucker group or you
would know just how stupid you sound. The CDL Radio Endorsement
has been around for years and allows wide use of the spectrum, to include
freeband, ham bands, & many other frequencies. Wish you "amateurs"
would get a clue.

Please don't tell me you're driving one of them big old trucks down the road. First place there is no such thing as freeband. It is a term used by those not authorized to use a certain frequency. A CDL Radio Endorsement just means you have passable english and are authorized to use the Frequencies associated with your carrier. It damn sure doesn't give you open use of the Ham frequencies. "amateurs" ..... reminds me of the saying which is something like "amateurs build the Ark, professionals built the titanic". You sure proved that point....

Jerry

I don't think it is funny. More pathetic than anything.

He thinks the amateur radio "licensure" is something more than
a Nobel in Science or something.

He uses the word "licensure" wrongly, but will be angry (more
than usual) on trying to correct him. [against his gunnery nurse
"authority"] He has a U.S. amateur radio LICENSE but NOT any
"licensure" in radio. If the FCC wanted to use "licensure" they
would not use that for amateurs. The FCC doesn't use that term.

>trouble with? Or both? Maybe he actually chose the Corp, but...
>why's he in a pseudo-A.F. uniform now?

Doesn't matter much as long as its a UNIFORM! :-)

Therein lies his power of being. Cut off the uniform and you cut off
his power.

Uncle Sam paid for all his avgas and learning time some time ago
and now he is trying to imply that it was all "his own effort" at
becoming the mighty flyer "licensured" in the pseudo Air Corps.

>I have no idea where the Yiddish stuff comes from. Turette's Syndrome
>in a foreign language?

In Stebie's case it is "turret syndrome" as in Gun Turret. Like
his gorilla warfare pack SGC SG-2020 where he was trying to
get a Real military handset. He wanna play sojer in da woods.

Stebie da Wunderhamme probably came across a Yiddish phrase
website (by accident), one of several that have such phrases. :-)

It's "okay" to cuss in a foreign language according to some. That
way they can get their cojones emptied and have that "socially
acceptible" behavior. :-(

Careful Brian. Stebie da gunnery nurse may be "picking up the
phone" again to "have us committed!" :-)

Dr. Strangelove is a "professional healthcare" person ("Licensured"
and everything) who has "contacts in other states" to be able to
"commit anyone." Too bad he doesn't have the guts to commit
himself. It would save a lot of wasted effort in here just to skip
over his postings.

I missed fresh postings after the 25th of July, forgot how this
particular thread got started and what the original subject was.
No matter. Stebie da gunnery nurse will jump in with another
rant, rave, and yell-yell about hisself and us two, plus maybe
Dieter and those other pseudonimians posting (or cross-posting)
in here. Every thread seems to grow Stebie's postings. Like a
fungus. :-)

Too bad he can't learn some of the vulgar basics of electronics
and radio. That would be more fitting for his "service days" in
the U.S. ham raddio corps "licensured" as a super-duper doper
of a morseman.

>And it's enough to see the Rev Jim and Mike sign off on it.

There is that. Nice and fitting seeing as how Stebie da gunnery
nursie is trumpeting hisself as a U.S. ham radio role model (any
perceived insult of nursie is an insult against all of ham radio
according to him). :-)

Sorry, Lennie...

Paid for ALL my licensure flying myself...have paid for all my
flying since then too, except when on a USAF funded mission. My
Private Pilot's license was issued in Aug 1974. I went to boot in
Sept 74.

As for "psuedo Air Corps", what are you talking about? There's
nothing "psuedo" about anthing, other than YOUR alleged interest in
radio.

BTW...I am not "licensured" in any "pseudo Air Corps".

That "licensure" is via the authority of the Federal Aviation
Administration.

I am sure you know where/how to verify that.

Bingo!

There's your economic considerations of BPL.

>BPL is a hard-wired
>very localized system with toxic side effects. A single Wi-Fi node can
>serve dozens of users simultaneously over some pretty big areas
>without any wires. Huge pluses vs. BPL.

Exactly.

Here's another plus: A lot of Wi-Fi hardware is already out there, with more on the way. "Wireless" networking (meaning radio) is all over the place - they're practically giving the things away at Microcenter.

>Most of this country's major airports have Wi-Fi nodes ("hot spots").
>Drop into yer seat in the podium areas, fire up the laptop and catch
>up with your e-mail or whatever. Sixty bucks for the modem and yer
>online. And they're already on the shelf and in use. Ditto the
>Starbucks stores, truck stops, etc.

And *one* Wi-Fi modem does the job in all those places....

>It doesn't take much of a stretch to imagine that the basic technology
>can be deployed over huge swaths of users at low installation costs.
>One inexpensive little black box up a pole per block or on cell phone
>towers in urban and suburban neighborhoods, etc.

Already happening.
>
>> and if one would offer much better service than the other,
>> then it would be foolish to spend any money on the turkey.

Economic considerations. You'd think the "professionals" who are involved in pushing BPL would know all this...(we've been told that "Professionals Get Involved"...)

>Wires for any type of communications purposes are already on their way
>into history.

Yup. Fiber for longhaul, UHF radio for short haul terrestrial, HF for fun and backups.

>BPL was stillborn from the gitgo.

It ain't over till it's over.

Glad you've finally accepted the truth.

> Do you know anything about fields and waves, Dr. Strangelove, or
> do you erect your Putz whenever you need a quarter wave at 40m?

I dare say that I've erected more antennas than you ever have or
will, Lennie...And yes, I am very familiar with "fields and waves"...

> Doncha all just LUV these technical discussions on antennas?

To what practical ends would ANYone engage you in a discussion on
antennas, Lennie...?!?! You won't carry on a civil conversation on
ANY topic, so why start a completely NEW topic for you to be abrasive
and crude in?

Like dozens of posts before, you'd launch into yet another thesis
length dissertation that no one except you cares about for the same
purpose you "wrote" for "Ham Radio" magazine...You couldn't get
"professionally" published, so you find the next best alternative.

To that end you excel.

And since we are "amateurs" and you deem yourself an "engineer",
we should (in your estimation) bow and pay homage to you.

THAT ain't happening.

You have no practical experience in ANY Amateur Radio program or
applicaitons. None.

Any "technical" knowledge you think you can impress us with is
available via Google or any other decent search engine. That you have
mastered cut-and-paste techniques in order to swamp the NG with your
"brilliance" impresses no one but you.

So...the door's open..you go right ahead. We'll just step over
you while you roll around.

1590. FCC Office Testing History

Newsgroup: rec.radio.amateur.policy
Date: 2004-08-04 16:54:51 UTC
From: N2EY@AOL.COM
Message-ID: <c2356669.0408040854.7c1e1091@posting.google.com>
Source record: 95166

Remember when "we all had to go to the FCC offices to take ham exams
in front of a genuine steely-eyed FCC examiner"?

I recently came across some numbers about those bad old days:

From the Spring 1968 Callbook (one of the first editions to show
license class):

279,905 individual licenses (not club/military/RACES etc.)

Novice 12,467 4.5%
Technician 63,393 22.8%
Conditional 42,825 15.3%
General 116,005 41.4%
Advanced 39,040 13.9%
Extra 5,875 2.1%

Total General/Advanced/Extra: 160,920 (57.5%)
Total Cond/Tech/Novice: 118,985 (42.5%)

Back then the Conditional, Technician and Novice were given "by-mail",
proctored by a single volunteer examiner. The Conditional was a "by-
mail" General, and required that you live a certain distance from an
FCC exam point. The distance was 125 miles before 1954, 75 miles from
1954 to 1965, and 175 miles after 1965, measured "air-line" (meaning
straight line on a map, not how far you had to drive on a road).Novice
and Technician were normally "by-mail" regardless of distance to an
FCC office. Some Technicians got their licenses at FCC offices,
usually
as a result of not quite passing 13 wpm code.

What I find most interesting is the high percentage of "by-mail"
hams in those days - more than 40%! Even if we allow that a
significant percentage of Technicians were FCC-office-tested,
we still have well over 1 in 3 hams of those days with "by-mail"
licenses.

There's also the fact that in those times the Novice was a one-time,
2 year nonrenewable license. After the 2 years were up you either
upgraded
or left the ham bands.

Also interesting is the distribution by license class.
The low percentage of Advanced and Extras is due to the "Great
Giveaway" of December 1952, when all US hams except Novices and
Technicians got full privileges. The "incentive licensing" changes
of 1968 and 1969 would change that...

For comparison, here are the numbers from the beginning of this month:

As of August 1, 2004:

675,532 individual licenses

Novice 30,809 4.6%
Technician 262,659 38.9%
Technician Plus 57,932 8.5%
General 139,277 20.6%
Advanced 79,264 11.7%
Extra 105,591 15.7%

Total Novice/Tech/TechPlus - 351,400 (52%)
Total General/Advanced/Extraall classes - 324,132 (48%)

From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <411124DD.3070007@ix.netcom.com>
Source record: 95173

Wi-Fi "nodes" need the same cable or
> fiber optic feeds as BPL does but then the costs of implementation go
> 'way down below the costs of implementing BPL. BPL is a hard-wired
> very localized system with toxic side effects. A single Wi-Fi node can
> serve dozens of users simultaneously over some pretty big areas
> without any wires. Huge pluses vs. BPL.

I think we are in agreement. The costs of the feed would be the
same, the costs of the "modems" would be similar. The big difference
is that Wi-Fi should be able to handle much more bandwidth in the part
between the individual Wi-Fi "modems" than the part between BPL
"modems". Both use either the existing slice of radio spectra
(somewhere up in the microwave bands) or existing power wires.
But that would leave out laptops running off batteries (unless
BPL fesses up to being a radiator and that laptop actually
transmits a signal thru an antenna to be picked up by leaky
nearby power wires being fed by a BPL system, and visa versa.
Then the entire camel gets into the tent...).

Wi-Fi is already "on the shelf" vs BPL which would have to
charge more to pay off the development costs, or the providers
would have to front a huge investment that may never pay off.

>
> Most of this country's major airports have Wi-Fi nodes ("hot spots").

> One inexpensive little black box up a pole per block or on cell phone
> towers in urban and suburban neighborhoods, etc.

Supposedly one inexpensive BPL box on a neighborhood power pole is
the equivalent. And every user needs a BPL "modem" as well. These
would cost about the same as Wi-Fi and offer inferior service.

I wonder what the ratio of newbies/ OFs were back then vs.
today. If anything really is that different. The total
numbers seem to have increased faster than the general
population has, in terns of %.

> FCC office. Some Technicians got their licenses at FCC offices,
> usually
> as a result of not quite passing 13 wpm code.

As was pointed out in a recent thread, the tech license some
years was a "trap" of sorts in that you gave up the novice
bands and thus "out of touch" with the HF world. Why the FCC
wanted people to go either HF or UHF but not both isn't clear
to me. It would have made more sense to say "techs get their
allocations plus those novices get". Which the FCC eventually
did.

>
> What I find most interesting is the high percentage of "by-mail"

Wonder how much cheating may have occured, if there was only one person as the "VE" proctoring the FCC written tests. Seems that the current VE system would be more secure. Though someone who cheated to get a ham license won't be as serious a hazard as say someone who cheated on medical exams to become a doctor.

In 1998, if you had a Radio Endorsement on your CDL, you were
exempted from radar dectector laws. That is why you saw more
truckers studying for the CDL Radio Endorsement.

>> do you erect your Putz whenever you need a quarter wave at 40m?
>
> I dare say that I've erected more antennas than you ever have or
>will, Lennie...And yes, I am very familiar with "fields and waves"...

Tobacco fields and waves of grain, perhaps.

But not even close to Biot and Savarts' Law. I doubt you've even
once actually used method-of-moments in an analysis program.
Have you linked to www.antennex.com yet?

Yes, we are all sure you have memorized the magic number of
"468" so that you can assemble the proper length of a half-wave
dipole. [lots of smarts needed for that, huh?] But, why is that
number that value and why isn't it a bit larger? Hmmm?

So...what was your military experience with NVIS? Did you do
much communicating with the murine radio set in a Hummer?
Get lots of QSLs with those bent-over whip antennas?

>> Doncha all just LUV these technical discussions on antennas?
>
> To what practical ends would ANYone engage you in a discussion on
>antennas, Lennie...?!?! You won't carry on a civil conversation on
>ANY topic, so why start a completely NEW topic for you to be abrasive
>and crude in?

I have NO trouble talking about REAL antennas with REAL people.

I have lots of difficulty talking with wanna-be "experts" whose entire
experience in "antennas" is reading about them or using commercially

available wire antennas for HF only...or memorizing buzzwords of
"famous antenna names" read in QST or the ARRL Handbooks. :-)

Half-wave dipoles aren't the only kind of HF antenna, Stebie. Nor is
the "G5RV" the "best" of all possibles. Proper matching to whatever
is erected is important to get the most RF power output into those
fields and waves.

The first automatic antenna tuner built into portable-mobile military
radio sets was done by Collins Radio for the USMC T-195, circa
1955. The present-day manpack land-forces HF radio is the AN/
PRC-104 (designed, built by Hughes Aircraft Ground Division) which
has a built-in automatic antenna tuner (little box to the right of the R/T).
I'm sure you've "used" those before, haven't you? I have. :-)

> Like dozens of posts before, you'd launch into yet another thesis
>length dissertation that no one except you cares about for the same
>purpose you "wrote" for "Ham Radio" magazine...You couldn't get
>"professionally" published, so you find the next best alternative.

Tsk, tsk. Something troubling you, Stebie da gunnery nurse?

I wasn't bringing that up. Why are you bringing up some more
nastiness at the good folks who stayed in independent publishing
for 22 years with an amateur-radio-oriented monthly?

Do you also hate Jim Fisk (SK)? Skip Tenney? Alf Wilson?
Rich Rosen?

> To that end you excel.

I don't have full Excel, just the Reader. :-)

> And since we are "amateurs" and you deem yourself an "engineer",
>we should (in your estimation) bow and pay homage to you.

I do? I don't think so.

I don't "deem" myself an engineer, I've been redeemed with a regular
salary for doing that for years.

Sunnuvagun! How about that?

> THAT ain't happening.

Oh, but it most certainly DID happen. In reality.

> You have no practical experience in ANY Amateur Radio program or
>applicaitons. None.

Actually, I do, but that is not on your "admit it" list. :-)

You are too too busy denigrating anyone who disagrees with you.

> Any "technical" knowledge you think you can impress us with is
>available via Google or any other decent search engine.

The Internet went public in 1991. I got first engineering design responsibility in 1960 (Micro-Radionics, Inc., 14833 Oxnard St., Van Nuys, CA, group manager was Stan Wolf, a ham) . Never stopped doing such engineering since that time.

>That you have
>mastered cut-and-paste techniques in order to swamp the NG with your
>"brilliance" impresses no one but you.

Hardly. :-) Although I must admit that, to those with very little theoretical knowledge, ordinary theory applications may look a lot like some kind of black magic. :-)

It's a trivial task to memorize the formula for resonance of an L-C circuit: f = 1 / (2 pi Sqrt (L C)); f in Hz, L in Hy, C in Fd. Reactance of an inductor is: X = 2 pi L; reactance of a capacitor is: X = 1 / (2 pi C); X in Ohms, others in same units as resonance. "2 pi f" is also called the "radian frequency" and noted by the Greek lower-case letter Omega.

I memorized those over a half century ago. Not a problem then. Memorized a lot of other formulas and facts a long time ago. If there is any uncertainty, I know where the book references are (with over 30 lineal feet of text books in the home office that is no problem).

All basic stuff of radio and electronics, Stebie. "Google" not needed, Internet not needed, nor any "cut-and-paste skills." If you did that kind of thing for a living, you might know it, too, but you don't. You read QST and get high on the ads and then come in here and snarl, spit, rant, and yell-yell at those of us who DO know and DO have experience in radio.

> So...the door's open..you go right ahead. We'll just step over
>you while you roll around.

What in the world are you talking about?

Did your personalities have some kind of binge again, thinking up imaginary scenarios in a group grope?

Funny how a google search for the exact term "CDL Radio Endorsement" comes
up with exactly ZERO hits. Neither did spelling out CDL.

One of the longest threads in months just 'cause a guy doesn't want a ring
on the roof of his truck. <g>.

See http://skyandtelescope.com/news/article_1317_1.asp
It say that the probe will have an antenna 40 meters long,
but it doesn't say if it's a dipole or what. If a dipole,
then it'd be 80 meters. I don't think that we need worry
about QRM from it here on Earth... :-)

MOre info at
http://www.marsis.com/index.php3?page=instrument_description.php3
it will operate between 1.3 to 5.5MHz at 15 watts peak. Not
likely to QRM us here on Earth at all...

It's also going to probe Mars' ionosphere as well. Martian hams
of the future may have fun chasing Martian DX like we do here on
Earth...

Well..it's like this for some of us. I myself have a General Radio Telephone License, call sig PG GB 00077, which requires CW at 35 wpm to qualify. I also have a Ham no code tech license, call sign KC0OEB which can be looked up on qrz.com. My point is this, arrogant loud mothed s.o.b.'s that go about badmouthing other hams need to have their heads bashed in and their license's taken away.

I expressly decided on the no code tech for the very reason that is happening here. Scum like you inhabits the hf bands very predominantly, and need to set a good example, instead of taking each and every opportunity to prove to me and the remainder of the world exactly what a total jackass you can with a little effort.

So, from now on it might be to your benefit and others as well to be very carefull with your critisims or one day you may find your sorry ametuer ass being kicked really hard by someone that is ABLE to blow your ass away in the electronics field. My advice to you: shut you pie hole, asswipe.

> have to do with amateur radio?

Don't know about gereral aviation, but I once had a QSO with a
ham who was flying a comercial jetliner at the time, on HF.
Wonder if the airplane's wings are used as a dipole antenna...

Hey, that's not QRM, that a chance at good DX.

There's that cup waiting for the first ham to have a contact with
Mars, that was set up back in the thirties. I can't remember if
it requires to way communication, or merely receiving will work.

For that matter, maybe it specified communication with Martians,
rather than communication with a station on Mars.

>>
>I wonder what the ratio of newbies/ OFs were back then vs.
>today. If anything really is that different.

Back in the '60s it was common to meet hams who had been active since the '20s. Ops who had done spark (which was pretty much gone from ham radio by 1924) were still quite numerous, and most were only in their '60s or '70s. Somebody with 30 years as a ham went back before WW2, etc.

Best gauge is to look at the growth numbers (all of the following are rounded off but accurate to within a few percent):

1930: US population 122 million, US hams 18,000, 1 ham per 6778 Americans

1940: US population 131 million, US hams 50,000, 1 ham per 2620 Americans

1950: US population 150 million, US hams 90,000, 1 ham per 1667 Americans

1960: US population 179 million, US hams 230,000, 1 ham per 779 Americans

1970: US population 223 million, US hams 270,000, 1 ham per 825
Americans

1980: US population 227 million, US hams 350,000, 1 ham per 649
Americans

1990: US population 249 million US hams 550,000, 1 ham per 453
Americans

2000: US population 281 million, US hams 683,000, 1 ham per 411
Americans

>The total
>numbers seem to have increased faster than the general
>population has, in terns of %.

Yep. Except that we're now at about the same place in total numbers that we
were before the restructuring of 2000.

>wanted people to go either HF or UHF but not both isn't clear
>to me. It would have made more sense to say "techs get their
>allocations plus those novices get". Which the FCC eventually
>did.

The reason is this: FCC had a particular purpose for the Technician, which they
tried to get ham radio to accept. FCC did *not* see Technician as a step
between Novice and General back then. Rather, they saw Tech as a
special-purpose license meant for those not interested in HF or manufactured
equipment.
>

>
>Wonder how much cheating may have occured, if there was only
>one person as the "VE" proctoring the FCC written tests.

Nobody knows. I personally do not know of any. But I have always lived in
places within the "Conditional distance". Cheating for a Novice was
counterproductive because you couldn't renew it.

I do recall that when a rumor circulated that the Conditional was being phased
out and that holders of that license would have to retest, there was an
enormous hue and cry from Conditionals - even the ones only a few miles from an
FCC exam office. (Theretest part of the rumor was false - FCC wanted to

eliminate Conditional by simply renewing them as Generals).

And it did seem like there were an awfully large number of Conditionals living close to FCC exam points.

>Seems that the current VE system would be more secure.

Yep. Yet even that system has its problems. Fortunately they are very few, given the huge volume of hams who have used the system.

And one thing is sure: With the growth in the past 20 years plus the number of non-FCC-tested hams 20 years ago, plus normal attrition, it's pretty clear that most hams today were not FCC tested.

>Though someone
>who cheated to get a ham license won't be as serious a hazard as
>say someone who cheated on medical exams to become a doctor.

Sort of. Cheating your way to an MD would require cheating on a lot of exams, not just the few required for a ham license. And you cannot get an MD based on exams alone; there's a lot of practical work required too - internships, residencies, fellowships, etc.

It should be remembered that misoperation of a ham transmitter could result in all sorts of trouble for other services. Not just BCI, either. For example, compute the fourth harmonic of 10 meters, and remember this was a time when it was common for hams to use homebrew and modified-surplus transmitters.

FCC also took the "ready reserve of trained operators and electronics experts" pretty seriously too. Hopefully they still do.

>This looks like a problem from Discrete Mathematics. To me it appears to be >a specific problem in finding what is called the minimum "Spanning Tree" for >a graph. For your problem the graph vertices would be the cities visited and >the distance, or what ever you want to minimize, assigned to the edges >connecting the vertices together.

(snip of excellent discussion)

Yep, that's it!

Two properties emerge from the problem that are of interest in the discussion with Steve, K4YZ:

First, it can be shown that the only way to find the minimal-length solution for all possible values of intercity distance/time is to look at each and every possible unique route. (You can eliminate half the routes as being identical except for direction, which is immaterial if all you want is minimum distance or time)

Second, the number of possible routes grows as factorially.

Third (and this is the point of the exercise) the number of routes with even a moderate number of cities is so enormous that they cannot all be evaluated in a 'reasonable' time, even with the most powerful computing system imaginable. This means there *is* an answer, but we cannot find it.

Example: With 10 cities, the number of routes is 3,628,800. Half of that is 1,814,400. A trivial computation for a computer.

But look at 60 cities: 4.16 x 10e81 routes! If we have a computer capable of 10e10 routes per second, it takes 4.16 x 10e71 seconds to find the solution. Since there are approximately 31 million seconds in a year, (3.1 x 10e7) the result is over 10e64 years! If we massively parallel 10e10 computers, the solution still takes 10e54 years.

The Elser-Mathes Cup is to be awarded to the first hams who establish two-way
amateur radio communication between Mars and Earth. It's been waiting since
1926.
>
>For that matter, maybe it specified communication with Martians,

It's rare that they actually come to his defense, and the recent Mike
rescue was really suprising. They usually just ignore his bad
behavior - giving him a pass.

You may want to re-read your own posts with an open mind. You come across as a whiny crying bitch. Just because there is no reference anywhere to a CDL radio endorsement you seem to be offended. Is it because you were duped into paying extra for an endorsement that means nothing to anyone except yourself? You must have graduated at the top of your class. One of one.

Wonderful! Some "state-of-the-art" to shoot for in hamme raddio!

What mode ya gonna use, Jimmie? Besides break-in "cw," that is?

Instant, quick QSO-ing with Mars? Ever figure the distance at
shortest and longest paths?

Who gonna handle the QSLs to confirm contacts? :-)

>>For that matter, maybe it specified communication with Martians,

>Don't know about gereral aviation, but I once had a QSO with a
>ham who was flying a comercial jetliner at the time, on HF.
>Wonder if the airplane's wings are used as a dipole antenna...

No. If you examine the Boeing 707 family, you will probably
find that the vertical stabilizer (the stationary part of the "rudder")
is partly insulated to act like a vertical antenna. At least that's
how I remember it on the last trip to Renton, WA.

Over-ocean flights still use HF SSB for communications. The
usual procedure for an HF antenna is to literally insulate some
stationary part of the airframe and make that the radiating
element.

Wings be restricted to holding the engine pods, controls, flaps,
etc., plus some of the jet propellant tankage. Not a good idea to
disturb the essential lifting capabilities of that part of structure!

>Hi, hi.

Watch. :-) He gonna Yell-Yell about that, misdirect, and generally
be a PIA on it.

Typical response will be that one "must go to Google and cut-and-
paste a particular post or posts" in order to make a point. That
being a lot of labor for exactly NOTHING in that the demanding
party doesn't or won't acknowledge that posting. The demanding
party just wants others to waste their time in looking and cutting
and pasting. Old trick of misdirection.

Folkses usually have memories of their own. We readers all know
what is repeatedly said, phrases used, etc. Those that Yell
"I never said that!" (more or less) are just trying to bluff their way
out of a corner they got boxed into.

Nobody was tested "by mail".

They were tested by volunteer examiners (as are virtually ALL of todays applicants --- what goes around, comes around) who just happened to obtain the test material through the postal service.

Sunuvagun!

I think the distinction was that the proctor wans't supposed to look
at the test itself, but just watch the candidate take the test and
attest that he didn't cheat, then have the candidate put the answered
test back in the envelope and the proctor signs off on the envelope or
some such. The proctor wasn't supposed to grade it or anything, and
the appicant wouldn't know if he passed untill some weeks later by mail.
I'd call that "testing by mail". Today, the VEs give the tests, grades
them, tells you if you passed or not, and then tells the FCC that you
passed everything to get whatever level of ham license.

>Nobody was tested "by mail".

I got the term from the ARRL License Manual. That's how they describe the volunteer examiner process.
>
>They were tested by volunteer examiners

One (1) volunteer examiner was required - as opposed to a team of at least 3 Volunteer Examiners today.

>(as are virtually ALL of todays
>applicants --- what goes around, comes around) who just happened to
>obtain the test material through the postal service.

The postal service was an integral part of the process. The volunteer examiner had to send a letter to FCC requesting test materials, which then came by mail and were returned by mail in sealed envelopes.

>Sunuvagun!
>
Those volunteer examiners did not prepare or grade the written exams. They simply proctored the exam, certifying that the examinee did not get any help.

Yes, some volunteer examiners would look over a written test and give an unofficial pass/fail opinion. But it was FCC that graded the exams.

And the main point remains: The percentage of US hams back then who did not face the steely-eyed FCC examiner was quite high. I'm pretty sure that in some parts of the country, "tested by mail" hams were the vast majority.

Not that there's anything wrong with that!

Now that is funny, coming from a trailer park dwelling high school
drop out. The radio endorsement on the CDL is free, as it
is considered a public service. You would have known that, if you
researched it before you shot your ignorant mouth off.

That is an outdated link, and you were told by several people that
the information on the CDL Radio Endorsement is found on the
EPA web site. Do you want me to do everything for you?
Next, you will want someone to take the test for you.

> "stations" and "operators"?

In Japan, the actual station is different than the operator. Many operators haven't space for a station. It would be somewhat similar of a ham in the US going and operating his club station. Here in the US, clubs that have stations, have a separate call sign for that station. A club member is allowed to operate that club station under either his/her own call or the club station call.

Also since the Japanese license is a lifetime license, it requires some care to deduce what is happening in Japan. The lifetime license aspect of it will cause the illusion that the ham population is growing since the new is simply added to the never expiring old. Instead one needs to look at things like the rate of increase of decrease of new license issues, estimate the number of licensees that have become silent keys based on general population statistics, the number of members that the national radio society has, etc.

Roll forward a few decades and today the same FCC is hyping BPL. Don't
look for logic in any of it, there isn't any, they'll drive ya
silly-bonkers. Sometimes I feel that the fact that ham radio still
exists today is something of a regulatory anomaly.

Simply a matter of population distribution vs. FCC field office locations. Here in the Boston - D.C. strip "by-mail" licenses were curiosities. In places like the Dakotas FCC-tested hams were probably the curiosities.

> Wonder how much cheating may have occured, if there was only

Seems to me there have been more instances of test fraud committed by VEs than there were by the old by-mail proctors. By far.

My proctor in '58 had learned the code many years before, but just long enough to pass his General license. What he had was an old WWII punched tape code machine that sent out 5-letter code groups at any speed setting. (No easy Farnsworth sending in those days.) So, he marked a start spot on the paper tape, set the machine to send 13 wpm, ran it for 5 minutes, then handed the tape to me to read off the letters from the tape punches while he checked my copy sheet. It was all on the up-and-up, even if he didn't copy code. Then he listened to me send for a minute and said it "sounded good."
HI

However, through scouting, I met several ex-Conditional hams from Rocky Mount, NC. Finally I asked one of them why they (teenagers) were no longer hams. The story went that the FCC questioned the validity of one proctor that was responsible for a large number Conditional hams licenses from that area. So, the FCC invoked their right to re-examine any Conditional licensee. All the people tested by this one proctor were notified by letter that the FCC was going to retest in Rocky Mount, on a Saturday. (Never heard how long they were given to get ready.) Anyhow, according to the story, only two of those hams to be re-tested showed up; the rest of the group organized a beach party (many miles away) that Saturday. My "source" didn't mention how the two that did take the test made out.

> "modems".

Supposedly BPL runs from roughly 2 to ~80 Mhz. 78Mhz slices can be
stacked one after another at microwave frequencies. Net result could
be real competition amongst wireless service providers. Which BPL
can't provide, yer back to the take it or leave it monopoly days with
BPL.

> Both use either the existing slice of radio spectra
> (somewhere up in the microwave bands)

I think Wi-Fi as it currently exists operates around 2.4-2.5 Ghz. and
might be of concern to the hams who also use that part of the
spectrum. But if push comes to shove and it gets down to giving up HF
ham radio for BPL vs. giving up the 2.4Ghz ham band for wireless ops
there won't be a whole lot of discussion about it.

> or existing power wires.

Which is what they're doing. The 'lectric companies make amps and
volts, they don't develop broadband access technologies. There are
folk out there who have enough money to spare to take flyers on new
technolgies. If their investments turn out to be dot.bombs they simply
write 'em off and go looking for another pot of gold.

In the case of BPL the developers are a clatch of high-risk venture capitalized startups which managed to breath in the ears of some technically clueless politicians in the right places. Welcome to Mikey's world . .

My buddy who is a ham and a long-haul trucker pays $150/year to his two Wi-Fi service providers which is less than the $175 I pay my neighborhood 56Kbs dial-up ISP. But even at this early stage of the technology he has broadband service just about everywhere he goes across the country.

How can a guy with BPL service provided by his hometown Podunk Hollow Electric Company "dial in" when he visits Aunt Minnie in Des Moines who doesn't have BPL on her house wiring? At least I have PoP sites available all over the country I can dial into with just a phone line. BPL is a house of cards.

You'd be surprised what can be heard along the grayline...

Seems to be some trouble getting the antenna on the orbiter deployed.
Hope they get it fixed.
>
> It's also going to probe Mars' ionosphere as well. Martian hams

> Earth...

Maybe. But since Mars is further from the sun, perhaps its ionosphere
is in even poorer shape than our own. And since the Martian atmosphere
is thinner, the height of the 'F' regions will be less.

Of course radio astronomy was essentially invented by hams....

Heh! Some "good ol' days"!

What happened if there wasn't a FCC office within (fill in the mileage depending on what year and phase of the moon) miles, and there was no other amateur proctor within the same. I have to imagine that there were some places out west that were plenty remote from both.

Yup. Eric explained that when he rolls to a stop just about everywhere
the big trucks go he simply fires up his laptop and watches the thing
automatically surfing the spectrum for a connection. When it finds one
he gets a screen which essentially asks "OK what do you want me to do
now Master?" With a $60 laptop internal modem and I guess some
software which comes with the modem. He's plugged an external antenna
which is attached to the underside of his composite cab roof into the
modem. "Wi-Fi dxing". I asked him how he'd like to have a pair of
stacked Wi-Fi yagis and a rotator . . .

In spades. Looks to me like the incredible growth of Wi-Fi has
occurred mostly in just the past couple years. Since about when we
first heard about BPL. Typical snail's pace power utility-related
"technology development" rates.

There's another aspect to this whole topic area. At the moment Wi-Fi
is the poster child of wireless access technologies. But Wi-Fi is in
competition with other lesser-known flavors of the basic technology.
Competition always brings good things and the game has only barely
gotten underway. Maybe I'll give Carl Anderson a buzz, he's up to

eyballs in the biz and get him to log in here and provide some
insights.

> There's no "winners" here, Brain...Your "mentor" thinks there is, but
>there isn't...just folks with differing opinions.

This isn't a "game," little man. It is a newsgroup for discussion of
certain issues.

Those issues do NOT concern themselves with your Yell-Yell tactics
of trying to denigrate all those who do not share your viewpoints.

> Unfortunately thre are ALSO people here who feel compelled to be
>mistruthful and decietful.

Then you MUST be looking into a mirror when writing that.

Differing viewpoints on subjects are simply differing viewpoints.

You do NOT have some kind of "lock" on what "should be" in
anything.

> People like you and Lennie.

Poor baby. Unable to understand that your behavior in here is NOT
acceptible? That's one of the key syndromes of sociopathy. Not
acceptible in social communications.

So far, you managed to write direct insults to both myself and Brian.
You've charged Brian with pederasty and homosexuality. You've
insulted his wife and family. You've insulted myself and my wife,
alleged that I've had no education and that my wife got her two
Masters not from the University of Illinois but from some mythical
correspondence school. You've insulted my service record and pride
in military service (despite being given the proper title and MOS) and
made non-detailed allegations of work conduct from unspecified
persons. In other words, you've not only insulted both Brian and
myself but you've gone off the deep end into LYING behavior.

> People can have differing opinions and not have to resort to the kinds of
>deceit and lies the two of you seem to think are inherently natural.

Poor baby nursie. Can't take the terrible light of the images shown
him in replies.

To reiterate, differing viewpoints are simply differing viewpoints, NOT
"lies." Try to accept that. It is a part of life. Life isn't going to
change
just for you.

This newsgroup isn't some amusement park shooting gallery where you
can plink off nasties to your heart's content. It is filled with folks who
really want to discuss issues and some of those folks CAN shoot back
when personally insulted! Most of us have far more "ammunition" than
you've ever acquired. Your mighty macho morsemanship credential
is NOT some form of body armor. You can't have it the way you want
it...go to Burger King if that's what you insist. Chew on that.

Obsessive psychotics are like that. Stuck on the one thing they
have experienced with some margin of success, unable to envision
anything else. So, all have to do as they do because They did it.

Twelve steps? Hmmm...that's about half a floor of stairway. Not
enough to reach a new level. He must be floored on a proper
answer, having to resort to the usual insulting rhetoric and
general Yell-Yell. The old "hup-too-tree-foah" is very familiar so
therefore he relies on that as his "step up."

They haven't launched it yet, but they think that the design of
the antenna isn't good enough for prime time yet. You don't
want to fly something you think has a serious issue.

More that have been caught, that is. In the old days, it's possible
that the old by-mail proctor takes something "under the table" and
"helps" the applicant take the tests. And without additional proctors
like in today's VE system, how could anyone ever know? It could turn
out that there is less cheating today as the odds of getting caught
may be much higher. And that those who try anyway get caught more
often. In the old days more people could proctor the tests (IIRC
any general, advanced or extra could do it). So it was likely many
proctors did only a handful of tests. And it would be really hard
to tell (at the FCC field office) if a proctor cut someone a break
or not. With today's VE system, a few "proctors" do lots of tests
of lots of people, and if there was a corrupt group of VEs a lot
of people would hear of it and someone would eventually squeal.
And say you're a VE wanting to take bribes, there's a big risk
to even broach the subject with the other 2 VEs in your group.
That should kill off a fair amount of corruption that would have
gone ahead under the old proctor system.

Back in 1976 when I tested for my tech license, I faced a steely-eyed
black woman FCC examiner. Who knew what she was doing, and could
copy code (I had to send code to her).

The FCC was giving out recycled call signs that year. Someone
else once had WA2ISE before I was given it. My father had
WB2JIA a few years before I got mine, so in a sense I was
"out of sequence". Maybe the FCC didn't want to hand out
"WC"s as people would use phonetics like "Water Closet ..."

1669. Re: FCC Office Testing History

The story went that the FCC questioned the validity of one proctor
> that was responsible for a large number Conditional hams licenses from that
> area. So, the FCC invoked their right to re-examine any Conditional
> licensee. All the people tested by this one proctor were notified by letter
> that the FCC was going to retest in Rocky Mount, according to the story,
> only two of those hams to be re-tested showed up; My "source" didn't
> mention how the two that did take the test made out.
>

A similar story here in NNJ: about 30 years ago.
Seems that a proctor did a few tests
as part of the local ham club. One of the test takers was the
guy's wife (I don't think that they had a rule about relatives
then) and passes on the up and up. She gets the tech
license, but seems the
local FCC field engineer was annoyed about something with one of
the members of that club, and decides to cause trouble. She gets
called in for a retest at the field office in NYC. As they rarely
did 5WPM tests there they had to dig around for a 5WPM test tape
(paper tape with holes). Turns out the tape was defective, but
none of the test givers knew how to copy code and decided she
was trying to BS her way out of not being able to copy code.
They took her license... One had little recourse then.

Jim, I was called a liar when I said that you almost had to know a ham
to become a ham. Nice bunch of people here.

The WC#$$$ call format block was reserved for RACES stations.

Zactly!!! Without the DXCC Desk approving the operation, and it
won't... it's completely illegal and unlawful.

Hi, hi.

Since that page was last modified July 14, 2004 I hardly think it is
outdated. If so, why don't you give us a more current link that explains
how one goes about getting a radio endorsement for a CDL. And just what
does the Enviornmental Protection Agency have to do with a CDL?

Too widely known to work. But he can be admired for trying.

> Folkses usually have memories of their own.

Very unfortunately for Steve. But he thinks he can get by with his
false accusations. Hi, hi. Kind of like playing peek-a-boo with a
two year old. They close their eyes and think you're gone!!!

We readers all know
> what is repeatedly said, phrases used, etc.

Over and over and over. Too bad it doesn't work with thinking people.

Those that Yell
> "I never said that!" (more or less) are just trying to bluff their way
> out of a corner they got boxed into.

"Sorry Hans, MARS >>>IS<<< Amateur Radio!" Hi, hi.

That was just stoopid.

Then there are his accusations of homosexuality and pedophilia,
constant references to penises, and regular references to needing to
get to our family members. Oh yeh, almost forgot, "dialing..."

Scary dude.

This is where I wished Sidney Portier were a ham and could participate
in this newsgroup with a nice rendition of the "Amen" song.

Unfortunately, Sidney is not a ham, and would be told to take his song
and go to he11, not letting the door hit him on the a$$...

Hey, hey, hey! This isn't a Boeing aviation newsgroup. Thought
you'se guys would have learned by now that unless you're the Morse
Code Elitists, you have to confine your comments to AMATEUR RADIO.

Sheesh!!!

Rod, you might want to read KH2D's wise words concerning "The War."
Very insightful. I don't agree with everything he says, but I respect
his opinion.

Search "KH2D" and you'll find it easily.

It's going to be a lonnnnnng wait before any hamastronauts will
get there. Maybe by 2026 or so, to celebrate the centennial of
that "prize." :-)

>> What mode ya gonna use, Jimmie? Besides break-in "cw," that is?

>I suggest Steve manne the hamme station on MARS. He's almost there
>now anyway.

Really? I thought he was waayyyyyy beyond that, like out in
the Oort Cloud chasing Voyager. :-)

No matter. The communications, the REAL communications with
any Mars-bound 'nauts will be handled by professionals. Anything
else is quite secondary.

BTW, this subject was already broached by George O. Smith, an
engineer who was a ham and wrote some good action science-
fiction stories when not working on proximity fuses during WW2.
One of his stories, published just after WW2 was over, was
entitled "QRM - Interplanetary." :-)

You can probably find that story in the collection of "Venus
Equilateral" stories republished in paperback form a few years
ago. The "Venus Equilateral" was a relay station in orbit between
Earth and Venus...origins of publishing in the 40s and 50s when
the characteristics of Venus weren't known (it is hot as heck and
mostly carbon dioxide in atmosphere).

My point exactly.

>What happened if there wasn't a FCC office within (fill in the mileage
>depending on what year and phase of the moon) miles, and there was no
>other amateur proctor within the same. I have to imagine that there were
>some places out west that were plenty remote from both.

The old Callbooks and other records indicate that hams are pretty well represented even in those areas. Part of this was due to the use of ham radio emergency and backup comms in outlying areas. etc. Plus folks who live in such places will tell you that traveling long distances to do things is just part of the lifestyle. Heck, when I lived in New York State, going 50 miles one-way to see a movie or visit a department store was common practice. Going 150 miles one way wasn't a big deal - and that's here in the Northast!

The person giving the test did not have to be a ham, either - holders of some commercial licenses and military qualifications could do it too. ARRL and others maintained a registry of volunteer examiner hams.

But you had to find the person and set up an exam session.

Today's FCC isn't the FCC of 40 or even 20 years ago.

>Sometimes I feel that the fact that ham radio still
>exists today is something of a regulatory anomaly.

Without folks like the Newington gang amateru radio would just be a memory by now. Or 30-40-50 years ago.

>Simply a matter of population distribution vs. FCC field office
>locations. Here in the Boston - D.C. strip "by-mail" licenses were
>curiosities. In places like the Dakotas FCC-tested hams were probably
>the curiosities.

Partly. But there were folks even around here with Conditionals, as a result of living outside the circle or some such.

I recall one fella who "moved" to his grandparent's place for a summer. Said place just happened to be a little over the distance requirement. Got his Conditional that summer, then "moved" back to Philly metro area.

>
>Seems to me there have been more instances of test fraud committed by
>VEs than there were by the old by-mail proctors. By far.
>
WA2ISE answered that one decisively. In the old days the only people who would really know if a by-mail test was on the up and up were the volunteer examiner and the person taking the test. It was their word alone. Of course FCC reserved the right to retest anyone (and still does).

Even the FCC office tests were not without some problems. There was one case I know of where, for a fee, a guy would assume a fake identity and take FCC exams for people - often at offices removed from where the people actually lived. FCC finally cottoned on to him by comparing handwriting. Federal prison...

>Sheesh!!!

Gosh, YES, Brian. I have erred. My penance is to listen to more
yell-yell commanding the assembly of radio ham corps to ALWAYS
speak ONLY about AMATEUR RADIO...while he goes into

paroxysms of "licensures" and CAP and the murine corpse. Right.

I'm absolutely positive that Rev. Jim will jump in here at any moment, waving his "Janes" (book publisher of military stats in UK) and saying (in no uncertain terms) that the wings of a jetliner ARE insulated and ARE dipole antennas! :-)

Kellie will jump in (as proud little vultures do) and make more Putzian commentary on NCTAs of the independent persuasion. Eventually, when he feels the waters are "safe," the World's Greatest DXer will also chime in. Nice crowd in here, always "willing to help" expand everyone's "knowledge." :-)

Meanwhile the vertical stabilizer cap on the military 707 family will still be used as a short antenna for HF communications.

> that the current VE system would be more secure.
>

Todays VE's (if they wanted to) could ensure a passing grade because they have the answer key in their possession at the time and place of the examination. Unless there are red flags, the FCC "takes their word for it" that an applicant has passed.

The VE's proctoring the old exams did not have answer keys and thus could not ensure a passing grade. Also, since there were no published question pools, the VE knew only in general terms what would be on the examination and could not know in advance the exact answer to each possible test item. This would tend to make it more difficult to cheat.

On the other side of the coin, today's system has 3 VE's involved in the examination as opposed to a single examiner. This means that an applicant bent on gaming the system now needs to subborn three individuals, not just one.

In either case, it ultimately boils down to the personal integrity of the testers and the testees. I have a generally high opinion of the honesty of our population and am not inclined to believe that cheating (then or now) exist(s)(ed) except in a very few isolated cases. The few cases cited over and over in opposition to my view are notable by their rarity against the background of overwhelming demonstrated integrity of the system.

You are now into your eighth decade on the planet. You've declared an interest in amateur radio which has spanned several decades. You've posted here for eight years or so. I guess it takes time to rev up that interest to the point of overcoming inertia.

> >I still laugh at him. I stop laughing when it hurts, or when I

Well, kindly old gent, you've pretty well summed up the way I feel about you. You're big on wind, short on expertise. You're still a bystander in amateur radio.

I 'spose there had to be incidents like that. I'll further 'spose that
most of it involved buddies doing the proctoring and passing out a
"hint" or two during the exams or some slack on the code tests rather
than getting involved with passing green stamps under the table which
would have been federal felonies.

> And without additional proctors
> like in today's VE system, how could anyone ever know?

Right: We don't know and never will. Which kinda terminates the
discussion.

> It could turn
> out that there is less cheating today as the odds of getting caught

> That should kill off a fair amount of corruption that would have
> gone ahead under the old proctor system.

Let's hope so since the only way to get a ham ticket these days is via a VEC group.

I never paid much attention to any of it back then. The Philly FCC office was only a 45 minute hop on the Sharon Hill/69th Street trolley and the Market Street El so "mail order" tests were not an interest or a concern on my part. I sat for all four of my exams in front of one of the most notorious FCC Examiners in the biz for my Novice, General and 14 years later my Extra and Telegraph II when Joe Squelch The Examiner got to do me yet again.

I lost track of how many exams I have VE'd, however I have NEVER seen even the slightest suggestion of impropriety.

On one exam, we had an examiner that was a "twice-removed cousin" of one examinee and he submitted a letter along with the tests stating that and wouldn't even say hello to his cousin until after the exam for fear it would "look wrong". (He didn't handle the exam in any way for that person)

Is it possible there are cheaters? Sure. What can we expect in a nation that not only elected but RE-elected a confirmed liar, yet still expects some sort of diety-level ethics from it's elected officials? Nodnod winkwink.

Yep -but neither that fact nor even amateur radio are mentioned in the article.

Reading the comments to the article are intersting too. Some commenters try to discredit the author based solely on the fact that he is a ham, regardless of the technical merit of his arguments.

Great article nonetheless.

There are a few (very few) documented cases of cheating. Considering the volume of Testing done by VEs it is a rare thing.

Welp, Dave, it would appear that I have learned to spell that word incorrectly. Unless/until Riley sends me a notice, I'll probably keep spelling it that way.

BTW, how many attempts did you make at working the Frenchmen out of band? Five, six? More? Are you still attempting it?

Jimmy has an interest in Mars. Let us know when he has become a
Martian.

Just a long series of DXpeditions.

so that he could eventually
> RULE over ham radio in the US of A and demand everyone
> "show interest" in radio by getting ham licenses.

The only thing he rules over is his Ten-Tec radio and his out of band
Frenchmen.

I assumed he took the Morse endorsement exam. Todays hammes should
still be able to take the Morse endorsement exam if they can find a
COLEM willing to do it. And a fee of anything from $75 on up.

Relay station? Whatta coincidence. That's one of the words in the national organization of amateur radio operators right here in the USA.

There's also the safety issue. Anything that is close to the MV
distribution line has to be insulated out the wazoo, tested, approved,
rated, etc. And installed by folks qualified to work on those lines.
Which equates to $$$. Worst part of Wi-Fi installation is terminating
the fiber.
>

Amateur Radio Newsline™ Report 1408 August 6, 2004

**

A WORD FROM THE ARNEWSLINE (tm) SUPPORT FUND

The following is not necessarilly for retransmission. I guess you already know that if you are hearing my voice on a closed-circuit advisory it means that Newsline is again facing a financial crisis. Well, you're right.

The solution to the problem really lies with you. Our world-wide all volunteer staff produces these newscasts for you. The all volunteer Young Ham of the Year Committee labors tirelessly each year to select a youngster to receive the Award. Joe Eisenberg, K0NEB, oversees the Newsline sponsored Roy Neal, K6DUE, Amateur Radio Mentoring Project database, doing so at no cost. The list goes on and on.

I too am a volunteer, but I have to be the realist. I'm the accountant who has to look at the bottom line and when it turns red, I have to say -- hold on -- there is no more money to continue. And that's about where we are right now.

So, here's the bottom line. If you want the newscasts to continue. If you want the mentoring program to continue and the Young Ham of the Year Award to continue, we need you to show it now -- right now -- through your financial support of Amateur Radio Newsline.

Remember that Amateur Radio Newsline is a federally chartered 501(C)(3) and California state not-for-profit corporation. This makes your donations tax deductible, whether you're an individual or a club. The address to send them to is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California 91066. If you missed the address don't worry. It will be repeated at the end of this week's report.

For now I thank you for listening, for responding and offer you this weeks newscast which follows immediately. (ARNewsline Support Fund)

**

Amateur Radio Newsline report number 1408 with a release date of Friday, August 6th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The B-P-L battelground expands in California and Texas while a U-K repeater is ordered off the air. Find out the details on Amateur Radio Newsline report number 1408 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: SAN DIEGO CA. UTILITY REPORTEDLY CONSIDERING BPL

San Diego California could be the next B-P-L battleground. This, as an informed source tells the CGC Communicator broadcast industry newsletter that San Diego Gas & Electric is considering the deployment of Broadband over Power Lines in its service area. Bill Pasternak, WA6ITF, is here with the specifics:

--

According to Gonsett's CGC newsletter, an informed source has told him that San Diego Gas & Electric's communication systems planners met recently and are seriously considering endorsing and sponsoring B-P-L on the unility's power distribution system. The newsletter also says that San Diego Gas & Electric is considering entertaining proposals to partner with vendors for one or more field demonstrations of B-P-L technology.

CGC says that these plans should be of concern to all users of the High Frequeny and low band VHF spectrum. This includes TV Channels 2 through 5 and possibly even Channel 6. The latter because spurious and harmonic energy could reach these higher frequencies.

According to CGC and its unnamed source, San Diego Gas & Electric is aware that deployment of B-P-L in its service arera could cause considerable radio frequency interference. Even so, planners at the utility still appear ready to proceed.

More on this as it develops. I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

Bob Gonsett is known on the ham bands as W6VR. He says that he has a call pending with San Diego Gas & Electric corporate communications department to determine the company's official position on BPL. Bob also says to stay tuned for updates. (CGC)

**

THE BPL FIGHT: A TEXAS TRYOUT

Meantime, Larry Pollack, of the W5YI VEC reports that Central Texas-based Broadband Horizons has launched B-P-L operations in three Texas communities. The pilot projects were launched in mid-June in the towns of Blanco, Burnet and Weimar. According to Mike Steele, Burnet's City Manager, the community has had great success with the initial start-up. He says the city plans to expand B-P-L service it to additional parts of the municipality. (W5YI VEC)

**

THE BPL FIGHT: A BIG WIN IN PEN YAN NY

Meantime the B-P-L test is over in Pen Yan, New York and it appears as if ham radfio has won this round. This,, with word that the broadband provider that's been testing B-P-L in Penn Yan reportedly plans to "move away" from that technology.

According to the ARRL Letter, the Western New York community of some 5000 residents has been considering various proposals with Data Ventures to offer broadband service. A B-PL trial had been underway in Penn Yan for several months.

The village reportedly would get 10 percent of the generated revenue. Now, according to an article in the July 28th edition of the Finger Lakes Times Online, the provider is now proposing to employ wireless mesh "WiFi" technology instead of BPL and ARRL C-E-O Dave Sumner, K1ZZ, has already congratulated Penn Yan Mayor Douglas Marchionda Jr and DVI for going with wireless broadband instead of B-P-L. (ARRL)

**

THE BPL FIGHT: SPOKANE GOES WIDE AREA WI-FI

Spokane, Washington has also opted for Wi-Fi over B-P-L. This as that city inaugurates a wireless Internet access system covering 100 blocks of downtown Spokane.

The wireless zone uses new technology that allows Internet signals to be transmitted more than a mile. This is far beyond the traditional 200- to 300-foot range of previous Wi-Fi systems.

The Wi-Fi area is divided into a private network for use by the city and an open network for the public. Public users can connect for two hours a day at no charge, and subscription plans are in the works for extended use. One Eighty Networks provided the networking for the project. (Published reports)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world WR6ABD repeater serving Aptos California.

(5 sec pause here)

**
RADIO RULES: NO MORE "GROUP X" CALLSIGNS

The ARRL reports that the FCC is no longer issue 2 by 3 format vanity call signs that begin with the prefixes WC, WR, WK and WT. The Commission has acknowledged that it erroneously granted more than 150 WR and WC prefix 2 by 3 vanity call signs from 1997 through September 2003, when it began rejecting such call sign requests.

In the late 1970s, the FCC announced a new Amateur Service call sign assignment system. It provided four standard call sign groups, designated Group A, B, C and D, delineated by license class and issued sequentially with no backfilling. The FCC's Bill Cross, W3TN, recently told the nation's volunteer examiner coordinators that the FCC also had a "Group X." These included WC or RACES, WR repeater, WK and WT-prefix 2 by 3 format call signs reportedly reserved for special-use licenses.

The FCC stopped issuing repeater call signs in 1983 and ceased renewing RACES licenses in 2000. After the current vanity program began in 1996, several ham clubs sought new and formerly held repeater and RACES-type call signs. When the Universal Licensing System came along in August 1999, however, the FCC encountered some licensing system programming shortcomings, including the anomalous assignments of WC and WR prefix 2 by 3 call signs as acceptable formats.

When the FCC implemented programming corrections that halted the issuance of Group X call signs in September 2003, it did not advise the amateur community. As a result, several amateurs who filed for 2 by 3 WC or WR prefix call signs had their applications dismissed without any explanation beyond saying that the applicant's call sign choice was unavailable. That remains the case. The FCC has not indicated whether it plans to address the WC and WR prefix 2 by 3 call signs it's already issued.

In a related matter, the FCC's new Amateur Radio vanity call sign regulatory fee of $20.80 for the 10-year license term goes into effect Friday, August 6. All applications received at the FCC on or after that date must be accompanied by the new, higher fee. (ARRL)

**

ENFORCEMENT: RIS ORDERS REPEATER OFF THE AIR

A 2 meter repeater in the United Kingdom has been ordered off the air after it was involved in an interference issue. The Leicestershire GB3CF system which operates on 145.600 MHz, was closed down on Sunday the 25th of July following a request by the Radio Investigation Service due to an alleged incident of interference.

Service will be resumed as soon as investigations have been completed. The report did not say if the repeater was causing interference to other operations or if it was being interfered with. (GB2RS)

**

RADIO LAW: FEDERAL COURT RULES AGAINST CALIFORNIA CITY

Meantime, on this side of the Astlantic a big win for radio operations but another major loss for a city in its fight to restrict towers and antennas. Bruce Tennant, K6PZW, reports:

--

The attorney for a Rancho Palos Verdes California antenna owner says that his client won a clear victory against the city. This, following a recent federal district court decision requiring Rancho Palos Verdes to allow him to operate a broadcasting business from his unoccupied home. The judge also ruled that the plaintiff, James A Kay. Jr., may seek damages and legal costs.

And this is not the first major loss for the city. Earlier this year, the U.S. 9th Circuit Court of Appeals ruled that another Rancho Palos Verdes antenna owner could seek compensatory damages against the city. As previously reported, Mark Abrams, WA6DPB, said he will file a claim for damage to his two way radio business while he and the city fought numerous court battles over the right to regulate commercial radio frequencies.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Abrams has a 52 foot tall antenna tower in his backyard. The city has appealed the case to the U.S. Supreme Court. The full story is on-line at

RADIO LAW: AN ANTENNA FREE ZONE

A real estate developer in Australia has come up with some of the toughest property use restrictions ever dreamed of. W-I-A Newscaster Graham Kemp, VK4BB, joins us with the details:

--

VK2WI have reported on a story that the Albury-Wodonga Development Corporation has set some restrictions on its new 40 block Thurgoona subdivision, near Albury.

Listeners to this WIA National News service through the 146.75 repeater can shed any thoughts of establishing a shack in the backyard, as the corporation has banned the erection of free - standing garages or sheds. One may also forget about erecting any antenna arrays as the corporation has also banned external TV antennas, any TV antennas should be placed under the roof or be internal.

Satellite dishes are also under scrutiny; you can have one, as long as no one can see it!

For the Am ateur Radio Newsline, Im Graham Kemp, VK4BB.

--

With these restrictions in place the potential amateur radio activity, using external antennas, is virtually impossible. (VK2GJH via WIA News)

RESCUE RADIO: WX4NHC ACTIVATED FOR HURRICANE ALEX

WX4NHC, the Amateur Radio Station at the National Hurricane Center in Miami was activated on August 3rd. This, in anticipation of the arrival of the first major tropiocal storm of the 2004 hurricane season.

Named Alex, the storm was a catigory one hurricane when the WX4NHC came to life at about 10 a-m Eastern on Tuesday morning. Catigory one means the storm had sustained winds of 75 MPH. It was forecast to strengthen before tracking just off the coast of North Carolina on Tuesday afternoon.

The WX4NHC Group monitored the Hurricane Watch Net on 14.325 Mhz. It also took part in EchoLink and I-R-L-P Skywarn Nets that were operational during the approach and departure of the storm.

WX4NHC has maintained an active Amateur Radio Station at the National Hurricane Center for the past 24 years. Please visit www.wx4nhc.org/WX-form1.html www.voipwx.net for details. (CQ)

**

RADIO LAW: IMPROVING AIRSPACE SAFETY

Garmin, Inc. has been conditionally granted its request to use 978 MHz as an aircraft radio datalink frequency. The idea is to enhance flight safety by enabling aircraft in the same airspace to precisely track each other's movement, reducing the risk of mid-air collisions. Datastreams containing location, velocity, altitude and heading are valuable commodities in the arena of air safety. More is o-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1871A1.doc (CCG)

ON THE NET: TEENS SET WIFI RECORD

A group of teenage hamss from the Cincinnati area got an ovation at the recent Las Vegas DefCon hacker conference. This, after organizers announced that the winners of this year's Wi-Fi shootout might have broken a world D-X record for ground distance in establishing a 55.1-mile Wi-Fi connection.

Ben Corrado KC8RKO, Andy Meng N8MX, Justin Rigling KC8OIO and Brandon Schamer KG4NVK won the prize for greatest distance achieved for an 802.11b network.

The teens, all 18 and 19 years old achieved the record using an amplifier and homebrewed antennas on both ends. This exceeded last

year's distance winner by 20 miles. Then, when they established that record, they turned off their amplifiers and broke the record for an unamplified connection at the same distance.

DefCon, in its 12th year is a gathering of hackers, security professionals and intelligence agents from around the world. The Wi-Fi shootout, held for the second time, is among the most popular contests. Six teams participated but it was ham radio know-how that came in number one. (N0AX)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: GEORGE DILLON NAMED ASSISTANT CHIEF OF THE FCC ENFORCEMENT BUREAU

Some names in the news. Word that George R. Dillon has been named Assistant Bureau Chief of the Enforcement Bureau. Dillon most recently served as the Bureau's Engineering Advisor, assisting the Bureau Chief on a wide range of public safety, technical and management projects. He also represents the Bureau on the Commission's "Engineering-in-Training" Board, for which he received the Chairman's Special Achievement Award, and was the principal leader of the Knowledge Sharing Program, which permits field engineers and headquarters engineers to exchange information and expertise. He is also a member of the Spectrum Policy Task Force. FCC)

**

NAMES IN THE NEWS: G4IDE NAMED WINNER OF TAPR LIFETIME AWARD

And Tuscon Amateur Packet Radio has presented its Lifetime Achievement Award to Roger Barker G4IDE, of Lincolnshire, in the U-K. Barker was honored for his work over the years in providing quality software for Amateur Radio operators that allows them to operate advanced digital modes without the difficulties once associated with these operations. T-A-P-R says that Baker's UI-View program is the benchmark by which all other A-P-R-S mapping software is compared to. (VK2TDS)

**

HAM RADIO IN SPACE: NEW U-K HAM TRANSPONDER IN SPACE ANNOUNCED

AMSAT-UK has announced a new amateur band transponder project. One to be launched as part of the European Space Agency's S SETI Express satellite.

The project was announced at the opening of the 2004 AMSAT-UK Colloquium by Dr. Martin Sweeting, G3YJO. Sweeting expressed his delight that AMSAT-UK has been able to work with the European Space Agency to provide, at very short notice, an S band 2.4ghz transmitter.

The SSETI Express project is believed to be the first ever pan-European student satellite with over 100 students from more than nine different countries working on it. The project is being coordinated and managed buy the Education Office of the European Space Agency. (AMSAT-UK, GB2RS)

**

SPACE SCIENCE: SMALLER ISS PRESENCE ANNOUNCED

NASA and its space partners have approved a scaled-down International Space Station with fewer astronauts and less science. This, so the United States can meet a 2010 deadline for ending shuttle flights.

According to news reports, the space agencies of Russia, Europe, Canada and Japan gave unanimous approval to a NASA plan that means the orbiting platform, now about half completed, will never become the beehive of scientific and commercial research once envisaged. In exchange, NASA will continue with plans to launch research modules owned by its partners, some of them already built.

The agreement means the station will never support long duration crews of seven astronauts, as originally planned. It will however be able to house at least four astronauts starting in 2009.

Phase one of the space-station was put into orbit in 1998. The first astronauts took up residence in 2000. (Published reports)

**

ON THE AIR: OH2B BEACON IS BACK ON THE AIR

Finland's OH2B beacon is back on the air after an absense of two years. OH2B is one of the eighteen stations in the world-wide five-band International Beacon Project network. It has already been heard in the UK on 14.100, 18.110, 21.150, 24.930 and 28. 200 Mhz. (GB2RS)

**

DX

In D-X, word that K4ZLE is returning to Uganda. He plans to operate as 5X2A through the 21st of August. Some effort will be made to operate on the lower H-F bands this year, mostly on CW. Activity is

also planned for PSK31. (GB2RS)

And F6EAY is in Kabul, Afghanistan and has been issued the callsign T6RF. At present he is active only on PSK31. QSL as directed on the air. (GB2RS)

Closer to home K-7-B-V reports that he will operate portable VP5 from the Turks and Caicos Islands from August 9th to the 16th. The trip will have focus on 6 and 2 meter WSJT work during the Perseid Meteor shower that peaks around August 12. H-F will, of course, get plenty of attention as well. QSL direct to K7BV. (VHF Reflector)

**

THAT FINAL ITEM: THE BIRDS ARE BACK

And finally this week, have you ever tuned in an owl? Yes, we said an owl. You know, tne find that go hoot in the night. Newsline's Joe Moell K0OV will tell you how.

--

It's been several months since I've advised you of opportunities for hams and scanner fans to help wildlife researchers tracking radio-tagged creatures. You can monitor these signals from your home or car. If you have direction finding gear, you might make a positive sighting. Right now, there's a need for ham help in the Denton and Collin County areas of Texas, where researcher Jennifer Johnston is releasing rehabilitated orphan Great Horned Owls into the wild. Six birds are on the air near 150 MHz as I speak, and more are expected to follow. We're also standing by for the departure of some young Burrowing Owls from their nesting places in Florida. A biologist from the University of South Florida wants know where they will end up. Nobody knows, but maybe you can help find out.

For all the details, including frequencies and ideas for equipping yourself for this project, go to www.homingin.com. That's HomingIn, as one word, homingin.com.

Thanks for your help. From southern California, where Burrowing Owls are raising their young in our own Imperial Valley, this is Joe Moell, K-zero-oscar-victor, for Amateur Radio Newsline.

--

Again that website is www.homingin.com (K0OV, ARNewsline(tm)

>"WC"s as people would use phonetics like "Water Closet ..."

IIRC the "WC" series at the time was reserved for RACES stations.
When separate RACES statsion licenses were no longer issued (1996)
the WC series became available for issuance under the Vanity system.

In the last few days the FCC released a notice that the WC, WK, WT,
and WX series calls were no longer available (reserved for special
issuances) but they had not decided what to do about those that had
veen issued since 1996.

Our ARES/RACES group got WC7EOC for the Washington County EOC
ARES/RACES station under the Vanity program. We hope that we can
keep it.....(Washington County - 7 - E O C is easy to remember).

>Perfect timing! Wonder if any of this group will be around then?

Yell-Yell will...he wrote in here that he "isn't going." :-)

Kellie will be here, intermittently snarling and issuing nastygrams
to anyone not loving contesting by "CW."

The Headmaster, having finally recycled his black SS uniform,
will be around after receiving a bulk shipment of balsawood
rulers to rap all the miscreant's knuckles. [he broke all previous
ones in various fits of fury]

Mama Dee will still be here playing the not-so-doting grandma
and chiding all the "children."

Rev. Jim may not be...it's either a "Jim Fixx" situation or he will
be on his way to Mars to join the happy group of Martian hams
celebrating Their prize. Jimmie will only talk about the Good Old
Days before humans had set foot on Mars.

Coslo will be here, still playing both sides of the rink, scoring
little, falling on the ice a lot.

Barnabus G. Overbyte will be in prison after a plagiarism trial
brought on by "Dr. Dobbs Journal of Computer Calisthenics and
Orthodontia (running light with no overbyte)" publishers.

Hans Breakup will, if it is not wintertime, be here once in a while,
still rerunning old stories of "Captain Code" and Don Stoner
editorial articles. [in winter he likes to hang out with iceholes]

Cross-posters, themselves cross, will become cross-dressers.

Remaining PCTA will have their code keys forcibly removed from
stiff, dead fingers.

The rest of us? We'll just have to wait. There's always a future
to look forward to, not a past.

>I wished I were on here to have seen that!

Jim is a shadow of his former self now, just his own site snarling
about "brain-dead old farts" and "clueless newbies."

He got a marvelously-done (however inappropriate) parody of No Code International with his "No SSB International" website. Technically well-done in appearance and format, it's output was dripping with industrial-strength vitriol for anyone DARING to speak against beloved morsemanship. NCI was the main target but Kehler did not overlook anyone else in throwing acid bombs in prose.

"No SSB International" no longer exists. NCI is still there. Morse's staying power lies with the fantasies of its devotees, therefore of limited life in amateurism. Kehler got health problems, moved off of Guam to the mainland, and the ph in here returned to a somewhat neutral value.

Maybe it plays a tape loop of Wagner, like "Ride of the Valkyries?"

Ought to make a movie out of that! I'll call Frank Coppola on that
tomorrow...maybe he can get Robert Duvall to play the gunnery
nurse roll? Ideal staging.

>> >> Typical response will be that one "must go to Google and cut-and-
>> >> paste a particular post or posts" in order to make a point. That

Geez, I can't wait for regular programming on TV to resume. That
will make a great episode of "SVU: Special Victims Unit."

Or even "The Badge" starring Michael Chiklets as the always-
angry cop-gone-wrong. :-)

[Chiklets, not Chiklis the good actor. Headmaster has to chew
on that for a while...]

>> >> >> >> > Until then, you've been caught in yet ANOTHER attempt to

The Headmaster has ruled again!

In the musical "My Fair Lady," Professor Higgins has a line about
language (in this case pronounciation)..."the French don't care
what they DO as long as they pronounce it correctly!" :-)

>BTW, how many attempts did you make at working the Frenchmen out of
>band? Five, six? More? Are you still attempting it?

Headmaster doesn't care what he do...except now he never did it. :-)

[he has often walked down that street before...but every time he tells
it we all go snore...]

I don't think the PCTA allow us NCTA to spit on the street. It's okay
for them to spit on us, though...house rules...and they do. :-)

Speaking of "CB antennas," [nobody was, but I thought ot introduce
something along that line in this subject thread] the best one I had
was a base-loaded short whip in a 1953 Austin-Healey running a
stock Viking Messenger crystal-controlled CB transceiver (tubes
with a vibrator-type HV supply). That was in 1960-1961. It helped
that the Austin-Healey had an aluminum body for the ground plane.
The little Healey was traded long ago but the Viking Messenger
still works though a bit dusty in the workshop. The whip is still
around on a shelf in the garage. Lots of local fun with it, social
gatherings and Sunday brunches and all that.

[now watch all the PCTA make nastygrams about that! :-)]

> possible test item. This would tend to make it more difficult to cheat.

True, but an extra would likely be able to "help" someone taking
a general written select mostly correct answers. Enough to pass.
You wouldn't want a perfect score anyway, might attract attention
if too many perfects happen...

>
> On the other side of the coin, today's system has 3 VE's involved in the
> examination as opposed to a single examiner. This means that an
> applicant bent on gaming the system now needs to subborn three
> individuals, not just one.

If, for example, if 1% of the proctors could be bribed or otherwise
induced to cheat, instead of 1% cheating in the old system, you'd
need to find 3 proctors who will cheat. That would be something
like 1% of 1% of 1% to get 3 cheaters. That would be 0.0001%.
Of course other factors come in to play in the real world, but
this wouldn't be wildly wrong. Some factors would amplify this,
others attenuate it.

>
> In either case, it ultimately boils down to the personal integrity of
> the testers and the testees. I have a generally high opinion of the
> honesty of our population

I picked out 1% cheaters partly as something like 1% of the population
are in jail or were. So that would be 99% of us who are honost enough
to avoid doing something that would warrent jail.

> There's no "winners" here, Brain...

Len, I think there are winners here. It's pretty clear that Steve has
been suckered into behaving foolishly over and over and over again.
He cannot NOT respond, and always in such a way that he looks like the
idiot he is. And he goes into it with his eyes wide open. Jim keeps
trying to warn him away. But he's too stupid to take Jim's advice.
Makes all the PCTA look bad. Hi, hi.

> Your "mentor" thinks there is, but
> there isn't...just folks with differing opinions.

Wow Len, we just have differing opinions. I think some of my opinions
are a lot like your opinions. I also think this gerbil is trying to
drive a wedge between us.

> Unfortunately thre are ALSO people here who feel compelled to be
> mistruthful and decietful.

Len, there are those who out and out lie. It is a typical liberal
strategy to lie, and lying is OK so long as it has the desired
outcome. Yell Yell so obviously belongs in that category.

Then there are others who are deceitful by omission. They critize one
set of actions by those that they don't like, and give a pass to the
same kind of actions from people they do like. They define the PCTA
double-standard. I would place Jim, Mike, David, and Kelly in that
category.

> People like you and Lennie.

People DO like me and Len. We're very likable guys.

> People can have differing opinions and not have to resort to the kinds of
> deceit and lies the two of you seem to think are inherently natural.

Len, I think Yell Yell is crying, "Liar, liar, pants on fiar" again.
Of course, he lies.

> Sucks to be you.

Oy vey. Whatta potty mouth. Where's that bar of Lie Soap?

She must have married well. No one who shares your genes could get to
Dublin by themselves.

I don't mind answering, "William". Bruce isn't here posting. When he
did so, I found him to be an illiterate clod. No double standard at
all. You can't show me one instance where I've ever agreed with anything
posted by WA8ULX. Now, feel better about your ineptitude regarding the
spelling of "privilege"?

What of Lennie NoCall? He'll still be waiting in twenty-two years?
Waiting for the first amateur radio 2-way between Mars and Earth?
Waiting for that "Extra right out of the box"? Just keep waiting...

So which under which category does your non-radio amateur pal, Leonard fall? See if you can determine after reading the following quote:

"Now, now...he was in the "foreign service" doing his part of
preserving freedom and democracy so that he could eventually
RULE over ham radio in the US of A and demand everyone
'show interest' in radio by getting ham licenses."

Now Len wrote that about me. I don't RULE or even rule over ham radio and the portion about showing interest in radio by getting a ham license is an oft-repeated fabrication. It comes back again and again, even after Len has been corrected. Len declared an interest in amateur radio which stretches back several decades. Not "radio" but "amateur radio". He has failed to act upon that interest ever. Tell your pal that it is Foreign Service, not "foreign service".

Ah - thanks for clearing that up. With so many confirmed liars to choose from, it was tough to be sure who you meant.

Maybe he was just following in the footsteps of "read my lips" and "not a crook". After all, if they could do it about stuff related to their jobs, why not a couple of whoppers about his personal life?
>
>Of course he should have specified WHICH woman....Probably Hilliary.

Uhhh . . In review of some ancient history here you *Putz* which you
increasingly don't handle well I dumped my prom date and steady
Isabelle on her doorstep (actually at the curb) and decked the long
pedal in Dad's big V8 Pontiac for home to break in my new General
ticket and worked G5ZK on 3.505 for my first new one. Isabelle was not
my sister Noreen. I did not date my sister. Your mileage might have
varied and nobody around here would be surprised if it did.

Then your previous posting concerning the 6M frequencies that you
worked the Frenchmen on was wrong. Or maybe you're wrong now. Or
maybe you don't know. Or maybe you do know and you're just trying to
cover your rear end.

Doesn't matter. I don't think anything that you could say at this
point can be trusted.

If my math is right, the one-way transmission time works out to between 188
seconds at closest approach to 688 seconds maximum.

But you can count on contest ops to figure a way to make that work. Use the
transmission time as a 'buffer' of sorts. Not a problem.

SO2R is just the beginning.

In article <4111BF13.1080000@ix.netcom.com>, Robert Casey
<wa2ise@ix.netcom.com> writes:

>> Nobody was tested "by mail".
>>
>> They were tested by volunteer examiners (as are virtually ALL of todays
>> applicants --- what goes around, comes around) who just happened to
>> obtain the test material through the postal service.
>>
>I think the distinction was that the proctor wans't supposed to look
>at the test itself, but just watch the candidate take the test and
>attest that he didn't cheat, then have the candidate put the answered
>test back in the envelope and the proctor signs off on the envelope or
>some such.

That's pretty much how it worked for the written test.

It went like this:

First the volunteer examiner gave you the code test - receiving and sending.
S/he certified that you got the required number of consecutive correct
characters at the designated speed, and could send at that speed as well.

Volunteer examiner then sent a letter to FCC requesting written exam. I think a
Form 610 was used for the purpose.

FCC processed the application and sent an exam package to the volunteer
examiner. Inside the package were instructions, return envelopes and the test
in its own sealed envelope.

The sealed envelope with the test and answer sheet inside was not to be opened
until the actual test began. The prospective ham did the test, put all the
sheets in another provided envelope which was sealed up. Whole mess went back
to FCC for grading and processing.

In theory, the volunteer examiner wasn't even supposed to look at the exam. No
copies were to be made, nor its contents divulged to anyone.

Of course there was nothing to stop people from deviating from the prescribed
path other than their own honesty and the possiblity of being turned in to the
FCC.

I think FCC was between a rock and a hard place on the whole issue. On the one
hand, they were tasked with making licensing accessible to the US population -
all of it, not just those who lived near big cities. On the other, they could
not have an exam point convenient to everyone.

Before 1954, the Conditional distance was 125 miles "air-line" - and this was before most of the interstate highway system existed. Back then, all hams closer than the distance had to go to FCC office - even Novices.

In 1954 the distance became 75 miles and Novices and Technicians went to "by-mail" exams, same as Conditional. But the Novice and Tech "by-mail" thing was regardless of distance! It is my understanding that this was done to reduce the workload on FCC exam points, which were being inundated by prospective hams.

In 1965 the distance went from 75 to 175 miles and the number of applications for Conditional dropped dramatically.

>The proctor wasn't supposed to grade it or anything, and
>the appicant wouldn't know if he passed untill some weeks later by mail.

Yep - the old "thin envelope" was what you were looking fo, because it contained only the license. The dreaded "thick envelope" contained paperwork to start the whole process all over again. No credit for the code tests - you had to do the whole song-and-dance from scratch.

>I'd call that "testing by mail". Today, the VEs give the tests, grades
>them, tells you if you passed or not, and then tells the FCC that you
>passed everything to get whatever level of ham license.

Not only that, the VEs *make up* the tests from the pool.

Really a sharp move by FCC - they get unpaid volunteers to do almost all of the grunt work, from coming up with questions for the pool to verifying CSCEs. Yet FCC retains all the authority and dictates procedure and the fees VEs can collect to reimburse their expenses.

Not likely.

The list was so long to choose from.

The "read my lips" utterenace was not, in my opinion, a lie, but a bad decision. Never say never in politics. He got boxed into a political corner and up the taxes went.

As for the "I am not a crook"...Well, he got caught. I don't think the price HE was force to pay wqas warranted. Richard Nixon DID get us out of Viet Nam and opened the China wall, among other political milestones. Had it not been for a bad political mistake on his part, he would have been enshrined as one of America's greatest presidents.

Clinton, in my not-so-humble opinon, was (is) one of the singularly most immoral and incompetent presidents we've ever had. His "credit" was that he could surround himself with people more able than he who could do the spin control. Any adult male that can't enjoy some recreational intimacy and keep it quiet is a fool!

>That too is incorrect.

I love seeing Brian the Brainless accusing others of "not know(ing)"...

>> Or maybe you do know and you're just trying to
>> cover your rear end.
>
>Sorry, you're incorrect again.

Of course he is...

Lennie's taught him how to "cover (HIS) rear end" rather well.

First he's got his Somalia logs, but he's not going to tell anyone
anything.

Then they are in his garage in storage.

Then they are in a rental storage facility.

He's gone around in so many circles with that one alone that he'd make
some NASCAR drivers jealous.

Then there's the assertions about how unlicensed comm devices "play a
major role in emergency comms".

Still waiting for His Untruthfulness to ante up some examples of THAT !

>decision.

And what Bill did with Monica was not, in his opinion, "having sex".

>Never say never in politics. He got boxed into a political corner
>and up the taxes went.

Papa Bush made apublic promise that he *knew* he could not keep. But he *knew* it would help get him elected. That qualifies as a lie to most people.

There's also lying by omission. Remember Willie Horton, and how Dukakis was blamed for letting him out of jail? Well, the rest of the story is that Dukakis, as governor, was *required by law* to let Willie out of jail, because a program *created by Dukakis' Republican predecessor* REQUIRED it. By law. No choice or discretion. That early release program was then dismantled by Dukakis' administration as soon as its shortcomings were apparent.

Papa Bush's campaign made a lot of noise about Willie Horton but not about the rest of the story.

Shall we talk about faked and misleading pictures of Jane Fonda and other people?

> As for the "I am not a crook"...Well, he got caught.

So it would be OK if he didn't get caught?

>I don't think the
>price HE was force to pay wqas warranted.

Really? Let's review what happened:

1) There were a series of "dirty tricks" implemented to discredit opposing candidates in the primaries. For example, phony campaign literature that looked like it was sent from a candidate's campaign was sent by CREEP to registered Democrats in that state. The phony literature misrepresented the candidate's position in ways that would make NH voters hate him. Thus, the opposition candidate that was the biggest threat to RMN was eliminated early in the primary process. (I think this trick was used against Muskie in New Hampshire)

That trick is why all campaign literature and advertising today is *required* to state who created it and paid for it. Great job, RMN.

And that's just one trick - he had a long history of them, going all the way back to early California campaigns of his.

2) A group of inept bunglers tried to burglarize the DNC Hq, specifically to obtain information about what the opposition was planning in the campaign. Unless I'm mistaken, simply breaking and entering is a felony. Conspiring to do so, breaking in for political reasons, etc., are even worse. But that's not the big stuff.

3) Once the Watergate evidence began to show up, the Nixon Administration tried to cover up what had ahppened. That's called obstruction of justice - which all of the people in the adminsitration had sworn not to do.

4) The evidence of both the burglary and the coverup became so damning and so complete that the Republican senate leader (I think it was Barry Goldwater?) had to go to the White House and advise Nixon to resign, because *his own party* could not support him any more, and Nixon would be impeached and then convicted of multiple major offenses if he stayed in office.

5) Nixon resigns and then is almost immediately pardoned of *all possible crimes*. (How you can pardon someone who hasn't been convicted of anything is still a mystery). He got the ultimate "get out of jail free" card.

> Richard Nixon DID get us out of Viet Nam

Sure - by simply giving up and walking away. The country rapidly fell to the North Vietnamese. What, exactly, was accomplished by all those years, lost lives, and billions of dollars?

He told us in 1968 that he had a "secret plan" to end the war. Four years later, that plan hadn't been put into action, but he got reelected anyway. Then there was the secret bombing of Cambodia..

>and opened the China wall, among other political milestones.

That he did.

There were also wage and price controls, which delayed stagflation but ultimately made it far worse.

>Had it not
>been for a bad political mistake on his part, he would have been enshrined as
>one of America's greatest presidents.

I don't see how. Not compared to the likes of FDR or Eisenhower, to name just two.

>Clinton, in my not-so-humble opinon, was (is) one of the singularly most
>immoral and incompetent presidents we've ever had.

Because he cheated on his wife? Heck, look at what ol' Newt did to *his* first wife.

>His "credit" was that he
>could surround himself with people more able than he who could do the spin
>control. Any adult male that can't enjoy some recreational intimacy and keep
>it quiet is a fool!

So it was OK that he fooled around but not OK that he got caught? I disagree!

Welp, there you have it.

So trust me. I've had four 2 year olds. They've all grown up. Don't
know what Yell Yell's problem is.

Len, there's a different socially, ahhh, backwards person in here who dated his sister. Name of Bruce. But I don't know if they actually dated, or if they skipped that and just got married. Anyway, "dumping" your date to go work phone is about Kelly's speed.

Very easy to get the two mixed up.

The answer was very, very specific. Bill named her immediatly after
where Steve's quote left off. Her name was not Hillary.

So very typical of Steve to leave out the crucial part of a quote.

In article <fw5Rc.751$vF4.662@newssvr22.news.prodigy.com>, "Kim"
<mail@nomail.com> writes:

>I just gotta say (GRIN).

>1. Nixon is as guilty as anyone else (in this
>case, Clinton) of "screwing up"; and they all do.

Agreed - in fact, Nixon screwed up even more than most.

Y'know what RMN's big problem was? He didn't believe in himself. He didn't understand that he would have gotten elected and reelected without any dirty tricks at all.

> 2. Each and every US
>President has some hallmark they leave behind...well, most anyway.

Yep. Some more than others. Remember Jerry Ford and the pardon and WIN buttons? And Chevy Chase's spot-on imitation, complete with swine flu syringe sticking out of his arm?

>I'm not
>so sure I'd credit Nixon with getting us out of Viet Nam; but I would
>definitely credit him with opening relations with China and, possibly, being
>the beginning force toward the end of empires such as that.

Once they got exposed to rock'n'roll, blue jeans and McDonald's, they wanted to be capitalists. Heck, the Soviets weren't defeated by Star Wars, Radio Free Europe or Berlin as much as by the Pepsi Generation and Ronald McDonald.

>3. I'd say
>*anyone* who can't enjoy some recreational intimacy and keep it quiet is a
>fool.

He isn't the one who blabbed.

>BUT, on that note, is it that, that you are miffed about, or that he
>did it at all? <GRIN>

Exactly.

I know that for me, the lying was much worse than the act itself. I think it would have been much better for all if he'd done one of two things:

1) Said "That's a personal matter - it's none of your business - next question"

OR

2) Said "Yeah, sure, I shagged her silly. Most of you would have too, given the opportunity. Big deal, live with it."

Then just to drive it home:

"Now each of you who are standing in judgement, come on up here, take the oath and swear you *never* did anything like that."

Well, we can dream, can't we, Kim? I mean, just *imagine* him saying that...

I remember Clinton saying his role model was JFK. Well, JFK was allegedly involved with Marilyn Monroe, while WJC got Monica. Sigh.

Embarrassing, really.

And now there's a remake of "Manchurian Candidate". As if anybody could outdo the original.

What is nursie "ON" when writing in here? :-)

Poor nursie can't get it straight on who is the "DXpeditioner" and who isn't. His hatred causes him so much confusion.

>>> Or maybe you don't know.
>>
>>That too is incorrect.
>
> I love seeing Brian the Brainless accusing others of "not know(ing)"...

Because YOU don't know much at all?

Despite all your mighty "licensures" and pretty pieces of paper and all that military experience ("seven hostile actions" and shoebox citations)?

>>> Or maybe you do know and you're just trying to
>>> cover your rear end.
>>

>>Sorry, you're incorrect again.
>
> Of course he is...

Only to the PCTA Extra Double Standard.

> Lennie's taught him how to "cover (HIS) rear end" rather well.

I don't "teach" the obvious and the easy-to-understand, nursie.

> First he's got his Somalia logs, but he's not going to tell anyone
>anything.

Before that we had your "seven hostile actions" experience which
are un-named, un-identified. Then we had the shoebox full of
medals, unspecified.

Then we had the official, anyone-can-read-them definitions of MARS
as stated by the Department of Defense yet nursie said, "Sorry,
Hans, MARS >>IS<< amateur radio!"

> Then they are in his garage in storage.
>
> Then they are in a rental storage facility.

Then nursie still hasn't said where his "seven hostile actions" took
place.

Brian was THERE. Nursie wasn't.

> He's gone around in so many circles with that one alone that he'd make
>some NASCAR drivers jealous.

NASCAR drivers race on OVAL tracks. On the 2-mile tracks at about
185 MPH, faster than that powerful CAP "mission aircraft" flies. :-)

Nursie, you couldn't POSSIBLY compete in the same area as NASCAR
or KART or Indy or F1 drivers. Quit trying to make out like you be some
kind of whiz-bang in vehicles.

> Then there's the assertions about how unlicensed comm devices "play a
>major role in emergency comms".

You got it WRONG again, idiot. Not a "major" role. A very useful
one. Any communications medium is useful in REAL emergencies.

What "major emergency" has nursie been IN? With "comms?" Of
any kind? Were they used in your "seven hostile actions?"

I've been in two of those, using real communicaitons. Not using
amateur equipment. Not seeing any amateurs "doing comms."

I've done REAL HF communications as far back as a half century
ago, did it for three years in a row. What is nursie's "emergency
comms" experience or military communications? Restricted? To
reading about it on the ARRL news?

> Still waiting for His Untruthfulness to ante up some examples of THAT !

You bucking for a colonelcy, Jessup?

"You don't know the truth!" [Nicholson's famous line in the movie]

No problem. Us readers are still waiting for YOUR owning up to all
those "hostile actions" and all that "emergency comms" you've done.

So far, all us readers have seen are a bunch of YOUR vague claims
such as "losing count of how many hams you've VE'd" and foreign
hams you've "broken bread with" and other vagarities.

>>> Doesn't matter.
>>

Nursie, the only "documented liar" in here is YOU.

You STILL want to argue that "MARS >>IS<< amateur radio?"

Even with the DoD statements establishing it as a military
radio service?

>>> > You continue to snipe inaccurately with your pathetic one or two line

>documentation or validation of a DX opportunity that he claims he had and
>that hundreds of Hams would have been proud to pass along!

Idjit nursie been looking in the mirror again... tsk.

Brainless nursie can't state even one "hostile action" (other than
his every day in here).

Proud nursie doesn't know squat about military communications
or military avionics enough to name anything he claims to have
handled. Anyone who did his job "proudly" would remember most
of those.

Sick nursie allatime wanna make YELL-YELL at those who don't
agree with him.

>>> Why
>>> don't you let Jimmy speak for himself?
>>

>I had one here right now, I'd love to do it!

YOU don't have an HF antenna up?

Well, raise your mighty Putz! Do your QRP thing! :-)

>But I know I'd have the same
>results "working" him than anyone else in this forum has had "working" his
>mentor!

Excuses, excuses. Nursie's Putz be limp?

Nursie have a telephone? Or did he throw it out in some fit of rage
when he couldn't "call professionals and have Brian or myself
committed?"

Nursie be trying to get me to commit an illegal act of "working" on
the ham bands. Why nursie wanna be a conspirator to crime?

Nursie wanna "work" some of my references? Feel free. Just
erect your Putz antenna and you can "work" anyone. [make sure
your wifey don't have any knives in her hand, though, make you
QRT in a hurry...]

OK, just WHERE were those "hostile actions?"

And, have you yet understood just who is the authoritating agency
for MARS?

Everyone tune in tomorrow when da Yell-Yell machine will be at
it again with vagarities, backing up DavidoftheForeignService and
all the PCTAs.

>>about 5 to 15 minutes one way to make the trip...
>>
>If my math is right, the one-way transmission time works out to between 188
>seconds at closest approach to 688 seconds maximum.

A bit short that. According to my Almanac ("World Almanac and
Book of Facts 2001" published by World Almanac Books, p. 587),
the minimum to maximum distances of Earth to Mars are 34 to
249 Million miles. At 186,000 Miles per second, the ONE-WAY
time works out to be 183 to 1339 seconds (3.05 to 22.3 minutes).

A single two-way contact, one transmission at each end, would
take 6 to 44 minutes to complete, depending on the planetary
positions. The limiting factor on "rag chews" would be limited by
rotation of both planets. :-)

Of course, Rev. Jim, you WILL call MY calculations "incorrect"
or "wrong" or something like that, won't you? :-)

If so, better call up JPL and tell THEM you have the REAL values!

They've been doing it all wrong for better than 35 years! :-)

>But you can count on contest ops to figure a way to make that work. Use the
>transmission time as a 'buffer' of sorts. Not a problem.

"Not a problem?" What of all the blazing speed of "CW" done by
mighty macho morsemen doing an equivalent of 40 WPM (or
faster)?

Does morse code punch through faster than light?

>SO2R is just the beginning.

I think you'd better switch to some different stuff in your stash.

OK, now figure the Path Loss per band and see what you need
for transmitter power and receiver signal to noise ratio for a given
bandwidth. Go ahead. You professional amateurs can do it much
better than the people doing that for a living... :-)

>Wonder who'se got the program and keps to plan it all out?

Ask Rev. Jim. He has it down better than JPL. :-)

JPL has been doing it for about 35 years now. Wonder why
ARRL hasn't sent a team there to "confirm" it? Aren't amateurs
the "real pioneers" like the league says?

No sweaty-dah on code speed, though. Or "low power." With
those kinds of distances everyone can use all kinds of nifty
computer-assisted techniques sending communications below
the noise floor.

OOOPs! I said a no-no! CANNOT be done with nasty, evil
computerized techniques! That violates the sacred honor and

glory of ALL-MANUAL communications by morsemanship! Tsk on me! :-)

All hams MUST have manual morse, be tested on it, etc., so as to allow "hams in third-world countries to use simple ham gear to communicate." With Mars of course.

By golly, it just shows to go ya that JPL, those nasty academics and commercial folks don't know what they're doing by neglecting mighty macho morse! They've been doing it WRONG for 35 years!

Pasternak ought to put that in his ham newsline. Show them who's boss around radio!

>you remember that speed'o light means that radio signals take
>about 5 to 15 minutes one way to make the trip...

From Almanac figures, I calculate 3.05 to 22.3 minutes, depending
on planetary orbits. You are quite close for off-the-cuff calcs!

It gets worse. At farthest point a complete two-way would take
about 44 minutes...but the planetary rotations would inhibit any
direct path to something like 6 hours straight (just counting Earth
rotation, not Mars). That limits long QSOs to about 8 two-way
exchanges...which seems to be normal terrestrial contacts to
make "lifelong friends" via one QSO. :-)

A complete Martian "day" is 24 hours and 39 minutes, close to
Earth's "day" but, for part of the solar orbit, the control points
could be totally opposed to any direct path! [both planet station
locations could be on opposite sides]

I'll leave it up to the professional amateurs in here to calculate
the path losses and the effect of direct solar noise. At some
points in the planetary orbits, one or the other will be on opposite
sides of the sun, even eclipsed by it. Broadband solar RF noise
is fairly strong looking directly at it.

Terrestrial ionospheric effects of HF this is NOT! :-)

Author, engineer, and ham George O. Smith worked out the
losses and needed transmitter powers back in the 1950s. It can
be done with 1 KW RF output transmitter but into a very
directional antenna of gains above 20 db...and running RTTY
with 850 cycle spread mark-space with vacuum tube equipment.

The pros and the academics worked it out, too, just as far back.
JPL and their DSN (Deep Space Network) did it no sweat back
3+ decades ago. They DO have the advantage of a DSN location
in Australia as well as one in the southwestern USA. I don't think
the FCC will allow telecommand and relay for hams in the same
way in the future. :-)

LenAnderson@ieee.org

[veteran of the first Mariners to Mars in the late 60s as well as
the ALSEP on the moon in the 60s and 70s]

I understand and admit my "mixing them up." Sorrow and abashment
is. [have to remember the Extra PCTA Double Standard in here]

Minor correction: Kellie put the pedal to the metal so's he could
"work CW" with a UK ham instead of having front porch fun on
prom night. [everyone to their own...] It is important to stress
"CW" since Kellie IS a PCTA. ["CW gets through when everything
else will"]

Interesting to note Kellie used the words "first new one." If that was
true, then he might have been working the ham bands illegally prior
to receipt of that might macho morsemanship certificate!

Whoa! Illegal ham band operation! Boggles the mind that a PCTA
would EVER do that! :-)

Oh, my, Kellie DOES get upset about a simple question! :-)

Did Kellie ever engage in any front porch prom night fun?

[just a question, all things considered here...:-)]

So, did Isabelle ever get her ham ticket?

Or didn't she "show enough interest in radio" for one?

"...the world wonders." - filler sentence on encrypted USN
Midway message.

This is an interesting point here. There are a lot of young people in
this country that enjoy each others company in that manner, and they do
not consider it sex. In fact they consider themselves virgins as long as
they don't do it in the traditional manner.

And the kids these days think THEY have it bad! hehehe

Standard Pub tactic. Every election they have a hot button topic, be it
School Prayer, Pledge of allegiance, Flag burning, etc. It is one of
those things that help to divert peoples attention away from issues that
should be debated during the campaign. All the above are perfectly fine
issues - discuss them after the election please!

>
>
> So it was OK that he fooled around but not OK that he got caught? I disagree!

Not to mention, it was not he who blabbed.

Don't forget that the whole thing opened up when a "nice" republican
lady that Monica thought was a friend went to the people that so badly
wanted to discredit him. So she didn't keep the indiscretion discreet.

For more on that:

http://abcnews.go.com/sections/GMA/GoodMorningAmerica/GMA_010220_Tripp.html

Two interesting things here.

This person is *surprised* that no one wants to hire her?

And the last paragraph quote is one of those that make you shake your
head in disbelief

> * Tripp accuses the White House, the Pentagon and two Pentagon
> * officials of violating the Privacy Act by releasing personal
> * information about her during the Lewinsky investigation.

AT LEAST *SHE* DIDN'T RELEASE ANY PRIVATE INFORMATION ABOUT ANYONE!!!!

BWAHAHAHAHA!

Oh... that's correct..... the other people were those evil democrats!
;^)

Bruce posted on R.R.A.P. for years and years. Every post had spelling
errors.

And for years and years, you said nothing.

When he
> did so, I found him to be an illiterate clod.

Well, it seems that the cat finally let go of your tongue, now that
Kim has made her exit.

No double standard at
> all.

A complete double-standard. As long as Bruce was making crude remarks
to Kim you were all for it.

> You can't show me one instance where I've ever agreed with anything
> posted by WA8ULX.

Your silence was Golden in making my point. Thank you.

Now, feel better about your ineptitude regarding the
> spelling of "privilege"?
>
> Dave K8MN

Not at all. I am not a perfect person, no matter much you want me to
be so.

Obviously. And Dave doesn't care what they do if it adds just one
more entry into his log.

I think his voice keyer is set up for: "CQ, CQ, Calling all Kids,
Lids, and Out-of-Band Frenchmen!"

Hi, hi!

All of this is *way* off topic for this NG and belongs in some
political discussion group. However...I think the USSR was defeated
primarily because communism as a system of government tends to ignore
the human nature of the governed as well as the political, social, and
economic conditions that exist at any given time.

Communism is at odds with religion - dooming it to failure because it
is human nature to look for answers to questions that science cannot
answer and thus only religion can provide.

Communism fails to reward productivity thus removing the incentive to
be productive. This leads to the economic failure of the system.

I'd have been impressed with the guy if he'd have simply had enough
cojones to say something like, "Yeah, she did it, it was great, eat
your heart out." Lying about it was definitely the worst part of the
whole affair as far as I'm concerned.

>I remember Clinton saying his role model was JFK. Well, JFK was allegedly
>involved with Marilyn Monroe, while WJC got Monica. Sigh.

Eisenhower was rumored to have been romantically linked (to be polite
about it) with a female sarge who drove his staff car...which would
not only be adultery but also violate military protocol since officers
aren't supposed to be romantically involved with enlisted personnel.

Kennedy supposedly had Marilyn Monroe, Clinton had Gennifer Flowers
and later Monica Lewinsky, while for Nixon, there was his dog
Checkers. (snicker)

For several years before the FCC abandoned its responsibilities by turning the function over to the VEs, there was a "pilot program" in several areas where the U S Civil Service Commission examiners gave the FCC written tests by prior arrangement at their regular exam points. This avoided the problem of finding a local ham and vetting his/her character before sending the exam. (The field office examiner was supposed to check with the local FCC investigators to find out whether the choice of proctor raised any "red flags".)

That program did not yield any better results than the previous mail-volunteer system and was ended.

>Really a sharp move by FCC - they get unpaid volunteers to do almost
>all of the grunt work, from coming up with questions for the pool to
>verifying CSCEs. Yet FCC retains all the authority and dictates
>procedure and the fees VEs can collect to reimburse their expenses.

The only ones "inside" who really wanted the work passed to the volunteers were those examiners who wanted to do less work (some, but certainly not all). The rest of us felt that it was a bad move, and would be the start of a very slippery slope of the FCC abandoning its regulatory responsibilities under the guise of "privatization". Replacing said examiners with more and different examiners with better work attitudes would have been a better solution.

The brass obviously had their minds made up before they even asked us about it.....and in fact it was the start of said "privitization" downhill spiral.

Now here we differ. Whatever problems "lack" of religion may cause are
overshadowed by the problems that religion *causes*. I am perfectly
happy to have religions coexist together - problem is, the religion's
adherants are often not.

> Communism fails to reward productivity thus removing the incentive to

Yup. It's a fatally flawed system.

Well yeah - he shouldn't have lied about it after things broke out. But
all that ignores a big, big problem. The Pubs had showed a willingness
to spend a huge amount of our - MY - tax dollars on wild goose chases,
including the Ken Starr fiasco in which they suddenly changed things
around after not being able to nab the prez on the S&L thing, to the
"blue dress BJ". I was just as embarrassed by their actions as I was by
the indiscretion itself.

Snicker.....

As opposed to Lennie's Lemming approach to why it should be
eliminated.

Of course Lennie doesn't have to worry about Amateur Radio since
he's NOT a member of it...

> >Len, there are those who out and out lie. It is a typical liberal
> >strategy to lie, and lying is OK so long as it has the desired
> >outcome. Yell Yell so obviously belongs in that category.
>

Of course you would. The two of you can go for 8 or 10 exchanges
patting each other on the back...Of course you ae the ONLY two patting
either one on the back....

> Agreed again!

Coming from a documented pathological liar, what does it REALLY
matter WHAT you think, Lennie? Whatever possible contributions you
COULD have made to Amateur Radio wilol forever be tarnished by your
conduct here.

> >> People like you and Lennie.
> >
> >People DO like me and Len. We're very likable guys.
>
> ...except to sociopaths and the PCTA.

I think you meant "ESPECIALLY" sociopaths, especially since the
two of you manifest the behaviour of such. (And yes, I DO have the
training to recognize it...unlike yourselves.)

Neither of you are very likeable. At least not to people who
prefer honest, trustworthy companions. Perhaps that's why the
back-patting is between the two of you.

> >> People can have differing opinions and not have to resort to the kinds
> of

> >
> >Len, I think Yell Yell is crying, "Liar, liar, pants on fiar" again.
> >Of course, he lies.
>
> Very much agreed.

Of course you can't provide a reference to where I have lied.

Now in YOUR respective cases...we have REAMS of stuff. No use
rehashing all that, though. Neither one of you possess a redeemable
character.

> >> Sucks to be you.
> >
> >Oy vey. Whatta potty mouth. Where's that bar of Lie Soap?
>
> It's "lieing" on the laundry room shelf...where the schmuck last
> left it yesterday.

You must be thinking of your OTHER lying friend, Mark Morgan, the
liberated gay pagan Chemical Corps officer who was drafted at age 8
and wasn't allowed to resign his commission despite being illiterate
(refering to mistruthfulness as "lieing" too often to count) and
openly deviant...

He agreed with you too, Lennie. I know he'd be the first one I'd
want on MY "side"...(uuuuuhhhhhhh...yeeeeeeeeah....RIGHT!)

Great company you keep.

So let's take a closer look at Lennie and Company since Lennie has been so anxious lately to belittle, as a group, those he considers unwashed masses...

Openly contemptful of Amateur Radio in all forms despite professing "admiration" for it. Accuses others of trying to abridge his "freedom of speech", yet filed no fewer than 14 "reply comments" to various NPRM's directly attacking each respondent.

Has insisted that there are radio services specifically established for "recreational" communicaitons but won't provide the references.

Promised to get his "Extra Lite out of the box" but hasn't done that.

Insisted he was going to build a Part 15 legal transmitter on Amateur alocations yet hasn't done that.

Belittles others for using "diminutive" names addressing him, insists he doesn't do that and insists he is a "professional"...however the NG is rife with his own use of diminutive names for people who go out of thier way to be nice, even respectful, of him.

Liberally analogizes others with the Nazi party.

Harrangues others he perceives as insulting his profesional "accomplishments", but also goes out of HIS way to insult others who do not similarly "insult" him.

Frequently calls others "potty mouth" while using blatant profanity.

Has attempted, unsuccessfully, to link his rear-area radio station clerk duties with those of Soldiers who died in combat three years before he was even in the Armed Forces. That in itself makes him a contemptable pig in my not-so-humble opinion.

Insists on making "diagnosis" of alleged mental health issues in others, yet refuses to present his credentials in ANY health care discipline.

And let's not forget his critiques of various volunteer organizations, yet Lennie has absolutely ZERO experience in ANY such organizations. Some criticisms going back to his childhood accusations of the ineptness of the Civil Defense programs...(OF course Lennie ALSO takes great liberties with criticism of ANY person who dares to comment on any thing that occured before THEY reached puberty...but it's OK for LENNIE to do! ! !)

There's lot's more for Lennie, but let's move on...

There's Brian P. Burke. Lennie's padawan learner. Insists that he himself has operated from several exotic DX locations, but when asked to provide some validation of his claims insists his logs are stored...He's not really sure since on several different occassions he's insisted the logs were in one location or another.

What IS certain is that he's never operated Amateur Radio from Somalia.

Brian has also gone out on a limb by expressing "admiration" for Lennie Anderson. Forget that Lennie has already been thoroughly documented as untruthful, and pathologically so. One would have to wonder about Brian's character from that one faux pas alone.

Then he goes on to insist that "unlicensed devices play a major role in emergency comms". Of course when pressed to provide some example of his assertion, he redirects to the use of diminutives and profanities. Wonder where he got THAT from. Probably his one short stint with an AFMARS Base Support Team 10 years ago...Guess they used a pair of old LaFayette CB channel 14 walkie-talkies for "support..."

There's more, but before I forget to add him in, let's not forget another alleged "elecrtrical engineer", Vipul Shah. Ahhhhh, yes...Vippy. Posted for several months anonymously, himself making absurd suggestions of improprieties without any validation. That's when I "outted" him. Of course when I suggested that we contact some of the local Amateur Radio clubs to get THIER version of Vipul's allegations, Vippy then insists that they were clubs "not near my home".

It got even more absurd when Vippy announced he was "leaving engineering" since his family thought he was in a dishonorable profession...Granted that thgere are those like Leonard Anderson who BRING some dishonor to the good name of professional engineering, but the assertion itself was, on the face of it, pretty stupid.

Vippy them moved on to a new job that he was not allowed to discuss, however he did volunteer that his new "employer" told him it would probably put him in a "compromising" position with fellow employees.

Yeah, Lennie...That's some great company YOU keep...Mark Morgan, Brian Burke, Vipul Shah...And Let's not forget Grumwich, MegHz and other "anonymous" posters that seem to pop up when YOU "take a break"....

But wasn't the FCC, like all agencies at the time, under pressure to reduce
spending? Seems to me that getting unpaid volunteers to take over most of the
work of amateur license testing and test preparation would save some $$. Not
much, but it would be something the top dogs could point to and say "see -
we're saving money and getting the govt. off your back"...

Thread drift is par for the course here, John.

However...I think the USSR was defeated
>primarily because communism as a system of government tends to ignore
>the human nature of the governed as well as the political, social, and
>economic conditions that exist at any given time.

Agreed - but that's not inconsistent with what I wrote. Once the average Soviet
began to see what capitalism and freedom could do (in the form of things like
rock'n'roll and McDonald's) they wanted that stuff.

And it's not just 'communism' - it's any collectivist system that routinely
requires people to place the good of "society" or "the group" above their own.
>
>Communism is at odds with religion - dooming it to failure because it
>is human nature to look for answers to questions that science cannot
>answer and thus only religion can provide.

Depends what you mean by "communism". If you're talking about economic
capitalism ("workers own the means of production") there's no reason religion
and economic communism can't coexist. But if you're talking about ideological
communism, where the collective mindset is supposed to replace individual
logic, religion is incompatible because it may set up a different set of
values, ideals, and authority figures.

IOW, ideological communism sets itself up as the 'religion'. And in many ways
it's very similar: Many (not all) religions require blind acceptance of "items
of faith" - ideological communism requires unquestioning acceptance of what is
"the good of the people". Many (not all) religions say they are the *only* way
for humans to live morally - same with ideological communism.

Most of all, many religions require their adherents to "sacrifice" various
earthly delights because they are "wrong" or "for the good of others" - just
like ideological communism.

>
>Communism fails to reward productivity thus removing the incentive to
>be productive. This leads to the economic failure of the system.

All collectivist systems do that - some more than others. A nuclear family is a collectivist system of a sort. But in a healthy family, the rewards for productivity are not removed, though they may be delayed.

The best description I've seen of why collectivist systems fail is in "Atlas Shrugged" where the collapse of the Twentieth Century Motor Company is described - and the reasons for it.

Maybe. A BPL modem has to be across the AC line, which brings in a whole bunch
of safety issues.

>The big difference
>is that Wi-Fi should be able to handle much more bandwidth in the part
>between the individual Wi-Fi "modems" than the part between BPL
>"modems". Both use either the existing slice of radio spectra

>BPL fesses up to being a radiator and that laptop actually
>transmits a signal thru an antenna to be picked up by leaky
>nearby power wires being fed by a BPL system, and visa versa.
>Then the entire camel gets into the tent...).

Then it's not incidental radiation anymore, but intentional.

Another big difference is that a Wi-Fi modem bought here in EPA today can be
used all over the country if I sign up with the right provider. A BPL modem for
a particular system doesn't work on BPL systems by other companies.
>

Depends on the system. And the BPL injectors and extractors have to be
insulated to stand the MV distribution voltages. And the power line has to be
clean enough not to interfere with BPL signals.

>issues - discuss them after the election please!

Fun facts:

- Before the whole Supreme Court case about school prayer, most public schools
in the USA *did not* have school prayers.

- The Pledge of allegiance as originally written *did not* include the words
"under God". They were added because the Knights of Columbus wanted them...

- The *correct* way to dispose of a US Flag is to burn it.

Uh huh.

You forget where I work.

There's an awful lot of young people who get treated for various sexually transmitted diseases who, in the same words of our former Commander-in-Chief, "weren't having sex".

Uh huh.

That's why I have 14, 15 and 16 year olds in the ER with herpes lesions in places where they shouldn't be...but are. "But we didn't have "sex"...it was just a B---j--." How can you tell kids otherwise about sex when they see thier parents essentially condoning those same acts by the President of the United States by NOT demanding his resignation?

>>And the kids these days think THEY have it bad! hehehe
>>
>*Every* generation thinks they invented it...

Probably, but then it's up to the preceeding geneeration to clan up the mess.

>- The *correct* way to dispose of a US Flag is to burn it.

Ahhhhhhh....Jim, why don't you qualify that with "in an honorable and respectful manner as prescribed by Public Law"...?!?!

Putting a match to Old Glory in order to make some ill defined political point is not "properly disposing" of the flag.

>>I think that the videos of the people leaving Saigon were one of the low
>>points of US history.
>
>And that happened under whose administration?

What does it matter, Jim?

It was what the American people (or at least the most VOCAL Americans) demanded thier government do. They demanded it from the Democrat that got them inot it, and they demanded it from the Republican who eventually DID get us out of it.

We can argue the reasons or the methodology that Lyndon Johnson used to get us into it until the cows come home, but to have not prosecuted it to win was the REAL tragedy. 50K+ Americans dead...for what? Hundreds of thousands, if not millions, of Vietnamese on both sides dead, too.

>Who, me?

Is Alfred E. Neuman ghostwriting today, Jim...?!?! =0

>I didn't write that. Clinton was not a great president, but he was
>light-years ahead of Nixon.

Sorry Jim...but we have to take a BIG difference of opinon here.

The Watergate scandal was nothing compared to the utter disprespect and dishonor Bill Clinton and his spouse brought to the White House.

Clinton lied about the LEGAL things he did before he ran for office. (Protesting against the war.) When he was caught, that SHOULD have been a clue to the rest of the country of what was about to come.

Hillary was supposed to set "healthcare" straight in this country.

All she did was spend a lot of the taxpayers money, sent the industry running for cover and gave Bill some pretty graphics in the form of a prototype "national health card" to flash at his first "State of the Union" address. That was the end of "National Health Care" for seven more years. She did not do one single thing to improve health care in the United States.

Nothing.

Hillary tore up the White House travel office, creating hate and discontent that did absolutely nothing to improve efficiency, cut costs or otherwise enhance the office.

They lied about White Water. He lied about his mistresses.

And on thier way out the door in 2001, they tried to STEAL things that they had been clearly told were NOT thiers for the taking.

Nixon lied about Watergate and the subsequent coverup, but the man had the intestinal fortitude, no matter how disgraced he was, to see what the results were doing the country, and he got out of the way. THAT took guts.

He was also the last president to have a balanced budget and opened the doors to China. He set in motion the wheels that Ronald Reagan would eventually use to grind the Soviet Union to a pulp.

>>> Because he cheated on his wife? Heck, look at what ol' Newt did to *his*
>>> first wife.
>>
>>But there was a difference, Jim. He's Republican. He was framed or
>>there was an invasion of privacy or something!
>
>Do you know what he did to his first wife?

Did it involve leather, Kool-whip and handcuffs? Was there video? Was it overheard and recorded by a scanner enthusiast?

>>Don't forget that the whole thing opened up when a "nice" republican
>>lady that Monica thought was a friend went to the people that so badly
>>wanted to discredit him. So she didn't keep the indiscretion discreet.
>
>Kinda dumb on Monica's part, don't ya think?

Yep. But who could "do" the president and not say SOMETHING to someone?

Who could "do" any famous person and not...?!?! If my oft repeated mid-life fantasy about a certain pop-diva ever did come true, you can bet your bottom dollar SOMEONE would know about it!

I would further say "someone I could trust". In my life there's only been TWO people I could invest that kind of secret to, and one of them certainly would NOT be pleased!

>>For more on that:
>>

>>This person is *surprised* that no one wants to hire her?
>
>Actually, given the way things often go in Washington, it *is* a bit
>surprising.

I wouldn't.

She was given what the other person thought was a private exchange between friends. She (Linda) violated it. True, what she did was "legal", and may or may not have been in the best interests of the United States, but could YOU
>>HONESTLY<< confide in Ms. Tripp...?!?

My best friend and I have exchanged confidences that have never gone any farther than our own ears...Because he IS my friend I feel I can tell him

things I wouldn't tell anyone else and vice versa. And I imagine that's exactly what Monica expected when she told Linda Tripp about scoring some presidential bootie. However Linda was an opportunist and she saw her opportunity.

So much for friends...At least in Washington.
